Fix it like a Pro
How to use this Service Manual

In the bookmarks to the left you will find different segments of this manual:

**Service Manual**
This is the standard manual for this vehicle. Use this segment as your major point of reference and information.

**Supplementary Service Manual** (if available)
These segments are updates and additions to the standard service manual. They are added as needed when certain changes are made to the model. Be sure to check these for additional information that may be lacking from the regular service manual.
HOW TO USE THIS MANUAL

This manual is intended as a handy, easy-to-read reference book for the mechanic. Comprehensive explanations of all installation, removal, disassembly, assembly, repair and check procedures are laid out with the individual steps in sequential order.

- The manual is divided into chapters and each chapter is divided into sections. The current section title is shown at the top of each page “1”.
- Sub-section titles “2” appear in smaller print than the section title.
- To help identify parts and clarify procedure steps, there are exploded diagrams “3” at the start of each removal and disassembly section.
- Numbers “4” are given in the order of the jobs in the exploded diagram. A number indicates a disassembly step.
- Symbols “5” indicate parts to be lubricated or replaced. Refer to “SYMBOLS”.
- A job instruction chart “6” accompanies the exploded diagram, providing the order of jobs, names of parts, notes in jobs, etc.
- Jobs “7” requiring more information (such as special tools and technical data) are described sequentially.

---

CLUTCH

Removing the clutch cover

Order | job/Parts to remove | Qty | Remarks
--- | --- | --- | ---
1 | Engine oil | 1 | See page 14 for changing the engine oil
2 | Left side cover | 1 | General cleaner
3 | Left rear footrest assembly/Saddlebag rear footrest | 1 | See page 3 in general cleaner.
4 | Drive pulley cage | 1 | See page 1, 24, 32 and 66.
5 | Clutch cover | 1 | Disconnect.
6 | Clutch cover gasket | 1 | Disconnect.

Removing the clutch

1. Loosen + Clutch base nut “1”

NOTE:
While holding the clutch base “5” with the universal clutch holder “3”, loosen the clutch base nut “1”.

Universal clutch holder
69008-01271
TM-91002

2. Remove + Clutch base nut “1” + Clutch spring washer “5” + Washer “15” + Clutch base assembly “15”

NOTE:
There is a balancer damper between the clutch boss and the clutch plate. It is not necessary to remove the balancer damper unless there is excessive clutch chattering.

---

CLUTCH

Removing the left balancer drive gear

1. Loosen + Left balancer drive gear bolt “1”

NOTE:
While holding the generator cover “1” with the primary chain holder “3”, loosen the left balancer drive gear bolt.

Primary chain holder
69180-01761

Primary chain holder
69180-01884-A

---

Removing the primary drive gear

1. Loosen + Primary drive gear bolt “1”

NOTE:
While holding the generator cover “1” with the primary chain holder “3”, loosen the primary drive gear bolt.
SYMBOLS
The following symbols are used in this manual for easier understanding.

NOTE: The following symbols are not relevant to every vehicle.

1. Serviceable with engine mounted
2. Filling fluid
3. Lubricant
4. Special tool
5. Tightening torque
6. Wear limit, clearance
7. Engine speed
8. Electrical data
9. Engine oil
10. Gear oil
11. Molybdenum-disulfide oil
12. Wheel-bearing grease
13. Lithium-soap-based grease
14. Molybdenum-disulfide grease
15. Apply locking agent (LOCTITE®)
16. Replace the part

SPECIAL TOOLS
VEHICLE IDENTIFICATION NUMBER
The vehicle identification number “1” is stamped into the right side of the steering head pipe.

MODEL LABEL
The model label “1” is affixed to the frame under the rider seat. This information will be needed to order spare parts.
OUTLINE OF THE FI SYSTEM

The main function of a fuel supply system is to provide fuel to the combustion chamber at the optimum air-fuel ratio in accordance with the engine operating conditions and the atmospheric temperature. In the conventional carburetor system, the air-fuel ratio of the mixture that is supplied to the combustion chamber is created by the volume of the intake air and the fuel that is metered by the jet used in the respective carburetor.

Despite the same volume of intake air, the fuel volume requirement varies by the engine operating conditions, such as acceleration, deceleration, or operating under a heavy load. Carburetors that meter the fuel through the use of jets have been provided with various auxiliary devices, so that an optimum air-fuel ratio can be achieved to accommodate the constant changes in the operating conditions of the engine.

As the requirements for the engine to deliver more performance and cleaner exhaust gases increase, it becomes necessary to control the air-fuel ratio in a more precise and finely tuned manner. To accommodate this need, this model has adopted an electronically controlled fuel injection (FI) system, in place of the conventional carburetor system. This system can achieve an optimum air-fuel ratio required by the engine at all times by using a microprocessor that regulates the fuel injection volume according to the engine operating conditions detected by various sensors.

The adoption of the FI system has resulted in a highly precise fuel supply, improved engine response, better fuel economy, and reduced exhaust emissions.
The fuel pump delivers fuel to the fuel injector via the fuel filter. The pressure regulator maintains the fuel pressure that is applied to the fuel injector at only 392 kPa (3.92 kg/cm², 55.7 psi). Accordingly, when the energizing signal from the ECU energizes the fuel injector, the fuel passage opens, causing the fuel to be injected into the intake manifold only during the time the passage remains open. Therefore, the longer the length of time the fuel injector is energized (injection duration), the greater the volume of fuel that is supplied. Conversely, the shorter the length of time the fuel injector is energized (injection duration), the lesser the volume of fuel that is supplied. The injection duration and the injection timing are controlled by the ECU. Signals that are input from the throttle position sensor, crankshaft position sensor, intake air pressure sensor, air temperature sensor, engine temperature sensor, speed sensor and O₂ sensor enable the ECU to determine the injection duration. The injection timing is determined through the signals from the crankshaft position sensor. As a result, the volume of fuel that is required by the engine can be supplied at all times in accordance with the driving conditions.

Illustration is for reference only.
INSTRUMENT FUNCTIONS

Multi-function meter unit

WARNING

Be sure to stop the vehicle before making any setting changes to the multi-function meter unit.

The multi-function meter unit is equipped with the following:

- a speedometer (which shows the riding speed)
- a tachometer (which shows the engine speed)
- a fuel gauge
- an odometer (which shows the total distance traveled)
- two trip meters (which show the distance traveled since they were last set to zero)
- a fuel reserve trip meter (which shows the distance traveled on the fuel reserve)
- a clock
- a self-diagnosis device
- a brightness control mode

NOTE:

- Be sure to turn the key to “ON” before using the “SELECT” and “RESET” switches.
- To switch the odometer, the trip meters and the fuel reserve trip meter displays between kilometers and miles, press the “SELECT” switch for at least two seconds. (For USA and California only)

Speedometer

The speedometer shows the riding speed. When the key is turned to “ON”, the speedometer needle will sweep once across the speed range and then return to zero in order to test the electrical circuit.

Tachometer

The electric tachometer allows the rider to monitor the engine speed and keep it within the ideal power range. When the key is turned to “ON”, the tachometer needle will sweep once across the r/min range and then return to zero r/min in order to test the electrical circuit.
CAUTION: Do not operate the engine in the tachometer red zone.
Red zone: 5000 r/min and above

Fuel gauge
1. Fuel gauge
The fuel gauge indicates the amount of fuel in the fuel tank. The needle moves towards “E” (Empty) as the fuel level decreases. When the needle reaches “E”, approximately 3.0 L (0.79 US gal) (0.66 Imp.gal) remain in the fuel tank. If this occurs, refuel as soon as possible.
When the key is turned to “ON”, the fuel gauge needle will sweep once across the fuel level range and then return to the current amount in order to test the electrical circuit.
NOTE: 
- Do not allow the fuel tank to empty itself completely.
- The fuel gauge does not indicate the correct fuel level for the first 5 km/h (3 mi/h) after refueling.

Odometer, tripmeter, and clock modes
1. Odometer/tripmeter/fuel reserve tripmeter/clock
Push the “SELECT” switch to switch the display between the odometer mode “ODO”, the tripmeter modes “TRIP 1” and “TRIP 2” and the clock mode in the following order:  
ODO → TRIP 1 → TRIP 2 → Clock → ODO
If the fuel level warning light comes on, the odometer display will automatically change to the fuel reserve tripmeter mode “F-TRIP” and start counting the distance traveled from that point. In that case, push the “SELECT” switch to switch the display between the various tripmeter, odometer, and clock modes in the following order:
F-TRIP → TRIP 1 → TRIP 2 → Clock → ODO → F-TRIP
To reset a tripmeter, select it by pushing the “SELECT” switch, and then push the “RESET” switch for at least one second. If you do not reset the fuel reserve tripmeter manually, it will reset itself automatically, and the display will return to the prior mode after refueling and traveling 5 km (3 mi).

Clock mode
1. Clock
To set the clock:
1. Push the “SELECT” switch to change the display to the clock mode.
2. Push the “SELECT” and “RESET” switches together for at least two seconds.
3. When the hour digits start flashing, push the “RESET” switch to set the hours.
4. Push the “SELECT” switch, and the minute digits will start flashing.
5. Push the “RESET” switch to set the minutes.
6. Push the “SELECT” switch and then release it to start the clock.

Self-diagnosis device
This model is equipped with a self-diagnosis device for various electrical circuits.
If any of those circuits are defective, the engine trouble warning light will come on, and then the odometer/tripmeter/clock display will indicate a two-digit error code (e.g., 12, 13, 14). If the odometer/tripmeter/clock display indicates any error codes, note the code number, and then check the vehicle. Refer to "FUEL INJECTION SYSTEM" on page 7-27.

**CAUTION:**
If the display indicates an error code, the vehicle should be checked as soon as possible in order to avoid engine damage.

**Brightness control mode**

1. Turn the key to "OFF".
2. Push and hold the "SELECT" switch.
3. Turn the key to "ON", and then release the "SELECT" switch after five seconds. Item number "1" is displayed.

1. Multi-function meter unit panel
2. LCD
3. Brightness level

4. Adjust the multi-function meter unit panel brightness level by pushing the "RESET" switch.

5. Push the "SELECT" switch to select the LCD. Item number "2" is displayed. Adjust the LCD brightness level by pushing the "RESET" switch.

1. LCD
2. Item number
3. Brightness level

6. Push the "SELECT" switch to select the speedometer, tachometer, and the fuel gauge needles. Item number "3" is displayed. Adjust the brightness level of the speedometer, tachometer, and the fuel gauge needles by pushing the "RESET" switch.

1. Speedometer needle
2. Tachometer needle
3. Fuel gauge needle
4. Item number
5. Brightness level

7. Push the “SELECT” switch.
   The odometer/tripmeter/clock display will return to the prior mode.
PREPARATION FOR REMOVAL AND DISASSEMBLY

1. Before removal and disassembly, remove all dirt, mud, dust and foreign material.

2. Use only the proper tools and cleaning equipment. Refer to “SPECIAL TOOLS” on page 1-11.

3. When disassembling, always keep mated parts together. This includes gears, cylinders, pistons and other parts that have been “mated” through normal wear. Mated parts must always be reused or replaced as an assembly.

4. During disassembly, clean all of the parts and place them in trays in the order of disassembly. This will speed up assembly and allow for the correct installation of all parts.

5. Keep all parts away from any source of fire.

REPLACEMENT PARTS

Use only genuine Yamaha parts for all replacements. Use oil and grease recommended by Yamaha for all lubrication jobs. Other brands may be similar in function and appearance, but inferior in quality.

GASKETS, OIL SEALS AND O-RINGS

1. When overhauling the engine, replace all gaskets, seals and O-rings. All gasket surfaces, oil seal lips and O-rings must be cleaned.

2. During reassembly, properly oil all mating parts and bearings and lubricate the oil seal lips with grease.

LOCK WASHERS/PLATES AND COTTER PINS

After removal, replace all lock washers/plates “1” and cotter pins. After the bolt or nut has been tightened to specification, bend the lock tabs along a flat of the bolt or nut.
BEARINGS AND OIL SEALS
Install bearings and oil seals so that the manufacturer’s marks or numbers are visible. When installing oil seals “1”, lubricate the oil seal lips with a light coat of lithium-soap-based grease. Oil bearings liberally when installing, if appropriate.

CAUTION:
Do not spin the bearing with compressed air because this will damage the bearing surfaces.

CIRCLIPS
Before reassembly, check all circlips carefully and replace damaged or distorted circlips. Always replace piston pin clips after one use. When installing a circlip “1”, make sure the sharp-edged corner “2” is positioned opposite the thrust “3” that the circlip receives.
CHECKING THE CONNECTIONS

Check the leads, couplers, and connectors for stains, rust, moisture, etc.

1. Disconnect:
   - Lead
   - Coupler
   - Connector

2. Check:
   - Lead
   - Coupler
   - Connector
   Moisture → Dry with an air blower.
   Rust/stains → Connect and disconnect several times.

3. Check:
   - All connections
     Loose connection → Connect properly.

NOTE: If the pin “1” on the terminal is flattened, bend it up.

4. Connect:
   - Lead
   - Coupler
   - Connector

NOTE: Make sure all connections are tight.

5. Check:
   - Continuity
     (with the pocket tester)

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

NOTE:
- If there is no continuity, clean the terminals.
- When checking the wire harness, perform steps (1) to (3).
- As a quick remedy, use a contact revitalizer available at most part stores.
SPECIAL TOOLS

The following special tools are necessary for complete and accurate tune-up and assembly. Use only the appropriate special tools as this will help prevent damage caused by the use of inappropriate tools or improvised techniques. Special tools, part numbers or both may differ depending on the country. When placing an order, refer to the list provided below to avoid any mistakes.

NOTE:
- For U.S.A. and Canada, use part number starting with “YM-”, “YU-”, or “ACC-”.
- For others, use part number starting with “90890-”.

## Piston Specifications

### Piston-to-cylinder clearance
- **Range**: 0.025–0.050 mm (0.0010–0.0020 in)
- **Limit**: 0.15 mm (0.0059 in)

### Diameter D
- **Range**: 99.960–99.975 mm (3.9354–3.9360 in)
- **Height H**: 10.0 mm (0.39 in)

### Offset
- **Value**: 0.50 mm (0.0197 in)

### Piston pin bore inside diameter
- **Range**: 23.004–23.015 mm (0.9057–0.9061 in)
- **Limit**: 23.045 mm (0.9073 in)

### Piston pin outside diameter
- **Range**: 22.991–23.000 mm (0.9052–0.9055 in)
- **Limit**: 22.971 mm (0.9044 in)

### Piston-pin-to-piston-pin-bore clearance
- **Range**: 0.004–0.024 mm (0.00016–0.00094 in)
- **Limit**: 0.074 mm (0.00291 in)

## Piston Ring Specifications

### Top Ring
- **Ring Type**: Barrel
- **Dimensions (B × T)**: 1.20 × 3.80 mm (0.05 × 0.15 in)

### End gap (installed)
- **Range**: 0.20–0.35 mm (0.0079–0.0138 in)
- **Limit**: 0.55 mm (0.0217 in)

### Ring side clearance
- **Range**: 0.030–0.080 mm (0.0012–0.0032 in)
- **Limit**: 0.120 mm (0.0047 in)

### 2nd Ring
- **Ring Type**: Taper
- **Dimensions (B × T)**: 1.20 × 4.00 mm (0.05 × 0.16 in)

### End gap (installed)
- **Range**: 0.45–0.60 mm (0.0177–0.0236 in)
- **Limit**: 0.95 mm (0.0374 in)

### Ring side clearance
- **Range**: 0.030–0.070 mm (0.0012–0.0028 in)
- **Limit**: 0.120 mm (0.0047 in)

### Front brake
- **Type**: Dual disc brake
- **Operation**: Right hand operation

**Front disc brake**
- Disc outside diameter × thickness: 298.0 × 5.0 mm (11.73 × 0.20 in)
- Brake disc thickness limit: 4.5 mm (0.18 in)
- Brake disc deflection limit: 0.10 mm (0.0039 in)
- Brake pad lining thickness (inner): 5.5 mm (0.22 in)
  - Limit: 0.5 mm (0.02 in)
- Brake pad lining thickness (outer): 5.5 mm (0.22 in)
  - Limit: 0.5 mm (0.02 in)
- Master cylinder inside diameter: 14.00 mm (0.55 in)
- Caliper cylinder inside diameter: 27.00 mm (1.06 in)
- Caliper cylinder inside diameter: 30.23 mm (1.19 in)
- Recommended fluid: DOT 4

### Rear brake
- **Type**: Single disc brake
- **Operation**: Right foot operation
- **Brake pedal position**: 110.0 mm (4.33 in)

**Rear disc brake**
- Disc outside diameter × thickness: 320.0 × 6.0 mm (12.60 × 0.24 in)
- Brake disc thickness limit: 5.5 mm (0.22 in)
- Brake disc deflection limit: 0.15 mm (0.0059 in)
- Brake pad lining thickness (inner): 5.8 mm (0.23 in)
  - Limit: 0.8 mm (0.03 in)
- Brake pad lining thickness (outer): 5.8 mm (0.23 in)
  - Limit: 0.8 mm (0.03 in)
- Master cylinder inside diameter: 12.7 mm (0.50 in)
- Caliper cylinder inside diameter: 41.30 mm (1.63 in)
- Recommended fluid: DOT 4

### Steering
- **Steering bearing type**: Taper roller bearing
- **Lock to lock angle (left)**: 35.0 °
- **Lock to lock angle (right)**: 35.0 °

### Front suspension
- **Type**: Telescopic fork
- **Spring/shock absorber type**: Coil spring/oil damper
- **Front fork travel**: 130.0 mm (5.12 in)
- **Fork spring free length**: 273.9 mm (10.78 in)
  - Limit: 268.4 mm (10.57 in)
- **Collar length**: 230.0 mm (9.06 in)
- **Installed length**: 268.9 mm (10.59 in)
- **Spring rate K1**: 10.0 N/mm (57.1 lb/in) (1.02 kgf/mm)
- **Spring stroke K1**: 0.0–30.0 mm (0.00–1.18 in)
- **Spring rate K2**: 12.0 N/mm (68.5 lb/in) (1.22 kgf/mm)
- **Spring stroke K2**: 30.0–130.0 mm (1.18–5.12 in)
- **Inner tube outer diameter**: 46.0 mm (1.81 in)
- **Inner tube bending limit**: 0.2 mm (0.01 in)
- **Optional spring available**: No

GENERAL TIGHTENING TORQUE SPECIFICATIONS

This chart specifies tightening torques for standard fasteners with a standard ISO thread pitch. Tightening torque specifications for special components or assemblies are provided for each chapter of this manual. To avoid warpage, tighten multi-fastener assemblies in a crisscross pattern and progressive stages until the specified tightening torque is reached. Unless otherwise specified, tightening torque specifications require clean, dry threads. Components should be at room temperature.

A. Distance between flats
B. Outside thread diameter

**NOTE:**

- Tighten the connecting rod bolts to 15 Nm (1.5 m-kg, 11 ft-lb), and then tighten them further to reach the specified angle 125–135°.
- Install the crankcase stud bolts (M12) so that their installed length is 141.5 mm (5.57 in).
- Install the crankcase stud bolts (M10) so that their installed length is 70.5 mm (2.78 in).

* For XV19CTSV(C), XV19CTV(C) and XV19CTMV(C)

**NOTE:**

1. First, tighten the lower ring nut to approximately 52 Nm (5.2 m·kg, 37 ft·lb) with a torque wrench, then loosen the lower ring nut completely.
2. Retighten the lower ring nut to 18 Nm (1.8 m·kg, 13 ft·lb) with a torque wrench.

7. Throttle cable (accelerator cable)
8. Horn 1 lead
9. Horn 1
10. Rear brake light switch
11. Rear brake light switch lead

A. Cross the left and right handlebar switch leads. Either lead can be routed on top.

B. 70 mm (2.76 in)

C. 10–30°

D. Fasten the rear brake light switch lead with the plastic locking tie. Face the end of the plastic locking tie inward, and then cut off the excess end of the tie.

E. Make sure that there is no slack in the rear brake light switch lead in the area shown in the illustration.

F. Fasten the rear brake light switch lead with the plastic locking tie. Face the end of the plastic locking tie downward, and then cut off the excess end of the tie.
1. Main switch lead
2. Right handlebar switch lead
3. Wire harness
4. Left handlebar switch lead
5. Air temperature sensor lead
6. Front left turn signal/position light lead
7. Headlight lead
8. Front right turn signal/position light lead
9. Air temperature sensor
10. Main switch

A. Place the joint coupler behind the leads.
B. Place the sections of the handlebar switch leads that are not covered by their protective sleeves in the rear of the headlight housing.
C. Fasten the headlight leads, front turn signal/position light leads, and accessory light lead with the holders along the side of the headlight housing.
D. Place the headlight leads, front turn signal/position light leads, and accessory light lead near the base of the holder.
E. 30 mm (1.18 in)
F. Secure the plastic band by inserting the projection on the band into the hole in the headlight housing.
G. Face the end of the plastic band downward.
1. EXUP servo motor
2. Fuse box
3. Wire harness
4. Fuel outlet hose
5. Cylinder-#1 right spark plug cap
6. Cylinder-#1 right ignition coil
7. Cylinder-#2 intake air pressure sensor coupler
8. Fuel sender (fuel tank) coupler
9. Meter assembly coupler
10. Throttle cable
11. Front brake hose
12. Cylinder-#2 right spark plug cap
13. Cylinder-#1 left ignition coil
14. Clutch pipe
15. Neutral switch lead
16. Stator coil lead
17. Speed sensor lead
18. O2 sensor lead
19. EXUP cable
20. Cylinder-#1 right spark plug lead
21. Cylinder-#1 left spark plug lead
22. ISC (idle speed control) unit inlet hose
23. Cylinder-#2 ISC (idle speed control) unit outlet hose
24. Cylinder-#1 ISC (idle speed control) unit outlet hose
25. Sub-wire harness 3 coupler
26. Cylinder-#2 right spark plug lead
27. Sub-wire harness 4 coupler
28. Cylinder-#2 left spark plug lead

A. Fasten the cylinder-#1 left and right spark plug leads, fuel outlet hose, wire harness and the fuel tank damper with the plastic locking tie. Install the plastic locking tie in the rear slot of the fuel tank damper.

B. Fasten the fuel outlet hose, wire harness, and fuel tank damper with the plastic locking tie. Install the plastic locking tie in the front slot of the fuel tank damper and make sure that the end of the damper is aligned with the edge of the flat section on the outside of the frame.

C. Fasten the cylinder-#1 left and right ignition coil leads, engine temperature sensor lead, and throttle position sensor lead to the guide on the engine bracket (right upper side) with the plastic locking tie. Face the end of the plastic locking tie rearward, and then cut off the excess end of the tie.

D. Fasten sub-wire harness 2 with the plastic locking tie.

E. Align the positioning tape on the wire harness with the top of the frame.

F. 0–15 mm (0–0.59 in)

G. Route the throttle cables behind the front brake hose.

H. Make sure that the wire harness is not twisted between the fuel tank and the headlight assembly.

I. Position the cylinder-#2 left and right spark plug leads, sub-wire harness 2 coupler and sub-wire harness 4 coupler on top of the guide.

J. Fasten the wire harness and the cylinder-#2 left and right spark plug leads with a plastic locking tie, making sure to install the tie just past the end of the protective tube of the wire harness. Face the end of the plastic locking tie inward, and then cut off the excess end of the tie.

K. To the throttle position sensor

L. To the fuel injector and engine temperature sensor

M. To the neutral switch

N. To the speed sensor

O. Fasten the stator coil lead with the plastic locking ties. Face the end of each plastic locking tie outward, and then cut off the excess end of the tie.

P. To the rear brake caliper

Q. Install the O2 sensor coupler completely onto the O2 sensor bracket.

R. Outside of the frame

S. Position the buckle of the plastic locking tie to the inside of the frame. Face the end of the plastic locking tie upward, and then cut off the excess end of the tie.

T. Inside of the frame

U. Position the buckle of the plastic locking tie to the inside of the frame.

V. To the wire harness

W. To the cylinder-#2 right spark plug

X. Right side

Y. Position the sub-wire harness 3 coupler and the sub-wire harness 4 coupler between the cylinder-#2 right spark plug lead and the cylinder-#1 ISC unit outlet hose.

Z. Face the ends of the hose clamp outward, angled 45° downward.

AA. Route the cylinder-#2 right spark plug lead under the sub-wire harness 4.

AB. Face the ends of the hose clamp downward.

AC. Route the cylinder-#2 left spark plug lead under the cylinder-#2 ISC unit outlet hose.

AD. Left side

AE. To the cylinder-#2 left spark plug

AF. Install the clutch pipe onto the clutch release cylinder, making sure that the pipe contacts the projection on the cylinder.

AG. To the O2 sensor

AH. Align the cutout in the clutch pipe union bolt cap with the projection on the clutch release cylinder.
CABLE ROUTING
1. Clutch hose

31. Starter relay
32. EXUP servo motor
33. EXUP cable
34. Speed sensor lead
35. Wire harness
36. Canister

A. Route the throttle cables to the inside of the clutch hose.
B. Pass the cylinder-#2 left spark plug lead through the guide.
C. 30–40 mm (1.18–1.57 in)
D. Position the buckle of the plastic locking tie to the inside of the frame.
E. Fasten the crankshaft position sensor lead, neutral switch lead, and sidestand switch lead with the holders.
F. Fasten the starter motor lead, speed sensor lead, and wire harness with the holders.
G. Route sub-wire harness 1 to the inside of the frame.
H. To the tail/brake light
I. Fasten the starter motor lead, horn 1 lead, rear brake light switch lead, sidestand switch lead, and crankshaft position sensor lead with the plastic locking tie.
J. Make sure that there is no slack in the stator coil lead and rectifier/regulator lead in the area shown in the illustration.
K. Fasten the stator coil lead and rectifier/regulator lead with the plastic locking tie. Face the end of the plastic locking tie outward, and then cut off the excess end of the tie.
L. Fasten the lean angle sensor lead, starter motor lead, horn 1 lead, rear brake light switch lead, and sidestand switch lead with the holder.
M. Route the starter motor lead, horn 1 lead, rear brake light switch lead, and sidestand switch lead to the inside of the frame boss.
N. Fasten the starter motor lead, horn 1 lead, rear brake light switch lead, and sidestand switch lead with the plastic locking tie. Face the end of the plastic locking tie outward, and then cut off the excess end of the tie.
O. Fasten the starter motor lead, horn 1 lead, rear brake light switch lead with the plastic locking tie, and then face the end of the tie outward. Be sure to install the plastic locking tie behind the frame cross member and to fasten the rear brake light switch lead at the white tape.
P. Route the starter motor lead, horn 1 lead, and rear brake light switch lead along the frame in the area shown in the illustration, making sure not to cross the leads.
Q. Align the positioning tape on the starter motor lead with the engine mounting bolt (front lower side).
R. Pass the fuel tank breather/overflow hose through the horn 1 bracket, making sure to position the end of the hose as shown in the illustration.
S. Fasten the starter motor lead, horn 1 lead, rear brake light switch lead with the plastic locking tie, and then face the end of the tie inward.
T. Fasten the horn 1 lead, rear brake light switch lead, and starter motor lead with the plastic locking tie. Face the end of the plastic locking tie inward, and then cut off the excess end of the tie.
U. Route the horn lead 1 to the rear of the starter motor lead.
V. Pass the throttle cables through the cable guides as shown in the illustration.
W. Pass the plastic locking tie through the hole in the battery box projection, and then fasten the wire harness with the tie.
X. Fasten the stator coil lead at the white tape with the plastic locking tie.
Y. Fasten the stator coil lead with the plastic locking ties.
Z. Pass the plastic locking tie through the hole in the battery box projection, and then fasten the wire harness with the tie.
AA. Route the wire harness along the side of the fuse box/starter relay bracket.
AB. For California only
AC. Route the horn lead 1 to the rearward of the canister.
1. Meter assembly coupler  
2. Cylinder-#2 intake air pressure sensor coupler  
3. Cylinder-#1 right spark plug cap  
4. Wire harness  
5. Negative battery lead  
6. EXUP servo motor  
7. Fuse box  
8. Starter motor lead  
9. Positive battery lead  
10. Sub-wire harness 1  
11. ECU (electronic control unit)  
12. Cylinder-#1 left spark plug cap  
13. Cylinder-#1 intake air pressure sensor coupler  
14. Fuel sender (fuel tank) coupler  
15. Neutral switch lead  
16. Sidestand switch lead  
17. Crankshaft position sensor lead  
18. Speed sensor lead  
19. Fuel hose (fuel tank to fuel hose joint)  
20. Fuel return hose (fuel return pipe to sub-fuel tank)  
21. Air vent hose (fuel pump to fuel hose joint)  
22. Fuel outlet hose  
23. Frame  
24. Oil tank  
25. Sub-fuel tank  
26. Battery  
27. Main fuse  
28. Fuel pump lead  

A. Do not pinch the leads between the fuel tank bracket and the frame when installing the bracket.  
B. Pass the plastic locking ties through the holes in the frame damper, and then fasten the wire harness and damper with the ties. Face the end of each plastic locking tie upward, and then cut off the excess end of the tie.  
C. Align the white tape on the wire harness with the frame cross member.  
D. 20 mm (0.79 in)  
E. Fasten the wire harness with the plastic locking tie. Face the end of the plastic locking tie upward, and then cut off the excess end of the tie.  
F. Route the wire harness along the frame.  
G. Fasten the wire harness with the plastic locking tie, making sure to align the tie with the line on the rubber damper. Face the end of the plastic locking tie upward, and then cut off the excess end of the tie.  
H. Connect the ECU couplers, and then fasten the ECU with the band.  
I. Fasten the fuel return hose (fuel return pipe to sub-fuel tank) with the plastic locking tie. Face the end of the plastic locking tie inward, and then cut off the excess end of the tie.  
J. Fasten the fuel tank damper with the plastic locking tie. Install the plastic locking tie in the middle slot of the fuel tank damper.  
K. Fasten the air filter case damper with the plastic locking tie so that the rubber part of the damper contacts the frame. Be sure to pass the plastic locking tie between the air filter case damper and the frame.  
L. Route the crankshaft position sensor lead, sidestand switch lead, neutral switch lead, starter motor lead and speed sensor lead under the fuel outlet hose.  
M. Inside of frame  
N. Outside of frame  
O. View with tray removed  
P. Route the negative battery lead under the starter motor lead and battery positive lead.  
Q. Route the positive battery lead (main fuse to starter relay) over the tray.  
R. Route the negative battery lead towards the front of the vehicle.  
S. Route the positive battery lead (battery to starter relay) under the tray.  
T. View with tray installed  
U. To the tail/brake light  
V. View with ECU removed  
W. Wrap the protective covering around the couplers (crankshaft position sensor coupler, auxiliary DC coupler, neutral switch coupler, sub-wire harness 1 coupler, speed sensor coupler, and sidestand switch coupler) and the wire harness.  
X. When installing the ECU, be sure not to pinch the leads in the areas shown in the illustration with oblique lines.
1. Fuel tank breather hose
2. Fuel sender (fuel tank)
3. Fuel tank
4. Fuel hose (fuel tank to fuel hose joint)
5. Fuel return hose (fuel return pipe to sub-fuel tank)
6. Air vent hose (fuel hose joint to fuel tank)
7. Fuel hose joint
8. Fuel outlet hose
9. Fuel pump
10. Sub-fuel tank
11. Fuel hose (fuel hose joint to fuel pump)
12. Fuel return pipe
13. Fuel return hose (pressure regulator to fuel return pipe)
14. Pressure regulator
15. Rollover valve 1
16. Rollover valve 2
17. Cylinder-#2 left spark plug lead
18. Rollover valve hose 1
19. Rollover valve hose 2
20. Starter motor lead
21. Fuel tank breather/overflow hose
22. Rollover valve hose 4
23. Rollover valve hose 3
24. Air vent hose (fuel pump to fuel hose joint)
25. Fuel pump coupler
26. Canister purge hose (for California only)
27. Canister (for California only)
28. Canister breather hose (for California only)

A. Align the blue paint mark on the fuel hose (fuel hose joint to fuel tank) with the round indentation on the bend in the fuel hose joint.
B. Face the fastener of the clamp downward, making sure that the projections on the clamp are positioned as shown in the illustration.
C. Align the white paint mark on the end of the fuel return hose (fuel return pipe to sub-fuel tank) with the white paint mark on the fuel return pipe.
D. Align the paint marks on the hoses with the hose joint as shown in the illustration.
E. Fasten the fuel tank breather/overflow hose to the throttle cable guide with the holder.
F. Align the paint mark on the hose with the hose joint as shown in the illustration.
G. Fasten the fuel tank breather/overflow hose and starter motor lead with the holder.
H. To the fuel injector
I. Align the yellow paint mark on the air vent hose (fuel hose joint to fuel tank) with the round indentation on the bend in the fuel hose joint.
J. Face the fastener of the clamp to the left.
K. Face the ends of the hose clamp forward.
L. Install the air vent hose (fuel pump to fuel hose joint) with its white paint mark facing upward.
M. Face the ends of the hose clamp upward.
N. Face the fastener of the clamp upward, making sure that the projections on the clamp are positioned as shown in the illustration.
O. Install the fuel hose (fuel tank to fuel hose joint) with its white paint mark facing downward.
P. To the pressure regulator
Q. Install the air vent hose (fuel hose joint to fuel tank) with its white paint mark facing downward.
R. For California only
S. To the fuel tank
T. To the intake manifold assembly
U. Fasten the canister purge hose and fuel tank breather/overflow hose with the holder, making sure to align the paint mark on the breather/overflow hose with the holder.
V. Fasten the canister purge hose and throttle cable guide with the holder.
1. Cylinder-#1 intake air pressure sensor
2. Cylinder-#1 intake air pressure sensor hose
3. Air filter case breather hose 1
4. Fuel hose (intake manifold assembly to pressure regulator)
5. Pressure regulator
6. Air filter case breather hose 2
7. Canister purge hose (for California only)
8. ISC (idle speed control) unit inlet hose
9. Canister (for California only)
10. Fuel tank breather/overflow hose (for California only)
11. Cylinder-#2 ISC (idle speed control) unit outlet hose
12. ISC (idle speed control) unit
13. Cylinder-#1 ISC (idle speed control) unit outlet hose
14. Cylinder-#2 intake air pressure sensor
15. Cylinder-#1 intake air pressure sensor hose
16. Fuel outlet hose
17. Cylinder head breather hose
18. Hose joint cover
19. Throttle position sensor
20. Cylinder-#1 injector coupler
21. Engine temperature sensor coupler
22. Sub-wire harness 2

A. Face the ends of the hose clamp to the left, angled 45° rearward.
B. Install the cylinder-#1 intake air pressure sensor hose onto the throttle body pipe up to the bend in the pipe, making sure to face the white paint mark on the hose upward. Face the ends of the hose clamp forward.
C. Fasten the canister purge hose and the air filter case breather hose 2 with the hose clamp, making sure to face the ends of the clamp upward (for California only).
D. Face the ends of the hose clamp to the left.
E. Fasten the canister purge hose and fuel tank breather/overflow hose with the holder 70 mm (2.76 in) from the hose joints on the canister (for California only).
F. Install the cylinder-#2 intake air pressure sensor hose onto the throttle body pipe up to the bend in the pipe, making sure to face the white paint mark on the hose upward. Face the ends of the hose clamp rearward.
G. Install the canister purge hose onto the throttle body pipe up to the bend in the pipe, making sure to face the white paint mark on the hose upward (for California only).
H. Face the ends of the hose clamp rearward, angled to the left.
I. Align the white paint marks.
J. Align the yellow paint marks.
K. Route the canister purge hose over the air filter case joint clamp screw.
1. Cylinder-#1 intake air pressure sensor
2. Cylinder-#2 intake air pressure sensor hose
3. Cylinder-#2 intake air pressure sensor
4. ISC (idle speed control) unit coupler
5. ISC (idle speed control) unit
6. Rollover valve 1
7. Rollover valve 2
8. ISC (idle speed control) unit inlet hose
9. Cylinder-#1 ISC (idle speed control) unit outlet hose
10. Cylinder-#2 ISC (idle speed control) unit outlet hose
11. Hose joint
12. Air filter case breather hose 2
13. Throttle position sensor
14. Throttle body assembly
15. Cylinder-#1 intake air pressure sensor hose
16. Cylinder head breather hose
17. Cylinder-#2 left ignition coil
18. Cylinder-#2 right ignition coil
19. Sub-wire harness 4

A. Face the ends of the hose clamp inward.
B. Face the ends of the hose clamps outward.
C. Install the cylinder-#2 ISC (idle speed control) unit outlet hose (hose joint to intake manifold assembly) completely onto the intake manifold, making sure to face the green paint mark on the hose to the left. Face the ends of the hose clamp outward, angled 45° forward.
D. Install the cylinder-#1 ISC (idle speed control) unit outlet hose (hose joint to intake manifold assembly) completely onto the intake manifold, making sure to face the blue paint mark on the hose to the left.
E. Face the ends of the hose clamp upward.
F. Position the sub-wire harness 4 coupler on top of the guide.
G. To the wire harness
H. Install the cylinder-#1 ISC (idle speed control) unit outlet hose onto the ISC unit pipe, making sure to align the blue paint mark on the hose with the blue paint mark on the pipe.
I. Install the ISC (idle speed control) unit inlet hose onto the ISC unit pipe, making sure to align the white paint mark on the hose with the white paint mark on the pipe.
J. Install the cylinder-#2 ISC (idle speed control) unit outlet hose onto the ISC unit pipe, making sure to align the green paint mark on the hose with the green paint mark on the pipe.

INTRODUCTION
This chapter includes all information necessary to perform recommended checks and adjustments. If followed, these preventive maintenance procedures will ensure more reliable vehicle operation, a longer service life and reduce the need for costly overhaul work. This information applies to vehicles already in service as well as to new vehicles that are being prepared for sale. All service technicians should be familiar with this entire chapter.

PERIODIC MAINTENANCE CHART FOR THE EMISSION CONTROL SYSTEM

</table>

* Since these items require special tools, data and technical skills, have a Yamaha dealer perform the service.
NOTE:
From 24000 mi (37000 km) or 36 months, repeat the maintenance intervals starting from 8000 mi (13000 km) or 12 months.

NOTE:
- **Air filter**
  - This model’s air filter is equipped with a disposable oil-coated paper element, which must not be cleaned with compressed air to avoid damaging it.
  - The air filter element needs to be replaced more frequently when riding in unusually wet or dusty areas.
- **Hydraulic brake and clutch systems**
  - After disassembling the brake or clutch master cylinders, caliper cylinders or clutch release cylinder, always change the fluid. Regularly check the brake and clutch fluid levels and fill the reservoirs as required.
  - Replace the oil seals on the inner parts of the brake or clutch master cylinders, caliper cylinders and clutch release cylinder every two years.
  - Replace the brake and clutch hoses every four years or if cracked or damaged.
ADJUSTING THE VALVE CLEARANCE
The following procedure applies to all of the valves.

NOTE:
- The valve clearance is automatically adjusted by the hydraulic valve lifter. However, there are times when the valve clearance needs to be adjusted manually. If this is the case, adjust the clearance of the two maladjusted or worn valves using the adjusting screw on the rocker arm.

If clearance is on the slip side “1”, loosen the adjusting screw and bring the valve clearance “a” within specification. Check if the valve clearance “b” on the adjusting screw “2” side is within specification.

If clearance is on the adjusting screw “2” side, tighten the adjusting screw and bring the valve clearance “b” within specification.

- Valve clearance adjustment should be made on a cold engine, at room temperature.
- When the valve clearance is to be measured or adjusted, the piston must be at top dead center (TDC) on the compression stroke.

1. Remove:
   - Rider seat
   - Rider seat bracket assembly
     Refer to “GENERAL CHASSIS” on page 4-1.

   - Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   - Air filter case
     Refer to “GENERAL CHASSIS” on page 4-1.
   - Muffler
   - Exhaust pipes
     Refer to “ENGINE REMOVAL” on page 5-1.

2. Disconnect:
   - Spark plug caps

3. Remove:
   - Spark plugs

4. Remove:
   - Shift pedal assembly “1”

5. Remove:
   - Damper cover “1”
   - Damper “2”
   - Timing mark accessing screw “3”
   - Crankshaft end screw “4”

6. Remove:
   - Camshaft sprocket cover “1”

7. Remove:
   - Wire harness guide bolt “1”
8. Remove:
   • Fuel tank damper “1”
   • Cylinder head breather hose “2”
9. Disconnect:
   • Oil tank breather hose “3”
   • Fuel outlet hose “4”

10. Remove:
    • Front cylinder head cover “1”
    • Rear cylinder head cover “2”

NOTE:
Due to the small clearance between the frame and the rear cylinder head cover, the three bolts “3” cannot be removed when the cover is in place. Loosen the bolts, and then remove the cylinder head cover from the right side of the vehicle, making sure that the bolts do not scratch the rocker arms or other engine parts.

11. Measure:
    • Valve clearance
      Out of specification → Adjust.

<table>
<thead>
<tr>
<th>Valve clearance (cold)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intake</td>
</tr>
<tr>
<td>0.00–0.04 mm (0.0000–0.0016 in)</td>
</tr>
<tr>
<td>Exhaust</td>
</tr>
<tr>
<td>0.00–0.04 mm (0.0000–0.0016 in)</td>
</tr>
</tbody>
</table>

Piston #1 TDC (rear cylinder)

a. Turn the crankshaft counterclockwise.

b. When piston #1 is at TDC on the compression stroke, align the TDC mark “a” on the crankshaft position sensor rotor with the pointer “b” on the clutch cover.

c. Check the camshaft drive gear mark “c” position and camshaft driven gear mark “d” position as shown. If the marks are not aligned, turn the crankshaft counterclockwise 360 degrees and re-check step (b).
d. Measure the valve clearance with a thickness gauge.

### Piston #2 TDC (front cylinder)

a. Turn the crankshaft counterclockwise from the piston #1 TDC by 408 degrees.
b. When piston #2 is at TDC on the compression stroke, align the TDC mark “e” on the crankshaft position sensor rotor with the pointer “b” on the clutch cover.

c. Check the camshaft drive gear mark “c” position and camshaft driven gear mark “d” position as shown.

d. Measure the valve clearance with a thickness gauge.

### Adjust:

- **Valve clearance**

b. Insert a thickness gauge “2” between the end of the adjusting screw and the valve tip.

c. Turn the adjusting screw “3” in direction “a” or “b” with the tappet adjusting tool “4” until the specified valve clearance is obtained.

### Adjusting screw side | Slip side

<table>
<thead>
<tr>
<th>Direction</th>
<th>Adjusting Screw Side</th>
<th>Slip Side</th>
</tr>
</thead>
<tbody>
<tr>
<td>“a”</td>
<td>Valve clearance is increased.</td>
<td>Valve clearance is decreased.</td>

<tr>
<td>“b”</td>
<td>Valve clearance is decreased.</td>
<td>Valve clearance is increased.</td>
</tr>
</tbody>
</table>
d. Hold the adjusting screw to prevent it from moving and tighten the locknut to specification.

```
**Locknut (rocker arm adjusting screw)**
20 Nm (2.0 m·kg, 14 ft·lb)
```

```
**Tappet adjusting tool (4 mm)**
90890-04133
**Valve adjustment wrench 3 mm & 4 mm**
YM-08035-A
```

e. Measure the valve clearance again.
f. If the valve clearance is still out of specification, repeat all of the valve clearance adjustment steps until the specified clearance is obtained.

13. Install:
- All removed parts
  Refer to “CAMSHAFTS” on page 5-14.

**NOTE:**
For installation, reverse the removal procedure.

---

**SYNCHRONIZING THE THROTTLE BODIES**

**NOTE:**
Prior to synchronizing the throttle bodies, the valve clearance and the engine idling speed should be properly adjusted and the ignition timing should be checked.

1. Stand the vehicle on a level surface.

**NOTE:**
Place the vehicle on a suitable stand.

2. Remove:
- Rider seat
- Rider seat bracket assembly
  Refer to “GENERAL CHASSIS” on page 4-1.

- Cylinder-#1 ignition coil cover
  Refer to “ENGINE REMOVAL” on page 5-1.
- Fuel tank
  Refer to “FUEL TANK” on page 6-1.

3. Remove:
- Cylinder-#1 intake air pressure sensor bracket “1”
- Cylinder-#2 intake air pressure sensor bracket “2”

4. Disconnect:
- Cylinder-#1 intake air pressure sensor hose “1”
- Cylinder-#2 intake air pressure sensor hose “2”

5. Install:
- Hose “1” (Parts No.: 5JW-24311-00)
- 3-way joint “2” (Parts No.: 90413-05014)
- Vacuum gauge hose for #1 “3”
- Vacuum gauge hose for #2 “4”
- Cylinder-#1 intake air pressure sensor hose “5”
- Cylinder-#2 intake air pressure sensor hose “6”
- Vacuum gauge
- Tachometer

---

**Vacuum gauge**
90890-03094
**Carburetor synchronizer**
YU-44456
6. Install:
   • Fuel tank
     Refer to “FUEL TANK” on page 6-1.

7. Adjust:
   • Throttle body synchronization

   Start the engine and let it warm up for several minutes, and then let it run at specified engine idling speed.

   With throttle body #1 as standard, adjust throttle body #2 using the air screw “1” (for throttle body #2).

   After each step, rev the engine two or three times, each time for less than a second, and check the synchronization again.

   If the air screw was removed, turn the screw 3/4 turn in and be sure to synchronize the throttle body.

   The difference in vacuum pressure between two throttle bodies should not exceed 1.33 kPa (10 mmHg).

   Stop the engine and remove the measuring equipment.

   Adjust:
   • Throttle free play
     Refer to “ADJUSTING THE THROTTLE CABLE FREE PLAY” on page 3-8.

   Throttle cable free play
   4.0–6.0 mm (0.16–0.24 in)

   Prior to adjusting the throttle cable free play, the engine idling speed and throttle body synchronization should be adjusted properly.

   Check:
   • Throttle cable free play “a”
     Out of specification → Adjust.

   Throttle cable free play
   4.0–6.0 mm (0.16–0.24 in)

   Adjust:
   • Throttle cable free play
Loosen the locknut “1”.

Turn the adjusting nut “2” in direction “a” or “b” until the specified throttle cable free play is obtained.

Direction “a”
Throttle cable free play is increased.

Direction “b”
Throttle cable free play is decreased.

Tighten the locknut “1”.

WARNING
After adjusting the throttle cable free play, start the engine and turn the handlebar to the right and to the left to ensure that this does not cause the engine idling speed to change.

CHECKING THE SPARK PLUGS
The following procedure applies to all of the spark plugs.

1. Remove:
   - Rider seat
   - Rider seat bracket assembly
     Refer to “GENERAL CHASSIS” on page 4-1.
   - Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   - Air filter case
     Refer to “GENERAL CHASSIS” on page 4-1.

2. Disconnect:
   - Spark plug cap

3. Remove:
   - Spark plug

   CAUTION:
Before removing the spark plugs, blow away any dirt accumulated in the spark plug wells with compressed air to prevent it from falling into the cylinders.

4. Check:
   - Spark plug type
     Incorrect → Change.

   Manufacturer/model
   NGK/DPR8EA-9
   DENSO/X24EPR-U9

5. Check:
   - Electrode “1”
     Damage/wear → Replace the spark plug.
   - Insulator “2”
     Abnormal color → Replace the spark plug.
     Normal color is medium-to-light tan.

6. Clean:
   - Spark plug
     (with a spark plug cleaner or wire brush)

7. Measure:
   - Spark plug gap “a”
     (with a wire thickness gauge)
     Out of specification → Regap.

   Spark plug gap
   0.8–0.9 mm (0.031–0.035 in)

8. Install:
   - Spark plug

   Spark plug
   18 Nm (1.8 m·kg, 13 ft·lb)

   NOTE:
Before installing the spark plug, clean the spark plug and gasket surface.

9. Connect:
   - Spark plug cap
10. Install:
   - Air filter case
     Refer to “GENERAL CHASSIS” on page 4-1.
   - Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   - Rider seat bracket assembly
   - Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

EAS0700

CHECKING THE IGNITION TIMING

NOTE: Prior to checking the ignition timing, check the wiring connections of the entire ignition system. Make sure all connections are tight and free of corrosion.

1. Stand the vehicle on a level surface.
2. Remove:
   - Shift pedal assembly “1”

3. Remove:
   - Damper cover “1”
   - Damper “2”
   - Timing mark accessing screw “3”

4. Connect:
   - Timing light “1”
   - Tachometer

5. Check:
   - Ignition timing

850–950 r/min

a. Start the engine, warm it up for several minutes, and then let it run at the specified engine idling speed.

b. Check that pointer “a” on the clutch cover is within the firing range “b” on the crankshaft position sensor rotor.
   Incorrect firing range → Check the ignition system.

NOTE: The ignition timing is not adjustable.

6. Install:
   - Timing mark accessing screw
   - Damper
   - Damper cover

    Damper cover bolt
    10 Nm (1.0 m·kg, 7.2 ft·lb)

7. Install:
   - Shift pedal assembly “1”

    Shift pedal bolt
    18 Nm (1.8 m·kg, 13 ft·lb)
NOTE: Align the mark “a” on the shift pedal shaft with the slot in the shift pedal.

EAS20750
CHECKING THE ENGINE OIL LEVEL
1. Stand the vehicle on a level surface.

NOTE:
• Place the vehicle on a suitable stand.
• Make sure the vehicle is upright.

2. Start the engine, warm it up for approximately 15 minutes until the oil temperature rises to 60 °C (140 °F), and then turn it off.

3. Remove:
   • Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

4. Remove:
   • Dipstick “1”

5. Check:
   • Engine oil level
     The engine oil level should be between the minimum level mark “a” and maximum level mark “b”.
     Below the minimum level mark → Add the recommended engine oil to the proper level.

NOTE:
• Before checking the engine oil level, wait a few minutes until the oil has settled.
• Do not screw the dipstick in when inspecting the oil level.

EAS20780
CHANGING THE ENGINE OIL
1. Start the engine, warm it up for several minutes, and then turn it off.

2. Place a container under the engine oil drain bolts.

3. Remove:
   • Engine oil filler cap “1”
4. **Remove:**
   - Engine oil drain bolt (oil tank) “1” (along with the gasket)

5. **Remove:**
   - Engine oil drain bolts (crankcase) “1” (along with the gaskets)

6. **Drain:**
   - Engine oil (completely from the oil tank and crankcase)

7. If the oil filter cartridge is also to be replaced, perform the following procedure.

   a. Remove the oil filter cartridge “1” with an oil filter wrench “2”.

b. Lubricate the O-ring “3” of the new oil filter cartridge with a thin coat of engine oil.

**CAUTION:**
Make sure the O-ring “3” is positioned correctly in the groove of the oil filter cartridge.

c. Tighten the new oil filter cartridge to specification with an oil filter wrench.

---

**Oil filter cartridge**

17 Nm (1.7 m·kg, 12 ft·lb)

---

8. **Check:**
   - Engine oil drain bolt gaskets
     Damage → Replace.

9. **Install:**
   - Engine oil drain bolt (oil tank)
     (along with the gasket)

---

**Engine oil drain bolt (oil tank)**

43 Nm (4.3 m·kg, 31 ft·lb)

---

10. **Install:**
    - Engine oil drain bolts (crankcase)
      (along with the gaskets)

---

**Engine oil drain bolt (crankcase)**

43 Nm (4.3 m·kg, 31 ft·lb)

---

11. **Fill:**
    - Oil tank
      (with the specified amount of the recommended engine oil)
NOTE:

Pour the engine oil in two stages. First, pour in 2.5 L of oil, then start the engine and rev it 3 to 5 times. Stop the engine, and then pour in the remainder of the specified amount.

CAUTION:

When starting the engine make sure the dipstick is securely fitted into the oil tank.

12. Fill: (when engine is disassembled)
   • Crankcase and oil tank
     (with the specified amount of the recommended engine oil)

13. Install:
   • Engine oil filler cap

14. Start the engine, warm it up for several minutes, and then turn it off.

15. Check:
   • Engine
     (for engine oil leaks)

16. Check:
   • Engine oil level
     Refer to “CHECKING THE ENGINE OIL LEVEL” on page 3-11.

17. Check:
   • Engine oil pressure

   a. Slightly loosen the oil gallery bolts “1”.

b. Start the engine and keep it idling until engine oil starts to seep from the oil gallery bolts. If no engine oil comes out after one minute, turn the engine off so that it will not seize.

c. Check the engine oil passages, the oil filter cartridge and the oil pump for damage or leakage. Refer to “OIL PUMP” on page 5-95.

d. Start the engine after solving the problem(s) and check the engine oil pressure again.

e. Tighten the oil gallery bolts to specification.

Oil gallery bolt

10 Nm (1.0 m·kg, 7.2 ft·lb)

CHECKING THE TRANSFER GEAR OIL LEVEL

1. Stand the vehicle on a level surface.

   NOTE:

   • Place the vehicle on a suitable stand.
   • Make sure the vehicle is upright.

2. Remove:
   • Transfer gear oil check bolt “1”

3. Check:
   • Transfer gear oil level
     The transfer gear oil level should be up to the brim “1” of the hole.
     Below the brim → Add the recommended transfer gear oil to the proper level.
CAUTION: Do not allow foreign materials to enter the transfer gear case.

4. Install:
   • Transfer gear oil check bolt

Transfer gear oil check bolt
8 Nm (0.8 m·kg, 5.8 ft·lb)

CHANGING THE TRANSFER GEAR OIL
1. Remove:
   • Muffler
   • Exhaust pipes
   Refer to “ENGINE REMOVAL” on page 5-1.
2. Place a container under the transfer gear oil drain bolt.
3. Remove:
   • Straight plug “1”
   • Transfer gear oil drain bolt “2”
4. Drain:
   • Transfer gear oil
   (completely from the transfer gear case)
5. Check:
   • Transfer gear oil drain bolt gasket
   Damage → Replace.
6. Install:
   • Transfer gear oil drain bolt
   (along with the gasket)

Transfer gear oil drain bolt
18 Nm (1.8 m·kg, 13 ft·lb)

7. Fill:
   • Transfer gear case
   (with the specified amount of the recommended transfer gear oil)

     Quantity
     0.55 L (0.58 US qt) (0.48 Imp.qt)
     Quantity (disassembled)
     0.60 L (0.63 US qt) (0.53 Imp.qt)

8. Install:
   • Straight plug
9. Check:
   • Transfer gear oil level
   Refer to “CHECKING THE TRANSFER GEAR OIL LEVEL” on page 3-13.
10. Install:
    • Exhaust pipes
    • Muffler
    Refer to “ENGINE REMOVAL” on page 5-1.

CHECKING THE CLUTCH FLUID LEVEL
1. Stand the vehicle on a level surface.

   NOTE:
   Place the vehicle on a suitable stand.

2. Check:
   • Clutch fluid level
   Below the minimum level mark “a” → Add the recommended clutch fluid to the proper level.

   Recommended clutch fluid
   Brake fluid DOT 4
Use only the designated clutch fluid. Other clutch fluids may cause the rubber seals to deteriorate, causing leakage and poor clutch performance.

Refill with the same type of clutch fluid that is already in the system. Mixing clutch fluids may result in a harmful chemical reaction, leading to poor clutch performance.

When refilling, be careful that water does not enter the clutch fluid reservoir. Water will significantly lower the boiling point of the clutch fluid and could cause vapor lock.

Clutch fluid may damage painted surfaces or plastic parts. Therefore, always clean up any spilt clutch fluid immediately.

In order to ensure a correct reading of the clutch fluid level, make sure the top of the reservoir is horizontal.

Bleed the hydraulic clutch system whenever:
- the system was disassembled,
- a clutch hose was loosened or removed,
- the clutch fluid level is very low,
- clutch operation is faulty.

Be careful not to spill any clutch fluid or allow the clutch master cylinder reservoir to overflow.

When bleeding the hydraulic clutch system, make sure there is always enough clutch fluid before applying the clutch lever. Ignoring this precaution could allow air to enter the hydraulic clutch system, considerably lengthening the bleeding procedure.

If bleeding is difficult, it may be necessary to let the clutch fluid settle for a few hours. Repeat the bleeding procedure when the tiny bubbles in the hose have disappeared.

1. Bleed:
   - Hydraulic clutch system
     a. Add the recommended clutch fluid to the proper level.
     b. Install the clutch master cylinder reservoir diaphragm.
     c. Connect a clear plastic hose “1” tightly to the bleed screw “2”.
     d. Place the other end of the hose into a container.
     e. Slowly squeeze the clutch lever several times.
     f. Fully squeeze the clutch lever without releasing it.
     g. Loosen the bleed screw. This will release the tension and cause the clutch lever to contact the handlebar grip.
     h. Tighten the bleed screw and then release the clutch lever.
     i. Repeat steps (e) to (h) until all of the air bubbles have disappeared from the clutch fluid in the plastic hose.
     j. Tighten the bleed screw to specification.
     k. Add the recommended clutch fluid to the proper level. Refer to “CHECKING THE CLUTCH FLUID LEVEL” on page 3-14.
WARNING
After bleeding the hydraulic clutch system, check the clutch operation.

REPLACING THE AIR FILTER ELEMENT
1. Remove:
   • Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.
2. Remove:
   • Fuel tank
     Refer to “FUEL TANK” on page 6-1.
3. Remove:
   • Air filter case cover “1”
4. Remove:
   • Air filter element “1”
5. Check:
   • Air filter element
     Damage → Replace.
   • Air filter case
     Damage → Replace.
   • Air filter case cover
     Damage → Replace.
6. Install:
   • Air filter case cover

CAUTION:
Never operate the engine without the air filter element installed. Unfiltered air will cause rapid wear of engine parts and may damage the engine. Operating the engine without the air filter element will also affect the throttle body synchronization, leading to poor engine performance and possible overheating.

NOTE:
When installing the air filter element into the air filter case, make sure that the sealing surfaces are aligned to prevent any air leaks.

7. Install:
   • Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   • Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

CHECKING THE THROTTLE BODY JOINTS
The following procedure applies to all of the throttle body joints and intake manifolds.
1. Remove:
   • Rider seat
   • Rider seat bracket assembly
     Refer to “GENERAL CHASSIS” on page 4-1.
   • Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   • Air filter case
     Refer to “GENERAL CHASSIS” on page 4-1.
2. Check:
   • Throttle body joints “1”
     Cracks/damage → Replace.

3. Install:
   • Air filter case
     Refer to “GENERAL CHASSIS” on page 4-1.
   • Fuel tank
     Refer to “FUEL TANK” on page 6-1.
   • Rider seat bracket assembly
   • Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

CHECKING THE FUEL LINE
The following procedure applies to all of the fuel, air vent and breather hoses.
1. Remove:
   • Rider seat
• Rider seat bracket assembly
  Refer to "GENERAL CHASSIS" on page 4-1.
• Fuel tank
  Refer to "FUEL TANK" on page 6-1.

2. Check:
• Fuel hoses “1”
• Air vent hose “2”
• Breather hose “3”
  Cracks/damage → Replace.
  Loose connection → Connect properly.

ECA14940
CAUTION:
Make sure the fuel tank breather hose is routed correctly.

3. Install:
• Fuel tank
  Refer to "FUEL TANK" on page 6-1.
• Rider seat bracket assembly
• Rider seat
  Refer to "GENERAL CHASSIS" on page 4-1.

2. Check:
• Cylinder head breather hose “1”
  Cracks/damage → Replace.
  Loose connection → Connect properly.

ECA14920
CAUTION:
Make sure the cylinder head breather hose is routed correctly.

3. Install:
• Air filter case
  Refer to "GENERAL CHASSIS" on page 4-1.
• Fuel tank
  Refer to "FUEL TANK" on page 6-1.
• Rider seat bracket assembly
• Rider seat
  Refer to "GENERAL CHASSIS" on page 4-1.

EAS21060
CHECKING THE OIL TANK BREATHER HOSE
1. Remove:
• Right side cover
  Refer to "GENERAL CHASSIS" on page 4-1.

2. Check:
• Oil tank breather hose “1”
  Cracks/damage → Replace.
  Loose connection → Connect properly.

ECA14930
CAUTION:
Make sure the oil tank breather hose is routed correctly.
3. Install:
• Right side cover
  Refer to “GENERAL CHASSIS” on page 4-1.

**CHECKING THE EXHAUST SYSTEM**
The following procedure applies to all of the exhaust pipes and gaskets.
1. Check:
   • Front exhaust pipe “1”
   • Rear exhaust pipe “2”
   • Muffler “3”
   • Muffler bracket “4”
     Cracks/damage → Replace.
   • Gaskets “5”
     Exhaust gas leaks → Replace.
2. Check:
   Tightening torque
   • Front exhaust pipe nuts “6”
   • Front exhaust pipe and rear exhaust pipe bolt “7”
   • Rear exhaust pipe nuts “8”
   • Rear exhaust pipe and muffler bolt “9”
   • Muffler and muffler bracket bolts “10”
   • Muffler bracket and frame bolts “11”

**Front exhaust pipe nut**
20 Nm (2.0 m·kg, 14 ft·lb)

**Front exhaust pipe and rear exhaust pipe bolt**
20 Nm (2.0 m·kg, 14 ft·lb)

**Rear exhaust pipe nut**
24 Nm (2.4 m·kg, 17 ft·lb)

**Rear exhaust pipe and muffler bolt**
20 Nm (2.0 m·kg, 14 ft·lb)

**Muffler and muffler bracket bolt**
29 Nm (2.9 m·kg, 21 ft·lb)

**Muffler bracket and frame bolt**
53 Nm (5.3 m·kg, 38 ft·lb)

**CHECKING THE CANISTER (for California only)**
1. Remove:
   • Horn 1
     Refer to “THROTTLE BODIES” on page 6-6.
2. Check:
   • Canister “1”
   • Canister purge hose “2”
   • Canister breather hose “3”
   • Fuel tank breather/overflow hose “4”
     Cracks/damage → Replace.
3. Install:
   • Horn 1
     Refer to “THROTTLE BODIES” on page 6-6.

**ADJUSTING THE EXUP CABLES**
1. Remove:
   • EXUP valve pulley cover “1”
2. Check:
   • EXUP system operation
   a. Turn the main switch to “ON”.
   b. Check that the EXUP valve operates properly.

   **NOTE:**
   Check that the projection “a” on the EXUP valve pulley contact the stopper “b” (fully-open position) and the stopper “c” (fully-closed position).

3. Check:
   • EXUP cable free play (at the EXUP valve pulley) “a” and “b”

   **EXUP cable free play (at the EXUP valve pulley)**
   a: 3 mm (0.12 in) or less
   b: 3 mm (0.12 in) or less

4. Adjust:
   • EXUP cable free play

   **EXUP valve pulley cover bolt**
   7 Nm (0.7 m·kg, 5.1 ft·lb)

5. Install:
   • EXUP valve pulley cover

   **a. Loosen both locknuts “1”**.

   **b. Turn both adjusting bolts “2” in or out until the specification.**

   **Turn in “a”** ⇒ Free play is increased.
   **Turn out “b”** ⇒ Free play is decreased.

   c. Tighten both locknuts.
   d. Turn the main switch to “ON” and check that the projection “c” on the EXUP valve pulley contacts the stoppers (fully open and fully closed positions), then stops between the lines “d” on the cable holder.
ADJUSTING THE REAR DISC BRAKE

1. Check:
   - Brake pedal position
     (distance “a” from the top of the rider footrest to the top of the brake pedal)
   Out of specification → Adjust.

2. Adjust:
   - Brake pedal position

   a. Loosen the locknut “1”.
   b. Turn the adjusting bolt “2” in direction “a” or “b” until the specified brake pedal position is obtained.

   Direction “a”
   Brake pedal is raised.
   Direction “b”
   Brake pedal is lowered.

3. Adjust:
   - Rear brake light switch
     Refer to “ADJUSTING THE REAR BRAKE LIGHT SWITCH” on page 3-22.

CHECKING THE BRAKE FLUID LEVEL

1. Stand the vehicle on a level surface.

   NOTE:
   - Place the vehicle on a suitable stand.
   - Make sure the vehicle is upright.

2. Remove:
   - Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

3. Check:
   - Brake fluid level
     Below the minimum level mark “a” → Add the recommended brake fluid to the proper level.

   Front brake
   Recommended fluid
   DOT 4

   Rear brake
   Recommended fluid
   DOT 4
WARNING

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

CAUTION:

Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.

NOTE:

In order to ensure a correct reading of the brake fluid level, make sure the top of the brake fluid reservoir is horizontal.

4. Install:
   - Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.

CHECKING THE FRONT BRAKE HOSES

The following procedure applies to all of the brake hoses and brake hose clamps.
1. Check:
   - Brake hoses “1”
     Cracks/damage/wear → Replace.

CHECKING THE FRONT BRAKE PADS

The following procedure applies to all of the brake pads.
1. Operate the brake.
2. Check:
   - Front brake pad
     Wear indicator grooves “1” almost disappeared → Replace the brake pads as a set. Refer to “FRONT BRAKE” on page 4-31.

CHECKING THE REAR BRAKE PADS

The following procedure applies to all of the brake pads.
1. Operate the brake.
2. Check:
   - Rear brake pad
     Wear indicators “1” almost touch the brake disc → Replace the brake pads as a set. Refer to “REAR BRAKE” on page 4-43.
2. Check:
   - Brake hose clamps
     Loose → Tighten the clamp bolt.
3. Hold the vehicle upright and apply the brake several times.
4. Check:
   - Brake hoses
     Brake fluid leakage → Replace the damaged hose.
     Refer to “FRONT BRAKE” on page 4-31.

CHECKING THE REAR BRAKE HOSES
1. Remove:
   - Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.
2. Check:
   - Brake hoses “1”
     Cracks/damage/wear → Replace.
3. Check:
   - Brake hose clamp
     Loose connection → Tighten the clamp bolt.
4. Check:
   - Brake hose guide
     Loose → Tighten the guide bolt.
5. Hold the vehicle upright and apply the brake several times.
6. Check:
   - Brake hoses
     Brake fluid leakage → Replace the damaged hose.
     Refer to “REAR BRAKE” on page 4-43.

ADJUSTING THE REAR BRAKE LIGHT SWITCH
NOTE:
The rear brake light switch is operated by movement of the brake pedal. The rear brake light switch is properly adjusted when the brake light comes on just before the braking effect starts.

1. Check:
   - Rear brake light operation timing
     Incorrect → Adjust.
2. Adjust:
   - Rear brake light operation timing
     
     a. Hold the main body “1” of the rear brake light switch so that it does not rotate and turn the adjusting nut “2” in direction “a” or “b” until the rear brake light comes on at the proper time.

Direction “a”
   Brake light comes on sooner.

Direction “b”
   Brake light comes on later.

BLEEDING THE HYDRAULIC BRAKE SYSTEM

WARNING
Bleed the hydraulic brake system whenever:
- the system is disassembled.
- a brake hose is loosened, disconnected or replaced.
- the brake fluid level is very low.
- brake operation is faulty.

1. Remove:
   - Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.
NOTE:  
• Be careful not to spill any brake fluid or allow the brake master cylinder reservoir or brake fluid reservoir to overflow.
• When bleeding the hydraulic brake system, make sure there is always enough brake fluid before applying the brake. Ignoring this precaution could allow air to enter the hydraulic brake system, considerably lengthening the bleeding procedure.
• If bleeding is difficult, it may be necessary to let the brake fluid settle for a few hours. Repeat the bleeding procedure when the tiny bubbles in the hose have disappeared.

2. Bleed:  
   • Hydraulic brake system

   a. Fill the brake fluid reservoir to the proper level with the recommended brake fluid.
   b. Install the diaphragm (brake master cylinder reservoir or brake fluid reservoir).
   c. Connect a clear plastic hose “1” tightly to the bleed screw “2”.
   d. Place the other end of the hose into a container.
   e. Slowly apply the brake several times.
   f. Fully pull the brake lever or fully press down the brake pedal and hold it in position.
   g. Loosen the bleed screw.
   h. Tighten the bleed screw and then release the brake lever or brake pedal.
   i. Repeat steps (e) to (h) until all of the air bubbles have disappeared from the brake fluid in the plastic hose.
   j. Tighten the bleed screw to specification.

k. Fill the brake fluid reservoir to the proper level with the recommended brake fluid. Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

WARNING
After bleeding the hydraulic brake system, check the brake operation.

ADJUSTING THE SHIFT PEDAL

NOTE:  
The shift pedal position is determined by the installed shift rod length “a”.

1. Measure:  
   • Installed shift rod length “a”  
     Incorrect → Adjust.

   a. Front  
   b. Rear

2. Adjust:  
   • Installed shift rod length

Bleed screw (front brake caliper)  
   6 Nm (0.6 m·kg, 4.3 ft·lb)

Bleed screw (rear brake caliper)  
   6 Nm (0.6 m·kg, 4.3 ft·lb)

312.0–316.0 mm (12.28–12.44 in)
a. Loosen both locknuts “1”.
b. Turn the shift rod “2” in direction “a” or “b” until the specified installed shift rod length is obtained.
c. Tighten both locknuts.
d. Make sure the installed shift rod length is within specification.

NOTE:
The drive belt slack must be checked at the tightest point on the belt.

CAUTION:
A drive belt that is too tight will overload the engine and other vital parts, and one that is too loose can skip and damage the swingarm or cause an accident. Therefore, keep the drive belt slack within the specified limits.

NOTE:
Measure the drive belt slack when the engine is cold, and when the drive belt is dry.

WARNING
Securely support the vehicle so that there is no danger of it falling over.

Drive belt slack (on the sidestand)
7.5–13 mm (0.30–0.51 in)
Drive belt slack (on a suitable stand)
14–21 mm (0.55–0.83 in)

NOTE:
The level marks of the level window on the lower drive belt cover are in units of 5 mm (0.20 in). Use them as a standard for measuring the drive belt slack.

• The level marks are for the drive belt slack when the drive belt has been pushed with 4.5 kg (10 lbs) of pressure using a belt tension gauge “1”.

3. Remove:
• Muffler
  Refer to “ENGINE REMOVAL” on page 5-1.
4. Adjust:
• Drive belt slack
NOTE: Place the vehicle on a suitable stand so that the rear wheel is elevated.

a. Loosen the wheel axle nut “1”.

b. Loosen both locknuts “2”.

c. Turn both adjusting bolts “3” in direction “a” or “b” until the specified drive belt slack is obtained.

Direction “a”  
Drive belt is tightened.  
Direction “b”  
Drive belt is loosened.

NOTE: Using the alignment marks on each side of the swingarm, make sure that both belt pullers are in the same position for proper wheel alignment.

d. Tighten the locknuts to specification.

<table>
<thead>
<tr>
<th>Locknut (drive belt adjusting bolt)</th>
<th>16 Nm (1.6 m·kg, 11 ft·lb)</th>
</tr>
</thead>
</table>

e. Tighten the rear wheel axle nut to specification.

<table>
<thead>
<tr>
<th>Rear wheel axle nut</th>
<th>150 Nm (15.0 m·kg, 110 ft·lb)</th>
</tr>
</thead>
</table>

5. Install:
* Muffler  
  Refer to “ENGINE REMOVAL” on page 5-1.

**WARNING**

Always use a new gasket.

CHECKING AND ADJUSTING THE STEERING HEAD

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

NOTE: Place the vehicle on a suitable stand so that the front wheel is elevated.

2. Check:
* Steering head  
  Grasp the bottom of the front fork legs and gently rock the front fork.  
  Binding/looseness → Adjust the steering head.

3. Remove:
* Upper bracket  
  Refer to “FRONT FORK” on page 4-60.

4. Adjust:
* Steering head

   a. Remove the lock washer “1”, the upper ring nut “2”, and the rubber washer “3”.

---

5. Install:
* Muffler  
  Refer to “ENGINE REMOVAL” on page 5-1.

**WARNING**

Always use a new gasket.

CHECKING AND ADJUSTING THE STEERING HEAD

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

NOTE: Place the vehicle on a suitable stand so that the front wheel is elevated.

2. Check:
* Steering head  
  Grasp the bottom of the front fork legs and gently rock the front fork.  
  Binding/looseness → Adjust the steering head.

3. Remove:
* Upper bracket  
  Refer to “FRONT FORK” on page 4-60.

4. Adjust:
* Steering head

   a. Remove the lock washer “1”, the upper ring nut “2”, and the rubber washer “3”.

---

5. Install:
* Muffler  
  Refer to “ENGINE REMOVAL” on page 5-1.

**WARNING**

Always use a new gasket.
b. Loosen the lower ring nut “4”, and then tighten it to the specified torque with a steering nut wrench “5”.

**NOTE:**
Set a torque wrench at a right angle to the steering nut wrench.

### Steering nut wrench
90890-01403
Spanner wrench
YU-33975

### Lower ring nut (initial tightening torque)
52 Nm (5.2 m·kg, 37 ft·lb)

---

**NOTE:**
Make sure the lock washer tabs “a” sit correctly in the ring nut slots “b”.

---

5. Install:
- Upper bracket
  Refer to “FRONT FORK” on page 4-60.

---

### CHECKING THE FRONT FORK
1. Stand the vehicle on a level surface.

**WARNING**
Securely support the vehicle so that there is no danger of it falling over.

2. Check:
   - Inner tube
     Damage/scratches → Replace.
   - Oil seal
     Oil leakage → Replace.

3. Hold the vehicle upright and apply the front brake.

4. Check:
   - Front fork operation
     Push down hard on the handlebar several times and check if the front fork rebounds smoothly.
     Rough movement → Repair.
     Refer to “FRONT FORK” on page 4-60.

---

**WARNING**
Do not overtighten the lower ring nut.

### Lower ring nut (final tightening torque)
18 Nm (1.8 m·kg, 13 ft·lb)

d. Check the steering head for looseness or binding by turning the front fork all the way in both directions. If any binding is felt, remove the lower bracket and check the upper and lower bearings.
   Refer to “STEERING HEAD” on page 4-69.

e. Install the rubber washer “3”.

f. Install the upper ring nut.

g. Finger tighten the upper ring nut “2”, then align the slots of both ring nuts. If necessary, hold the lower ring nut and tighten the upper ring nut until their slots are aligned.

h. Install the lock washer “1”.

---

---

---
ADJUSTING THE REAR SHOCK ABSORBER ASSEMBLY

WARNING

Securely support the vehicle so that there is no danger of it falling over.

Spring preload

CAUTION:

Never go beyond the maximum or minimum adjustment positions.

1. Adjust:
   • Spring preload

NOTE:

Adjust the spring preload with the special wrench “1”.

a. Loosen the locknut “2”.

b. Turn the adjusting ring “3” in direction “a” or “b”.

c. Installed spring length

d. Tighten the locknut to specification.

Direction “a”
Spring preload is increased (suspension is harder).

Direction “b”
Spring preload is decreased (suspension is softer).

Spring preload adjusting positions

Installed spring length

</tr>
<tr>
<td>Maximum</td>
<td>171.0 mm (6.73 in)</td>
</tr>
</tbody>
</table>

CAUTION:

Always tighten the locknut against the adjusting nut and torque it to specification.

CHECKING THE TIRES

The following procedure applies to both of the tires.

1. Check:
   • Tire pressure
     Out of specification → Regulate.
The tire pressure should only be checked and regulated when the tire temperature equals the ambient air temperature.

The tire pressure and the suspension must be adjusted according to the total weight (including cargo, rider, passenger and accessories) and the anticipated riding speed.

Operation of an overloaded vehicle could cause tire damage, an accident or an injury. NEVER OVERLOAD THE VEHICLE.

**WARNING**

- The tire pressure should only be checked and regulated when the tire temperature equals the ambient air temperature.
- The tire pressure and the suspension must be adjusted according to the total weight (including cargo, rider, passenger and accessories) and the anticipated riding speed.
- Operation of an overloaded vehicle could cause tire damage, an accident or an injury. NEVER OVERLOAD THE VEHICLE.

**Tire air pressure (measured on cold tires)**

<table>

</tbody>
</table>

**Maximum load**

| XV19SV(C)/XV19V(C)/XV19MV(C): 210 kg (463 lb) | 250 kPa (36 psi) (2.50 kgf/cm²) | 280 kPa (41 psi) (2.80 kgf/cm²) |
| XV19CTSV(C)/XV19CTV(C)/XV19CTMV(C): 186 kg (410 lb) | 250 kPa (36 psi) (2.50 kgf/cm²) | 280 kPa (41 psi) (2.80 kgf/cm²) |

* Total weight of rider, passenger, cargo and accessories

**WARNING**

- It is dangerous to ride with a worn-out tire. When the tire tread reaches the wear limit, replace the tire immediately.

1. **Tire tread depth**
2. **Side wall**
3. **Wear indicator**

**WARNING**

- Do not use a tubeless tire on a wheel designed only for tube tires to avoid tire failure and personal injury from sudden deflation.
- When using a tube tire, be sure to install the correct tube.
- Always replace a new tube tire and a new tube as a set.
- To avoid pinching the tube, make sure the wheel rim band and tube are centered in the wheel groove.
- Patching a punctured tube is not recommended. If it is absolutely necessary to do so, use great care and replace the tube as soon as possible with a good quality replacement.
WARNING
After extensive tests, the tires listed below have been approved by Yamaha Motor Co., Ltd. for this model. The front and rear tires should always be by the same manufacturer and of the same design. No guarantee concerning handling characteristics can be given if a tire combination other than one approved by Yamaha is used on this vehicle.

<table>
<thead>
<tr>
<th>Tube wheel</th>
<th>Tube tire only</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tubeless wheel</td>
<td>Tube or tubeless tire</td>
</tr>
</tbody>
</table>

WARNING
New tires have a relatively low grip on the road surface until they have been slightly worn. Therefore, approximately 100 km should be traveled at normal speed before any high-speed riding is done.

NOTE:
For tires with a direction of rotation mark “1”:
• Install the tire with the mark pointing in the direction of wheel rotation.
• Align the mark “2” with the valve installation point.

CHECKING THE WHEELS
The following procedure applies to both of the wheels.
1. Check:
   • Wheel
     Damage/out-of-round → Replace.

WARNING
Never attempt to make any repairs to the wheel.

NOTE:
After a tire or wheel has been changed or replaced, always balance the wheel.

CHECKING AND LUBRICATING THE CABLES
The following procedure applies to all of the inner and outer cables.

WARNING
Damaged outer cable may cause the cable to corrode and interfere with its movement. Replace damaged outer cable and inner cables as soon as possible.

1. Check:
   • Outer cable
     Damage → Replace.
2. Check:
   • Cable operation
     Rough movement → Lubricate.

NOTE:
Hold the cable end upright and pour a few drops of lubricant into the cable sheath or use a suitable lubricating device.

Recommended lubricant
Engine oil or a suitable cable lubricant
LUBRICATING THE LEVERS
Lubricate the pivoting point and metal-to-metal moving parts of the levers.

Recommended lubricant
Lithium-soap-based grease

LUBRICATING THE PEDAL
Lubricate the pivoting point and metal-to-metal moving parts of the pedal.

Recommended lubricant
Lithium-soap-based grease

LUBRICATING THE SIDESTAND
Lubricate the pivoting point and metal-to-metal moving parts of the sidestand.

Recommended lubricant
Lithium-soap-based grease

LUBRICATING THE REAR SUSPENSION
Lubricate the pivoting point and metal-to-metal moving parts of the rear suspension.

Recommended lubricant
Lithium-soap-based grease

NOTE:
Lubricate the pivoting points and contact surfaces between the connecting rod and frame and between the swingarm and frame.
ELECTRICAL SYSTEM

CHECKING AND CHARGING THE BATTERY
Refer to “ELECTRICAL COMPONENTS” on page 7-67.

CHECKING THE FUSES
Refer to “ELECTRICAL COMPONENTS” on page 7-67.

REPLACING THE HEADLIGHT BULBS
1. Remove:
   • Windshield (For XV19CTSV(C)/XV19CTV(C)/XV19CTMV(C) only)
     Refer to “GENERAL CHASSIS” on page 4-1.
2. Remove:
   • Headlight cover “1”
3. Disconnect:
   • Air temperature sensor coupler “1”
4. Remove:
   • Headlight assembly “1”
5. Replace:
   • Low beam headlight bulb
5. Replace:
   • High beam headlight bulb

WARNING
Since the headlight bulb gets extremely hot, keep flammable products and your hands away from the bulb until it has cooled down.

CAUTION:
Avoid touching the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the life of the bulb and the luminous flux will be adversely affected. If the headlight bulb gets soiled, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

6. Replace:
   • Headlight bulb cover “1”
b. Disconnect:
   • Headlight coupler "1"

c. Detach:
   • Headlight bulb holder "2"

d. Remove:
   • Headlight bulb

**WARNING**

Since the headlight bulb gets extremely hot, keep flammable products and your hands away from the bulb until it has cooled down.

e. Install:
   • Headlight bulb [New]
   Secure the new headlight bulb with the headlight bulb holder.

**CAUTION:**

Avoid touching the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the life of the bulb and the luminous flux will be adversely affected. If the headlight bulb gets soiled, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

f. Attach:
   • Headlight bulb holder
g. Connect:
   • Headlight coupler
h. Install:
   • Headlight bulb cover

---

7. Install:
   • Headlight assembly
8. Connect:
   • Air temperature sensor coupler
9. Install:
   • Headlight cover

**Headlight cover bolt**
7 Nm (0.7 m·kg, 5.1 ft·lb)

10. Install:
   • Windshield (For XV19CTSV(C)/XV19CTV(C)/XV19CTMV(C) only)
   Refer to “GENERAL CHASSIS” on page 4-1.

**ADJUSTING THE HEADLIGHT BEAMS**

1. Adjust:
   • Headlight beam (vertically)

   a. Turn the adjusting bolt “1” in direction “a” or “b”.

   **Direction “a”**
   Headlight beam is raised.

   **Direction “b”**
   Headlight beam is lowered.

2. Adjust:
   • Headlight beam (horizontally)

   a. Turn the adjusting bolt “1” in direction “a” or “b”.

   **Direction “a”**
   Headlight beam moves to the right.

   **Direction “b”**
   Headlight beam moves to the left.

REMOVING THE WINDSHIELD
1. Remove:
   • Windshield

   a. Insert the key “1” into the windshield lock, turn it clockwise and then remove the key.

   2. Unlock.

   b. Remove the windshield by pushing it forward, and then pulling it upward as shown.

   **WARNING**

   Be careful not to push the vehicle forward when removing the windshield. The vehicle could fall off the sidestand.

   **CAUTION:**

   Securely hold the windshield to prevent it from falling when removing.

ASSEMBLING THE WINDSHIELD
1. Install:
   • Windshield lock “1”

   **NOTE:**

   Align the projection “a” on the lock “1” with the slot “b” in the windshield bracket “2”.

   b. Push the windshield backward until it snaps into place.

INSTALLING THE WINDSHIELD
1. Install:
   • Right windshield holder bracket assembly “1”

   **NOTE:**

   Pass the throttle cables “2” between the front fork and the right windshield holder bracket assembly.

2. Unlock.

   **NOTE:**

   Make sure that the throttle cables “1” are not pinched.
c. Insert the key into the windshield lock, turn it counterclockwise until it stops to lock the fastener, and then remove the key.

1. Lock  
2. Fastener
Removing the sidebags and backrest (For XV19CTSV(C)/XV19CTV(C)/XV19CTMV(C))

### Order | Job/Parts to remove | Q'ty | Remarks
--- | --- | --- | ---
1 | Sidebag (left and right) | 2 | NOTE: Water can be harmful to untreated leather. Use Yamaha Saddle Soap or another quality brand according to the manufacturer's directions to clean the leather on the sidebags. Polish the dry leather with a soft cloth, and then treat with Yamaha Mink Oil or another high-quality leather protectant for increased water resistance.
2 | Backrest assembly | 1 |
3 | Backrest upper bracket stay | 1 |
4 | Backrest pad | 1 |
5 | Backrest plate | 2 |
6 | Backrest upper bracket | 1 |
7 | Backrest lower bracket (left and right) | 2 |

### Torque Specifications
- **23 Nm (2.3 m·kg, 17 ft·lb)**
- **10 Nm (1.0 m·kg, 7.2 ft·lb)**
- **12 Nm (1.2 m·kg, 8.7 ft·lb)**
- **23 Nm (2.3 m·kg, 17 ft·lb)**
- **10 Nm (1.0 m·kg, 7.2 ft·lb)**

For installation, reverse the removal procedure.
REMOVING THE BACKREST
1. Remove:
   • Backrest

   a. Open the sidebag lids.
   b. Insert the key “1” into the backrest lock, turn it counterclockwise, and then remove the key.
   c. Pull the lever “1” on each side of the backrest upward.
   d. While holding the levers in the upward position, lift the backrest upward and remove it by pulling it to the rear.

ASSEMBLING THE BACKREST
1. Install:
   • Backrest lock “1”

   NOTE:
   Align the projection “a” on the lock “1” with the slot “b” in the left backrest lower bracket “2”.

   2. Install:
      • Backrest lower brackets “1”
      • Backrest upper bracket “2”
      • Backrest plate

   NOTE:
   Before tightening the bolts “3” to specification, temporarily install the backrest lower brackets on the backrest holders, making sure not to push down on the rear of the brackets. The lower bolts cannot be tightened when the backrest lower brackets are installed completely.

INSTALLING THE BACKREST
1. Install:
   • Backrest

   a. Fit the slot “a” on each backrest bracket (left and right side) into the groove of its holder “b”.

   CAUTION:
   Be careful not to scratch the rear fender when fitting the slot into the groove.
b. Push the rear of the backrest down smoothly but forcefully to lock it in place and make sure that the lever hook “1” on each side is securely fit over its holder “2”.

**WARNING**

Both lever hooks must be securely fitted over their holder. If the backrest is loose, a passenger might lose balance and fall.

c. Insert the key into the backrest lock, turn it clockwise, and then remove the key.
Removing the sidebag brackets (For XV19CTSV(C)/XV19CTV(C)/XV19CTMV(C))

Order | Job/Parts to remove | Q’ty | Remarks
--- | --- | --- | ---
| Sidebag/Backrest | | | Refer to "GENERAL CHASSIS" on page 4-1.
| 1 | Passenger footrest (left and right) | 2 | 
| 2 | Sidebag bracket brace | 1 | 
| 3 | Sidebag bracket (left and right) | 2 | NOTE: Remove only one sidebag bracket at a time. If both brackets are removed at the same time, the rear fender will fall. 
| 4 | O₂ sensor lead guide | 1 | For installation, reverse the removal procedure. 

23 Nm (2.3 m·kg, 17 ft·lb)

47 Nm (4.7 m·kg, 34 ft·lb)

23 Nm (2.3 m·kg, 17 ft·lb)
CHECKING THE SIDEBAG BRACKET SPRING NUTS

1. Check:
   • Sidebag bracket spring nut height “a”
     Out of specification → Adjust.

   Sidebag bracket spring nut height
   12.0 mm (0.47 in)

2. Check:
   • Sidebag bracket spring nuts
     Damage → Replace.
Removing the seats and side covers

**FRONT WHEEL**

**REMOVING THE FRONT WHEEL**

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

2. Remove:
   - Right front fender stay “1”
   - Left front fender stay “2”
   - Front fender stay rod “3”

**NOTE:**

- Remove the right front fender stay bolts and left front fender stay bolt (rear side), then hold the rod with a wrench “4” and remove the left front fender stay bolt (front side) “5”.
- Remove the rod from the right side of the vehicle.

3. Loosen:
   - Front wheel axle pinch bolt “1”

4. Remove:
   - Front brake calipers

**NOTE:**

Do not apply the brake lever when removing the brake calipers.

5. Elevate:
   - Front wheel

**NOTE:**

Place the vehicle on a suitable stand so that the front wheel is elevated.

---

**DISASSEMBLING THE FRONT WHEEL**

1. Remove:
   - Oil seals
   - Wheel bearings

- Clean the outside of the front wheel hub.
- Remove the oil seals “1” with a flathead screwdriver.

**NOTE:**

To prevent damaging the wheel, place a rag “2” between the screwdriver and the wheel surface.

- Remove the wheel bearings “3” with a general bearing puller.

---

**CHECKING THE FRONT WHEEL**

1. Check:
   - Front wheel axle
   - Roll the wheel axle on a flat surface.
   - Bends → Replace.

**WARNING**

Do not attempt to straighten a bent wheel axle.
2. Check:
• Tire
• Front wheel
  Damage/wear → Replace.
Refer to “CHECKING THE TIRES” on page 3-27 and “CHECKING THE WHEELS” on page 3-29.

3. Measure:
• Radial wheel runout “1”
• Lateral wheel runout “2”
  Over the specified limits → Replace.

Radial wheel runout limit
1.0 mm (0.04 in)
Lateral wheel runout limit
0.5 mm (0.02 in)

4. Check:
• Wheel bearings
  Front wheel turns roughly or is loose → Replace the wheel bearings.
• Oil seals
  Damage/wear → Replace.

ASSEMBLING THE FRONT WHEEL
1. Install:
   • Wheel bearings New
   • Oil seals New

CAUTION:
Do not contact the wheel bearing inner race “1” or balls “2”. Contact should be made only with the outer race “3”.

NOTE:_____________________________________
Use a socket “4” that matches the diameter of the wheel bearing outer race and oil seal.

ADJUSTING THE FRONT WHEEL STATIC BALANCE
NOTE:_____________________________________
• After replacing the tire, wheel or both, the front wheel static balance should be adjusted.
• Adjust the front wheel static balance with the brake disc installed.

1. Remove:
   • Balancing weight(s)
2. Find:
   • Front wheel’s heavy spot

NOTE:_____________________________________
Place the front wheel on a suitable balancing stand.

a. Spin the front wheel.
b. When the front wheel stops, put an “X” mark at the bottom of the wheel.
c. Turn the front wheel 90° so that the “X₁” mark is positioned as shown.

d. Release the front wheel.

e. When the wheel stops, put an “X₂” mark at the bottom of the wheel.

f. Repeat steps (d) through (f) several times until all the marks come to rest at the same spot.

g. The spot where all the marks come to rest is the front wheel’s heavy spot “X”.

3. Adjust:
   • Front wheel static balance

   a. Install a balancing weight “1” onto the rim exactly opposite the heavy spot “X”.

   NOTE: 
   Start with the lightest weight.

b. Turn the front wheel 90° so that the heavy spot is positioned as shown.

c. If the heavy spot does not stay in that position, install a heavier weight.

d. Repeat steps (b) and (c) until the front wheel is balanced.

4. Check:
   • Front wheel static balance

   a. Turn the front wheel and make sure it stays at each position shown.

   b. If the front wheel does not remain stationary at all of the positions, rebalance it.

---

**INSTALLING THE FRONT WHEEL (FRONT BRAKE DISCS)**

The following procedure applies to both of the front brake discs.

1. Install:
   • Front brake disc
   • Front brake disc cover

   **Front brake disc bolt**
   23 Nm (2.3 m·kg, 17 ft·lb)
   LOCTITE®

   **NOTE:**
   Tighten the front brake disc bolts in stages and in a crisscross pattern.
2. Check:
   • Front brake discs
     Refer to “CHECKING THE FRONT BRAKE DISCS” on page 4-36.
3. Lubricate:
   • Oil seal lips

4. Install:
   • Front wheel axle

   **NOTE:**
   Install the tire and wheel with the mark “1” pointing in the direction of wheel rotation.

5. Tighten:
   • Front wheel axle
   • Front wheel axle pinch bolt

   **Front wheel axle**
   72 Nm (7.2 m·kg, 52 ft·lb)
   Front wheel axle pinch bolt
   23 Nm (2.3 m·kg, 17 ft·lb)

   **CAUTION:**
   Before tightening the wheel axle, push down hard on the handlebar several times and check if the front fork rebounds smoothly.

6. Install:
   • Front brake calipers

7. Install:
   • Front fender
   • Left front brake hose guide bracket
   • Right front brake hose guide bracket

   **NOTE:**
   • Temporarily tighten the front fender bolts.
   • Apply locking agent (LOCTITE®) to the threads of the front fender bolts.

8. Install:
   • Front fender stay rod “1”
   • Left front fender stay “2”
   • Right front fender stay “3”

   **NOTE:**
   • Insert the rod into the front wheel axle from the right side of the vehicle.
   • Tighten the left front fender stay bolt (front side) “4” to specification while holding the rod with a wrench “5”, and then tighten the left front fender stay bolt (rear side) and right front fender stay bolts to specification.

9. Tighten:
   • Front fender bolts

   **Front fender bolt**
   16 Nm (1.6 m·kg, 11 ft·lb)
   LOCTITE®

REMOVING THE REAR WHEEL (DISC)

1. Stand the vehicle on a level surface.

WARNING
Securely support the vehicle so that there is no danger of it falling over.

NOTE:
Place the vehicle on a suitable stand so that the rear wheel is elevated.

2. Remove:
   • Rear brake caliper “1”

NOTE:
Do not depress the brake pedal when removing the brake caliper.

3. Loosen:
   • Drive belt adjusting locknuts “1”
   • Drive belt adjusting bolts “2”

4. Remove:
   • Rear wheel axle nut “1”
   • Rear wheel axle “2”
   • Rear wheel

NOTE:
Push the rear wheel forward and remove the drive belt from the rear wheel pulley.

DISASSEMBLING THE REAR WHEEL

1. Remove:
   • Oil seals
   • Wheel bearings

Refer to “DISASSEMBLING THE FRONT WHEEL” on page 4-18.

CHECKING THE REAR WHEEL

1. Check:
   • Rear wheel axle
   • Rear wheel
   • Wheel bearings
   • Oil seals

Refer to “CHECKING THE FRONT WHEEL” on page 4-18.

2. Check:
   • Tire
   • Rear wheel
   Damage/wear → Replace.

Refer to “CHECKING THE TIRES” on page 3-27 and “CHECKING THE WHEELS” on page 3-29.

3. Measure:
   • Radial wheel runout
   • Lateral wheel runout

Refer to “CHECKING THE FRONT WHEEL” on page 4-18.

CHECKING THE REAR BRAKE CALIPER BRACKET

1. Check:
   • Rear brake caliper bracket
   Cracks/damage → Replace.
CHECKING THE REAR WHEEL DRIVE HUB
1. Check:
   • Rear wheel drive hub
     Cracks/damage → Replace.
   • Rear wheel drive hub dampers
     Damage/wear → Replace.

CHECKING AND REPLACING THE REAR WHEEL PULLEY
1. Check:
   • Rear wheel pulley
     Surface plating has come off → Replace the rear wheel pulley.
     Bent teeth → Replace the rear wheel pulley.
2. Replace:
   • Rear wheel pulley

   a. Remove the self-locking nuts and the rear wheel pulley.
   b. Clean the rear wheel drive hub with a clean cloth, especially the surfaces that contact the pulley.
   c. Install the new rear wheel pulley.

   Rear wheel pulley self-locking nut
   95 Nm (9.5 m·kg, 68 ft·lb)

   NOTE:
   Tighten the self-locking nuts in stages and in a crisscross pattern.

ASSEMBLING THE REAR WHEEL
1. Install:
   • Wheel bearings
   • Oil seals

   Refer to “ASSEMBLING THE FRONT WHEEL” on page 4-19.

ADJUSTING THE REAR WHEEL STATIC BALANCE

   NOTE:
   • After replacing the tire, wheel or both, the rear wheel static balance should be adjusted.
   • Adjust the rear wheel static balance with the brake disc and rear wheel drive hub installed.

1. Adjust:
   • Rear wheel static balance

   Refer to “ADJUSTING THE FRONT WHEEL STATIC BALANCE” on page 4-19.

INSTALLING THE REAR WHEEL (DISC)
1. Lubricate:
   • Rear wheel axle
   • Oil seal lips

   Recommended lubricant
   Lithium-soap-based grease

2. Install:
   • Rear brake disc
   • Rear brake disc cover

   Rear brake disc bolt
   18 Nm (1.8 m·kg, 13 ft·lb)
   LOCTITE®

   NOTE:
   • Apply locking agent (LOCTITE®) to the threads of the brake disc bolts.
   • Tighten the brake disc bolts in stages and in a crisscross pattern.

3. Check:
   • Rear brake disc

   Refer to “CHECKING THE REAR BRAKE DISC” on page 4-49.

4. Install:
   • Rear wheel axle
   • Washer
   • Rear wheel axle nut
NOTE: 
Temporarily tighten the wheel axle nut.

5. Adjust:
   • Drive belt slack
     Refer to “ADJUSTING THE DRIVE BELT SLACK” on page 3-24.

6. Tighten:
   • Rear wheel axle nut

<table>

</tbody>
</table>

The following procedure applies to both of the front brake calipers.

For assembly, reverse the disassembly procedure.
INTRODUCTION

WARNING

Disc brake components rarely require disassembly. Therefore, always follow these preventive measures:

- Never disassemble brake components unless absolutely necessary.
- If any connection on the hydraulic brake system is disconnected, the entire brake system must be disassembled, drained, cleaned, properly filled, and bled after reassembly.
- Never use solvents on internal brake components.
- Use only clean or new brake fluid for cleaning brake components.
- Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any splintered brake fluid immediately.
- Avoid brake fluid coming into contact with the eyes as it can cause serious injury.
- FIRST AID FOR BRAKE FLUID ENTERING THE EYES:
  - Flush with water for 15 minutes and get immediate medical attention.

CHECKING THE FRONT BRAKE DISCS

The following procedure applies to both brake discs.

1. Remove:
   - Front wheel
     Refer to “FRONT WHEEL” on page 4-15.

2. Check:
   - Brake disc
     Damage/galling → Replace.

3. Measure:
   - Brake disc deflection
     Out of specification → Correct the brake disc deflection or replace the brake disc.

Brake disc deflection limit
0.10 mm (0.0039 in)

4. Measure:
   - Brake disc thickness
     Measure the brake disc thickness at a few different locations.
     Out of specification → Replace.

Brake disc thickness limit
4.5 mm (0.18 in)

5. Adjust:
   - Brake disc deflection
     a. Remove the brake disc.
     b. Rotate the brake disc by one bolt hole.
     c. Install the brake disc.

Front brake disc bolt
23 Nm (2.3 m·kg, 17 ft·lb)
LOCTITE®

NOTE:

- Apply locking agent (LOCTITE®) to the threads of the brake disc bolts.
- Tighten the brake disc bolts in stages and in a crisscross pattern.
FRONT BRAKE

6. Install:
• Front wheel
  Refer to “FRONT WHEEL” on page 4-15.

REPLACING THE FRONT BRAKE PADS
The following procedure applies to both brake calipers.

NOTE: When replacing the brake pads, it is not necessary to disconnect the brake hose or disassemble the brake caliper.

1. Measure:
• Brake pad wear limit “a”
  Out of specification → Replace the brake pads as a set.

   ![Brake pad lining thickness (inner)]
   5.5 mm (0.22 in)
   Limit 0.5 mm (0.02 in)

   ![Brake pad lining thickness (outer)]
   5.5 mm (0.22 in)
   Limit 0.5 mm (0.02 in)

2. Install:
• Brake pad shims (onto the brake pads)
• Brake pads
• Brake pad spring

NOTE:
Always install new brake pads, brake pad shims, and a brake pad spring as a set.

a. Connect a clear plastic hose “1” tightly to the bleed screw “2”. Put the other end of the hose into an open container.
b. Loosen the bleed screw and push the brake caliper pistons into the brake caliper with your finger.
c. Tighten the bleed screw.

![Bleed screw (front brake caliper)]
6 Nm (0.6 m·kg, 4.3 ft·lb)

d. Install a new brake pad shim onto each new brake pad.
e. Install new brake pads and a new brake pad spring.

NOTE:
The arrow mark “a” on the brake pad spring must point in the direction of disc rotation.
FRONT BRAKE

3. Install:
   • Brake pad pin
   • Brake pad clips
   • Front brake caliper

4. Check:
   • Brake fluid level
     Below the minimum level mark “a” → Add the recommended brake fluid to the proper level.
     Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

5. Check:
   • Brake lever operation
     Soft or spongy feeling → Bleed the brake system.
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

EAS22300
REMOVING THE FRONT BRAKE CALIPERS
The following procedure applies to both of the brake calipers.

NOTE: 
Before removing the brake caliper, drain the brake fluid from the entire brake system.

1. Remove:
   • Brake hose holder “1”
   • Front brake hose union bolt “2”
   • Copper washers “3”
   • Front brake hose “4”

   FRONT BRAKE caliper bolt
   40 Nm (4.0 m-k, 29 ft-lb)

   Put the end of the brake hose into a container and pump out the brake fluid carefully.

EAS22350
DISASSEMBLING THE FRONT BRAKE CALIPERS
The following procedure applies to both of the brake calipers.

1. Remove:
   • Brake caliper pistons “1”
   • Brake caliper piston seals “2”

   WARNING
   Do not loosen the bolts “3”.

a. Blow compressed air into the brake hose joint opening “a” to force out the pistons from the brake caliper.

   WARNING
   • Cover the brake caliper pistons with a rag.
   • Be careful not to get injured when the pistons are expelled from the brake caliper.
   • Never try to pry out the brake caliper pistons.
b. Remove the brake caliper piston seals.

CHECKING THE FRONT BRAKE CALIPERS

Recommended brake component replacement schedule

<table>
<thead>
<tr>
<th>Component</th>
<th>Replacement Schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brake pads</td>
<td>If necessary</td>
</tr>
<tr>
<td>Piston seals</td>
<td>Every two years</td>
</tr>
<tr>
<td>Brake hoses</td>
<td>Every four years</td>
</tr>
<tr>
<td>Brake fluid</td>
<td>Every two years and whenever the brake is disassembled</td>
</tr>
</tbody>
</table>

1. Check:
- Brake caliper pistons “1”
  Rust/scratches/wear → Replace the brake caliper pistons.
- Brake caliper cylinders “2”
  Scratches/wear → Replace the brake caliper assembly.
- Brake caliper body “3”
  Cracks/damage → Replace the brake caliper assembly.
- Brake fluid delivery passages (brake caliper body)
  Obstruction → Blow out with compressed air.

WARNING
Whenever a brake caliper is disassembled, replace the piston seals.

ASSEMBLING THE FRONT BRAKE CALIPERS

WARNING
- Before installation, all internal brake components should be cleaned and lubricated with clean or new brake fluid.
- Never use solvents on internal brake components as they will cause the piston seals to swell and distort.
- Whenever a brake caliper is disassembled, replace the brake caliper piston seals.

Recommended fluid
DOT 4

INSTALLING THE FRONT BRAKE CALIPERS

The following procedure applies to both of the brake calipers.
1. Install:
   - Front brake caliper “1” (temporarily)
   - Copper washers New
   - Front brake hose “2”
   - Front brake hose union bolt “3”

WARNING
Proper brake hose routing is essential to ensure safe vehicle operation. Refer to “CABLE ROUTING” on page 2-45.

CAUTION:
When installing the brake hose onto the brake caliper “1”, make sure the brake pipe “a” touches the projection “b” on the brake caliper.
2. Remove:
   - Front brake caliper

3. Install:
   - Brake pads
   - Brake pad spring
   - Brake pad pin
   - Brake pad clips
   - Front brake caliper
   - Brake hose guide

Refer to “REPLACING THE FRONT BRAKE PADS” on page 4-37.

4. Fill:
   - Brake master cylinder reservoir
     (with the specified amount of the recommended brake fluid)

WARNING
• Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
• Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
• When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

CAUTION:
Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.

5. Bleed:
   - Brake system
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

6. Check:
   - Brake fluid level
     Below the minimum level mark “a” → Add the recommended brake fluid to the proper level.

Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

7. Check:
   - Brake lever operation
     Soft or spongy feeling → Bleed the brake system.
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

EAS22490
REMOVING THE FRONT BRAKE MASTER CYLINDER
NOTE:
Before removing the front brake master cylinder, drain the brake fluid from the entire brake system.

1. Remove:
   - Front brake hose union bolt “1”
   - Copper washers “2”
   - Front brake hose “3”

NOTE:
To collect any remaining brake fluid, place a container under the master cylinder and the end of the brake hose.

EAS22500
CHECKING THE FRONT BRAKE MASTER CYLINDER
1. Check:
   - Brake master cylinder “1”
     Damage/scratches/wear → Replace.
2. Check:
   • Brake master cylinder kit
     Damage/scratches/wear → Replace.
3. Check:
   • Brake master cylinder reservoir
     Cracks/damage → Replace.
   • Brake master cylinder reservoir diaphragm
     Damage/wear → Replace.
4. Check:
   • Brake hose
     Cracks/damage/wear → Replace.

### ASSEMBLING THE FRONT BRAKE MASTER CYLINDER

**WARNING**

- Before installation, all internal brake components should be cleaned and lubricated with clean or new brake fluid.
- Never use solvents on internal brake components.

**Recommended fluid**
DOT 4

### INSTALLING THE FRONT BRAKE MASTER CYLINDER

1. Install:
   • Front brake master cylinder “1”
   • Front brake master cylinder holder “2”

**Front brake master cylinder holder bolt**
10 Nm (1.0 m·kg, 7.2 ft·lb)

**NOTE:**
- Align the end of the brake master cylinder holder with the punch mark “a” on the handlebar.

**WARNING**
Proper brake hose routing is essential to insure safe vehicle operation. Refer to “CABLE ROUTING” on page 2-45.

**NOTE:**
- Install the brake hose at a right angle to the front brake master cylinder as shown in the illustration.
- While holding the brake hose, tighten the union bolt.
- Turn the handlebar to the left and right to make sure the brake hose does not touch other parts (e.g., wire harness, cables, leads). Correct if necessary.

**Recommended fluid**
DOT 4

**Front brake hose union bolt**
30 Nm (3.0 m·kg, 22 ft·lb)
**WARNING**

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake master cylinder reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

---

**CAUTION:**

Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.

4. **Bleed:**
   - Brake system
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

5. **Check:**
   - Brake fluid level
     Below the minimum level mark “a” → Add the recommended brake fluid to the proper level.
     Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

---

6. **Check:**
   - Brake lever operation
     Soft or spongy feeling → Bleed the brake system.
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

**INTRODUCTION**

**WARNING**

Disc brake components rarely require disassembly. Therefore, always follow these preventive measures:

- Never disassemble brake components unless absolutely necessary.
- If any connection on the hydraulic brake system is disconnected, the entire brake system must be disassembled, drained, cleaned, properly filled, and bled after reassembly.
- Never use solvents on internal brake components.
- Use only clean or new brake fluid for cleaning brake components.
- Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any split brake fluid immediately.
- Avoid brake fluid coming into contact with the eyes as it can cause serious injury.

**FIRST AID FOR BRAKE FLUID ENTERING THE EYES:**

Flush with water for 15 minutes and get immediate medical attention.

---

**CHECKING THE REAR BRAKE DISC**

1. **Remove:**
   - Rear wheel
     Refer to “REAR WHEEL” on page 4-23.

2. **Check:**
   - Brake disc
     Damage/galling → Replace.

3. **Measure:**
   - Brake disc deflection
     Out of specification → Correct the brake disc deflection or replace the brake disc.
     Refer to “CHECKING THE FRONT BRAKE DISCS” on page 4-36.

**Brake disc deflection limit**

0.15 mm (0.0059 in)

4. **Measure:**
   - Brake disc thickness
     Measure the brake disc thickness at a few different locations.
     Out of specification → Replace.
     Refer to “CHECKING THE FRONT BRAKE DISCS” on page 4-36.

---

**REPLACING THE REAR BRAKE PADS**

**NOTE:**

When replacing the brake pads, it is not necessary to disconnect the brake hose or disassemble the brake caliper.

1. **Measure:**
   - Brake pad wear limit “a”
     Out of specification → Replace the brake pads as a set.

**Brake pad lining thickness (inner)**

- 5.8 mm (0.23 in)
  Limit
- 0.8 mm (0.03 in)

**Brake pad lining thickness (outer)**

- 5.8 mm (0.23 in)
  Limit
- 0.8 mm (0.03 in)

---

5. **Adjust:**
   - Brake disc deflection
     Refer to “CHECKING THE FRONT BRAKE DISCS” on page 4-36.

**Brake disc bolt**

18 Nm (1.8 m·kg, 13 ft·lb)
LOCTITE®

6. **Install:**
   - Rear wheel
     Refer to “REAR WHEEL” on page 4-23.
NOTE: Always install new brake pads and brake pad springs as a set.

a. Connect a clear plastic hose “1” tightly to the bleed screw “2”. Put the other end of the hose into an open container.
b. Loosen the bleed screw and push the brake caliper piston into the brake caliper with your finger.
c. Tighten the bleed screw.

Bleed screw (rear brake caliper)
6 Nm (0.6 m·kg, 4.3 ft·lb)

3. Install:
• Brake caliper

Rear brake caliper bolt
27 Nm (2.7 m·kg, 19 ft·lb)

4. Check:
• Brake fluid level
  Below the minimum level mark “a” → Add the recommended brake fluid to the proper level. Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

5. Check:
• Brake pedal operation
  Soft or spongy feeling → Bleed the brake system.

Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

REMOVING THE REAR BRAKE CALIPER

Before disassembling the brake caliper, drain the brake fluid from the entire brake system.

1. Remove:
• Rear brake hose union bolt “1”
• Copper washers “2”
• Rear brake hose “3”

NOTE: Put the end of the brake hose into a container and pump out the brake fluid carefully.

DISASSEMBLING THE REAR BRAKE CALIPER

1. Remove:
• Brake caliper piston
• Brake caliper piston seals

a. Blow compressed air into the brake hose joint opening “a” to force out the piston from the brake caliper.

WARNING
• Cover the brake caliper piston with a rag. Be careful not to get injured when the piston is expelled from the brake caliper.
• Never try to pry out the brake caliper piston.
b. Remove the brake caliper piston seals.

   30 Nm (3.0 m·kg, 22 ft·lb)

---

**WARNING**

Proper brake hose routing is essential to ensure safe vehicle operation. Refer to “CABLE ROUTING” on page 2-45.

---

**CAUTION:**

When installing the brake hose onto the brake caliper “1”, make sure the brake pipe “a” touches the projection “b” on the brake caliper.

---

2. Remove:
- Rear brake caliper

3. Install:
- Brake pads
4-52

• Brake pad springs
• Rear brake caliper bolts
• Rear brake caliper
  Refer to “REPLACING THE REAR BRAKE PADS” on page 4-49.

<table>

</tbody>
</table>

EWA13500

**WARNING**

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

ECA13540

**CAUTION:**

Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.

5. Bleed:
• Brake system
  Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

6. Check:
• Brake fluid level
  Below the minimum level mark “a” → Add the recommended brake fluid to the proper level. Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.

7. Check:
• Brake pedal operation
  Soft or spongy feeling → Bleed the brake system.
  Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

EAS22700

REMOVING THE REAR BRAKE MASTER CYLINDER

**NOTE:**

Before removing the rear brake master cylinder, drain the brake fluid from the entire brake system.

1. Remove:
• Rear brake hose union bolt “1”
• Copper washers “2”
• Rear brake hose “3”

**NOTE:**

To collect any remaining brake fluid, place a container under the master cylinder and the end of the brake hose.

EAS22700

CHECKING THE REAR BRAKE MASTER CYLINDER

1. Check:
• Brake master cylinder
  Damage/scratches/wear → Replace.
• Brake fluid delivery passages (brake master cylinder body)
  Obstruction → Blow out with compressed air.
2. Check:
   • Brake master cylinder kit
     Damage/scratches/wear → Replace.
3. Check:
   • Brake fluid reservoir
     Cracks/damage → Replace.
   • Brake fluid reservoir diaphragm
     Cracks/damage → Replace.
4. Check:
   • Brake hoses
     Cracks/damage/wear → Replace.

**ASSEMBLING THE REAR BRAKE MASTER CYLINDER**

**WARNING**

- Before installation, all internal brake components should be cleaned and lubricated with clean or new brake fluid.
- Never use solvents on internal brake components.

**INSTALLING THE REAR BRAKE MASTER CYLINDER**

1. Install:
   • Copper washers “1” New
   • Rear brake hose “2”
   • Rear brake hose union bolt “3”

**Recommended fluid**

DOT 4

**WARNING**

Proper brake hose routing is essential to insure safe vehicle operation. Refer to “CABLE ROUTING” on page 2-45.

**CAUTION:**

When installing the brake hose onto the brake master cylinder, make sure the brake pipe touches the projection “a” on the brake caliper bracket as shown.

**Recommended fluid**

DOT 4

**WARNING**

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

**CAUTION:**

Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any split brake fluid immediately.

2. Fill:
   • Brake fluid reservoir
     (with the specified amount of the recommended brake fluid)

3. Bleed:
   • Brake system
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.
4. Check:
   • Brake fluid level
     Below the minimum level mark “a” → Add the recommended brake fluid to the proper level. Refer to “CHECKING THE BRAKE FLUID LEVEL” on page 3-20.
5. Check:
   • Brake pedal operation
     Soft or spongy feeling → Bleed the brake system.
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” on page 3-22.

6. Adjust:
   • Brake pedal position
     Refer to “ADJUSTING THE REAR DISC BRAKE” on page 3-20.

7. Adjust:
   • Rear brake light operation timing
     Refer to “ADJUSTING THE REAR BRAKE LIGHT SWITCH” on page 3-22.
Removing the handlebar

- **Order 1:** Rearview mirror 2
- **Order 2:** Plastic clamp 2
- **Order 3:** Front brake light switch connector 2 Disconnect.

For installation, reverse the removal procedure.
REMOVING THE HANDLEBAR

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

2. Remove:
   • Handlebar grip “1”

**NOTE:**

Blow compressed air between the handlebar and the left handlebar grip, and gradually push the grip off the handlebar.

CHECKING THE HANDLEBAR

1. Check:
   • Handlebar
     Bends/cracks/damage → Replace.

**WARNING**

Do not attempt to straighten a bent handlebar as this may dangerously weaken it.

INSTALLING THE HANDLEBAR

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

2. Connect:
   • Throttle cable (decelerator cable) “1”
     (to the right handlebar switch “2”)

**NOTE:**

Rotate the right handlebar switch and screw it onto the end of the throttle cable.

3. Pass the left and right handlebar switch leads through the handlebar.

4. Install:
   • Handlebar “1”
   • Upper handlebar holder “2”

**CAUTION:**

First, tighten the bolts on the front side of the handlebar holder, and then on the rear side.

• Turn the handlebar all the way to the left and right. If there is any contact with the fuel tank, adjust the handlebar position.

**NOTE:**

Align the match marks “a” on the handlebar with the upper surface of the lower handlebar holders.

5. Install:
   • Handlebar grip

- a. Apply a thin coat of rubber adhesive onto the left end of the handlebar.
- b. Slide the handlebar grip over the left end of the handlebar.
- c. Wipe off any excess rubber adhesive with a clean rag.
Do not touch the handlebar grip until the rubber adhesive has fully dried.

6. Install:
   • Left handlebar switch “1”

   **NOTE:**
   Align the projection “a” on the left handlebar switch with the hole “b” in the handlebar.

7. Install:
   • Clutch master cylinder “1”
   • Clutch master cylinder holder “2”

   **Clutch master cylinder holder bolt**
   10 Nm (1.0 m·kg, 7.2 ft·lb)

   **NOTE:**
   • Align the end of the clutch master cylinder holder with the punch mark “a” on the handlebar.
   • First tighten the rear bolt, then the front bolt.

8. Install:
   • Throttle grip
   • Throttle cables
   • Right handlebar switch “1”
   • Grip end “2”

   **NOTE:**
   • Align the projection “a” on the right handlebar switch with the hole “b” in the handlebar.

9. Install:
   • Front brake master cylinder “1”
   • Front brake master cylinder holder “2”

   **Front brake master cylinder holder bolt**
   10 Nm (1.0 m·kg, 7.2 ft·lb)

   **NOTE:**
   • Align the end of the front brake master cylinder holder with the punch mark “a” on the handlebar.
   • First tighten the rear bolt, then the front bolt.

10. Adjust:
   • Throttle cable free play
   Refer to “ADJUSTING THE THROTTLE CABLE FREE PLAY” on page 3-8.
Throttle cable free play
4.0–6.0 mm (0.16–0.24 in)

REMOVING THE FRONT FORK LEGS
The following procedure applies to both of the front fork legs.
1. Stand the vehicle on a level surface.

WARNING
Securely support the vehicle so that there is no danger of it falling over.

NOTE:
Place the vehicle on a suitable stand so that the front wheel is elevated.

2. Loosen:
   • Lower bracket pinch bolts

WARNING
Before loosening the lower bracket pinch bolts, support the front fork leg.

DISASSEMBLING THE FRONT FORK LEGS
The following procedure applies to both of the front fork legs.
1. Drain:
   • Fork oil

NOTE:
Stroke the outer tube several times while draining the fork oil.

2. Remove:
   • Dust seal “1”
   • Oil seal clip “2” (with a flathead screwdriver)

CAUTION:
Do not scratch the inner tube.

3. Remove:
   • Damper rod bolt “1”
   • Copper washer

NOTE:
While holding the damper rod with the damper rod holder “2” and T-handle “3”, loosen the damper rod bolt.

CAUTION:
Excessive force will damage the oil seal and bushing. A damaged oil seal or bushing must be replaced.
 Avoid bottoming the inner tube into the outer tube during the above procedure, as the oil flow stopper will be damaged.

Damper rod holder
90890-01460
T-handle
90890-01326
T-handle 3/8” drive 60 cm long
YM-01326
CHECKING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

1. Check:
   • Inner tube
   • Outer tube
     Bends/damage/scratches → Replace.

   **WARNING**
   Do not attempt to straighten a bent inner tube as this may dangerously weaken it.

2. Measure:
   • Spring free length “a”
     Out of specification → Replace.

   **Fork spring free length**
   273.9 mm (10.78 in)
   Limit
   268.4 mm (10.57 in)

   **NOTE:**
   • When assembling the front fork leg, be sure to replace the following parts:
     – Inner tube bushing
     – Outer tube bushing
     – Oil seal
     – Dust seal
   • Before assembling the front fork leg, make sure all of the components are clean.

3. Check:
   • Damper rod
     Damage/wear → Replace.
     Obstruction → Blow out all of the oil passages with compressed air.
   • Oil flow stopper
     Damage → Replace.

   **CAUTION:**
   • The front fork leg has a built-in damper adjusting rod and a very sophisticated internal construction, which are particularly sensitive to foreign material.
   • When disassembling and assembling the front fork leg, do not allow any foreign material to enter the front fork.

4. Check:
   • Cap bolt O-ring
     Damage/wear → Replace.

ASSEMBLING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

**WARNING**
• Make sure the oil levels in both front fork legs are equal.
• Uneven oil levels can result in poor handling and a loss of stability.

**NOTE:**
• When assembling the front fork leg, be sure to replace the following parts:
  – Inner tube bushing
  – Damper rod “2”
  – Rebound spring
  – Spring “3”
  – Oil flow stopper “4”

**CAUTION:**
Allow the damper rod to slide slowly down the inner tube “5” until it protrudes from the bottom of the inner tube. Be careful not to damage the inner tube.
2. Lubricate:
   • Inner tube’s outer surface

3. Install:
   • Inner tube
     (in the outer tube)

4. Install:
   • Copper washer
   • Damper rod bolt

5. Tighten:
   • Damper rod bolt “1”

6. Install:
   • Outer tube bushing “1”

7. Install:
   • Oil seal “1”
     (with the fork seal driver “2”)
8. Install:
   - Oil seal clip “1”

   **NOTE:**
   Adjust the oil seal clip so that it fits into the outer tube’s groove.

9. Install:
   - Dust seal “1”
     (with the fork seal driver weight “2”)

   **Fork seal driver**
   90890-01442
   Adjustable fork seal driver (36–46 mm)
   YM-01442

10. Fill:
    - Front fork leg
      (with the specified amount of the recommended fork oil)

11. Measure:
    - Front fork leg oil level “a”
      (from the top of the inner tube, with the outer tube fully compressed and without the fork spring)
      Out of specification → Correct.

   **NOTE:**
   - While filling the front fork leg, keep it upright.
   - After filling, slowly pump the front fork leg up and down to distribute the fork oil.

   **Level**
   124.0 mm (4.88 in)

12. Install:
    - Spring “1”
    - Spring seat “2”
    - Spacer
    - Cap bolt
      (with O-ring)

   **NOTE:**
   - Install the spring with the smaller pitch facing up.
   - Before installing the cap bolt, lubricate its O-ring with grease.
   - Temporarily tighten the cap bolt.

**Quantity**
571.0 cm³ (19.31 US oz) (20.10 Imp. oz)

**Recommended oil**
Fork oil 10WT
INSTALLING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

1. Install:
   - Lower front fork cover “1”
   - Front fork leg “2”
   - Upper bracket “3”
   Temporarily tighten the lower bracket pinch bolts and steering stem nut.

NOTE:
Make sure the inner tube end is flush with the top of the upper bracket.

2. Tighten:
   - Lower bracket pinch bolts

3. Remove:
   - Upper bracket

4. Tighten:
   - Lower front fork cover nuts

5. Install:
   - Upper front fork cover “1”
   - Upper bracket

NOTE:
Align the groove “a” in the upper front fork cover “1” with the lower front fork cover nut “2”.

6. Tighten:
   - Steering stem nut
   - Cap bolt
   - Upper bracket pinch bolts

NOTE:
Tighten the upper bracket pinch bolts to specification twice. Tighten the upper and lower bolts alternately, starting with the upper bolts.

• Upper bracket cover bolts

WARNING
Make sure the brake hoses are routed properly.
Removing the lower bracket

REMOVING THE LOWER BRACKET
1. Stand the vehicle on a level surface.

**WARNING**
Securely support the vehicle so that there is no danger of it falling over.

2. Remove:
   • Upper ring nut
   • Rubber washer
   • Lower ring nut “1”
   • Lower bracket

**WARNING**
Securely support the lower bracket so that there is no danger of it falling.

**NOTE:**
Remove the lower ring nut with the steering nut wrench “2”.

---

CHECKING THE STEERING HEAD
1. Wash:
   • Bearings
   • Bearing races

**Recommended cleaning solvent**
Kerosene

2. Check:
   • Bearings
   • Bearing races
   Damage/pitting → Replace.

3. Replace:
   • Bearings
   • Bearing races

---

INSTALLING THE STEERING HEAD
1. Lubricate:
   • Upper bearing
   • Lower bearing
   • Bearing races

**Recommended lubricant**
Lithium-soap-based grease
2. Install:
   • Lower ring nut “1”
   • Rubber washer “2”
   • Upper ring nut “3”
   • Lock washer “4”
   Refer to “CHECKING AND ADJUSTING THE STEERING HEAD” on page 3-25.

3. Install:
   • Front brake hose joint “1”
   • Front brake hose guide “2”

   **NOTE:**
   • Make sure that the projection “a” on the lower bracket contacts the side “b” of the front brake hose joint “1”.
   • Align the projection “c” on the front brake hose guide with the hole “d” in the lower bracket.

4. Install:
   • Front fork legs
   • Upper bracket
   Refer to “FRONT FORK” on page 4-60.

HANDLING THE REAR SHOCK ABSORBER

**WARNING**

This rear shock absorber contains highly compressed nitrogen gas. Before handling the rear shock absorber, read and make sure you understand the following information. The manufacturer cannot be held responsible for property damage or personal injury that may result from improper handling of the rear shock absorber.

- Do not tamper or attempt to open the rear shock absorber.
- Do not subject the rear shock absorber to an open flame or any other source of high heat. High heat can cause an explosion due to excessive gas pressure.
- Do not deform or damage the rear shock absorber in any way. Rear shock absorber damage will result in poor damping performance.

DISPOSING OF A REAR SHOCK ABSORBER

1. Gas pressure must be released before disposing of a rear shock absorber. To release the gas pressure, drill a 2–3 mm (0.08–0.12 in) hole through the rear shock absorber at a point 15–20 mm (0.59–0.79 in) from its end as shown.

**WARNING**

Wear eye protection to prevent eye damage from released gas or metal chips.

REMOVING THE REAR SHOCK ABSORBER ASSEMBLY AND SWINGARM

1. Stand the vehicle on a level surface.

**WARNING**

Securely support the vehicle so that there is no danger of it falling over.

### NOTE:

Place the vehicle on a suitable stand so that the rear wheel is elevated.

2. Loosen:
   - Engine mounting nut (rear lower side)
   - Refer to “ENGINE REMOVAL” on page 5-1.

### NOTE:

Because there is force being exerted on the engine mounting bracket (left and right rear lower sides), it is necessary to loosen the engine mounting nut (rear lower side) in order to create some space between the connecting arms and engine bracket before removing the rear shock absorber and swingarm.

3. Remove:
   - Connecting arm bolt (frame side)

### NOTE:

When removing the connecting arm bolt (frame side), hold the swingarm so that it does not drop down.

4. Measure:
   - Swingarm side play
   - Swingarm vertical movement

- **Pivot shaft nut**
  - 125 Nm (12.5 m·kg, 90 ft·lb)

- **Swingarm side play (at the end of the swingarm)**
  - 1.0 mm (0.04 in)

- Check the swingarm vertical movement “B” by moving the swingarm up and down. If swingarm vertical movement is not smooth or if there is binding, check the spacers, bearings, washers, and oil seals.
CHECKING THE REAR SHOCK ABSORBER ASSEMBLY
1. Check:
   • Rear shock absorber rod
     Bends/damage → Replace the rear shock absorber assembly.
   • Rear shock absorber
     Gas leaks/oil leaks → Replace the rear shock absorber assembly.
   • Spring
     Damage/wear → Replace the rear shock absorber assembly.
   • Bushing
     Damage/wear → Replace the rear shock absorber assembly.
   • Spacer
     Damage/scratches → Replace.
   • Bolts
     Bends/damage/wear → Replace.

CHECKING THE CONNECTING ARM AND RELAY ARM
1. Check:
   • Connecting arms
   • Relay arm
     Damage/wear → Replace.
2. Check:
   • Bearings
   • Oil seals
     Damage/pitting → Replace.
3. Check:
   • Bushings
     Damage/wear → Replace.
4. Check:
   • Spacers
   • Collars
     Damage/scratches → Replace.

CHECKING THE SWINGARM
1. Check:
   • Swingarm
     Bends/cracks/damage → Replace.
2. Check:
   • Pivot shaft
     Roll the pivot shaft on a flat surface.
     Bends → Replace.

WARNING
Do not attempt to straighten a bent pivot shaft.

INSTALLING THE RELAY ARM, REAR SHOCK ABSORBER ASSEMBLY AND CONNECTING ARMS
1. Lubricate:
   • Oil seals
2. Install:
   - Bearings “1”, “2”, “3” (to the relay arm)
   - Oil seals “4”, “5” (to the relay arm)

CAUTION:
When inserting the spacer into the connecting arms and the rear shock absorber, be careful not to damage the bushings and O-rings.

NOTE:
Install the bushings so that the slits “b” in the bushings are within the areas shown in the illustration.

3. Lubricate:
   - Bushings
   - Oil seals
   - O-rings
   - Collar

NOTE:
Apply grease only to the collar between the connecting arms and rear shock absorber.

4. Install:
   - Bushings “1” (to connecting arms)

Installed depth “a”
4.5 mm (0.18 in)

Installed depth “b”
1.0 mm (0.04 in)

Installed depth “c”
6.0 mm (0.24 in)

Installed depth “d”
2.5 mm (0.10 in)

A. Right side
B. Left side

3. Connecting arm
4. Rear shock absorber
   A. Right side
   B. Left side
   C. 90°

5. Install:
   - Connecting arms
   - Rear shock absorber assembly (to relay arm)
   - Relay arm (to the swingarm)

NOTE:
Be sure to face the “FWD” mark “a” on the relay arm “1” toward the front of the vehicle and to face the label “b” on the rear shock absorber “2” downward.
6. Tighten:
   • Connecting-arm-to-relay-arm nut

   **Connecting-arm-to-relay-arm nut**
   59 Nm (5.9 m·kg, 43 ft·lb)

   • Rear-shock-absorber-assembly-to-relay-arm nut

   **Rear-shock-absorber-assembly-to-relay-arm nut**
   40 Nm (4.0 m·kg, 29 ft·lb)

   • Relay-arm-to-swingarm nut

   **Relay-arm-to-swingarm nut**
   59 Nm (5.9 m·kg, 43 ft·lb)

2. Swingarm
   A. Left side
   B. Right side

3. Install:
   • Pivot shaft
   • Washer
   • Pivot shaft nut

   **NOTE:**
   Temporarily tighten the pivot shaft nut.

4. Install:
   • Connecting arm bolt (front side)

   **NOTE:**
   When installing the connecting arm bolt, hold the swingarm so that it does not drop down.

5. Tighten:
   • Pivot shaft nut
   • Engine mounting nut (rear lower side)
   • Connecting arm nut (front side)

   **Pivot shaft nut**
   125 Nm (12.5 m·kg, 90 ft·lb)

   **Engine mounting nut (rear lower side)**
   98 Nm (9.8 m·kg, 71 ft·lb)

   **Connecting arm nut (front side)**
   59 Nm (5.9 m·kg, 43 ft·lb)

6. Adjust:
   • Drive belt slack
   Refer to “ADJUSTING THE DRIVE BELT SLACK” on page 3-24.

REMOVING THE DRIVE BELT AND DRIVE PULLEY

NOTE: 
Loosen the drive pulley nut before removing the rear wheel.

1. Loosen:
   • Drive pulley nut “1”

NOTE: 
When loosening the drive pulley nut, press down on the brake pedal so the drive pulley does not move.

CHECKING THE DRIVE BELT

1. Clean:
   • Drive belt

   a. Wipe the drive belt with a clean cloth.
   b. Put the drive belt in a mixture of mild detergent and water. Then, remove any dirt from the drive belt.
   c. Remove the drive belt from the mixture and rinse it off with clean water. Then, let the drive belt thoroughly dry.

2. Check:
   • Drive belt

   CAUTION:
   • To protect the drive belt from damage, handle it with care.

   • The drive belt can not be bent smaller than 127 mm (5 in) “a”.
   • The removed drive belt can not be twisted inside out.

   a

   EAS23520

INSTALLING THE DRIVE BELT AND DRIVE PULLEY

1. Install:
   • Drive pulley “1”
   • Conical spring washer “2”
   • Drive pulley nut “3” New

   NOTE:
   Install the conical spring washer “2” with the “OUT” mark “a” facing out.

   a

   EAS23530

2. Install:
   • Drive belt

   CAUTION:
   • Install the drive belt facing the same way it was removed.
   Do not twist the drive belt when installing it.

   a

   EAS23540
3. Install:
   • Swingarm
   • Rear shock absorber
     Refer to “REAR SHOCK ABSORBER ASSEMBLY AND SWINGARM” on page 4-73.
   • Rear wheel
     Refer to “REAR WHEEL” on page 4-23.
4. Tighten:
   • Drive pulley nut

<table>
<thead>
<tr>
<th>Drive pulley nut</th>
</tr>
</thead>
<tbody>
<tr>
<td>140 Nm (14.0 m·kg, 100 ft·lb)</td>
</tr>
</tbody>
</table>

**NOTE:**
- When tightening the drive pulley nut, press down on the brake pedal so the drive pulley does not move.
- Stake the drive pulley nut “1” at a cutout “a” in the middle driven shaft.

5. Adjust:
   • Drive belt slack
     Refer to “ADJUSTING THE DRIVE BELT SLACK” on page 3-24.

For installation, reverse the removal procedure.
CHECKING THE OIL COOLER

1. Check:
   • Oil cooler fins
     Obstruction → Clean.
     Apply compressed air to the rear of the oil cooler.
     Damage → Repair or replace.
   
   NOTE: Straighten any flattened fins with a thin, flathead screwdriver.

2. Check:
   • Oil cooler inlet hose
   • Oil cooler outlet hose
     Cracks/damage → Replace.

**ENGINE REMOVAL**

5-11
REMOVING THE ENGINE

1. Loosen:
   - Spacer bolt

NOTE:

Loosen the spacer bolt with the pivot shaft wrench “1”.

3. Tighten:
   - Spacer bolt “1”

<table>
<thead>
<tr>
<th>Pivot shaft wrench</th>
<th>90890-01485</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frame mount insert wrench</td>
<td>YM-01485</td>
</tr>
</tbody>
</table>

NOTE:

- Tighten the spacer bolt “1” to specification with a pivot shaft wrench.
- When tightened, the spacer bolt should be flat against the engine surface.

INSTALLING THE ENGINE

1. Install:
   - Spacer bolt “1”
   - Engine “2”
   - Washer “3”
   - Engine mounting bolt (rear lower side) “4”
   - Engine mounting nut (rear lower side) “5”
   - Engine mounting bolt (front lower side) “6”
   - Engine mounting nut (front lower side) “7”
   - Engine brackets (rear upper side) “8”
   - Engine bracket bolts (rear upper side) “9”
   - Engine bracket nuts (rear upper side) “10”
   - Engine mounting bolt (rear upper side) “11”
   - Engine mounting nut (rear upper side) “12”
   - Engine bracket (left upper side) “13”
   - Engine mounting bolts (left upper side) “14”
   - Engine bracket bolts (left upper side) “15”
   - Engine bracket (right upper side) “16”
   - Engine mounting bolts (right upper side) “17”
   - Engine bracket bolts (right upper side) “18”

NOTE:

- Lubricate the engine mounting bolt (front lower side) threads and nut with engine oil.
- Apply locking agent (LOCTITE®) to the threads of the engine mounting bolts (left upper side).
- Do not fully tighten the bolts and nuts.

2. Remove:
   - Engine mounting nut (front lower side) “7”

4. Tighten:
   - Engine mounting nut (rear lower side) “5”
   - Engine mounting nut (front lower side) “7”
   - Engine bracket nuts (rear upper side) “10”
   - Engine mounting nut (rear upper side) “12”
   - Engine mounting bolts (left upper side) “14”
   - Engine bracket bolts (left upper side) “15”
   - Engine mounting bolts (right upper side) “17”
   - Engine bracket bolts (right upper side) “18”

<table>
<thead>
<tr>
<th>Pivot shaft wrench</th>
<th>90890-01485</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frame mount insert wrench</td>
<td>YM-01485</td>
</tr>
</tbody>
</table>
5. Install:
• Engine brackets (front upper side) “1”
• Engine bracket bolts (front upper side) “2”
• Engine bracket nuts (front upper side) “3”
• Engine cross-member bracket “4”
• Engine cross-member bracket bolts “5”
• Engine mounting bolt (front upper side) “6”
• Engine mounting nut (front upper side) “7”

**NOTE:**
Do not fully tighten the bolts and nuts.

6. Install:
• Lead holder bracket
• Lead
  (removed during engine removal)

**NOTE:**
To install and route the leads, refer to “CABLE ROUTING” on page 2-45.

Refer to “ENGINE REMOVAL” on page 5-1.

7. Install:
• Transfer gear case
• Drive pulley case
  Refer to “TRANSFER GEAR CASE” on page 5-81.

8. Install:
• Drive pulley
• Transfer gear case bracket
  Refer to “BELT DRIVE” on page 4-79.

9. Tighten:
• Engine bracket nut (front upper side) “3”
• Engine cross-member bracket bolts “5”
• Engine mounting nut (front upper side) “7”

**Engine bracket nut (front upper side)**
- 53 Nm (5.3 m-kg, 38 ft-lb)

**Engine cross-member bracket bolt**
- 30 Nm (3.0 m-kg, 22 ft-lb)

**Engine mounting nut (front upper side)**
- 98 Nm (9.8 m-kg, 71 ft-lb)
Removing the camshaft sprocket cover

Order | Job/Parts to remove | Q'ty | Remarks
--- | --- | --- | ---
1 | Spark plug cap | 4 | Disconnect.
2 | Spark plug | 4 |
3 | Shift pedal assembly | 1 |
4 | Damper cover | 1 |
5 | Damper | 1 |
6 | Timing mark accessing screw | 1 |
7 | Crankshaft end screw | 1 |
8 | Camshaft sprocket cover | 1 |
9 | Dowel pin | 2 |
10 | Camshaft sprocket cover gasket | 1 |

For installation, reverse the removal procedure.

New

Fuel tank Refer to "FUEL TANK" on page 6-1.
Air filter case Refer to "GENERAL CHASSIS" on page 4-1.
Muffler/Exhaust pipes Refer to "ENGINE REMOVAL" on page 5-1.

For installation, reverse the removal procedure.
Removing the cylinder head covers

**Order** | **Job/Parts to remove** | **Q'ty** | **Remarks**
---|---|---|---
1 | Cylinder head breather hose | 1 |  
2 | Oil tank breather hose | 1 | Disconnect.  
3 | Wire harness guide | 1 |  
4 | Fuel tank damper | 1 |  
5 | Fuel outlet hose | 1 | Disconnect.  
6 | Cylinder head cover bolt | 8 | L = 40 mm (1.57 in)  
7 | Cylinder head cover bolt | 20 | L = 60 mm (2.36 in)  
8 | Rear cylinder head cover | 1 |  
9 | Front cylinder head cover | 1 |  
10 | Cylinder head cover gasket | 2 |  
11 | Dowel pin | 4 |  

For installation, reverse the removal procedure.
# Removing the push rods and rocker arms

<td>Rear cylinder camshaft</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

For assembly, reverse the disassembly procedure.
REMOVING THE CYLINDER HEAD COVERS

1. Remove:
   - Front cylinder
   - Rear cylinder “1”

NOTE:
Due to the small clearance between the frame and the rear cylinder head cover, the three bolts “2” cannot be removed when the cover is in place. Loosen the bolts, and then remove the cover from the right side of the vehicle, making sure that the bolts do not scratch the rocker arms or other engine parts.

REMOVING THE ROCKER ARMS, PUSH RODS AND VALVE LIFTERS

1. Align:
   - TDC mark “a” on the crankshaft position sensor rotor
     (with the pointer “b” on the clutch cover)

   a. Turn the crankshaft counterclockwise.
   b. When piston #1 is at TDC on the compression stroke, align the TDC mark “a” on the crankshaft position sensor rotor with the pointer “b” on the clutch cover.
   c. Check the camshaft drive gear mark “c” position and camshaft driven gear mark “d” position as shown.

   If the marks are not aligned, turn the crankshaft counterclockwise 360 degrees and re-check step (b).

REMOVING THE CAMSHAFTS

1. Loosen:
   - Camshaft driven gear bolt “1”

NOTE:
- Place a folded copper washer “2” between the teeth of the camshaft drive gear and camshaft driven gear in order to lock them.
- Do not damage the teeth of the camshaft drive and camshaft driven gears.
2. Remove:
- Camshaft driven gear
- Straight key

**NOTE:**
Cover the crankcase hole with a clean rag to prevent the straight key from falling into the crankcase.

3. Loosen:
- Front cylinder camshaft gear bolt “1”

**NOTE:**
- Place a folded copper washer “2” between the teeth of the front cylinder camshaft gear and rear cylinder camshaft gear in order to lock them.
- Do not damage the teeth of the front cylinder camshaft and rear cylinder camshaft gears.

4. Remove:
- Rear cylinder camshaft gear
- Front cylinder camshaft gear
- Straight key

**NOTE:**
Cover the crankcase hole with a clean rag to prevent the straight key from falling into the crankcase.

5. Loosen:
- Camshaft drive gear bolt “1”
- Right balancer driven gear bolt “2”

**NOTE:**
- Place a folded copper washer “3” between the teeth of the right balancer drive gear and right balancer driven gear in order to lock them.
- Place a folded copper washer “4” between the teeth of the right balancer drive gear and right balancer driven gear in order to lock them.
- Do not damage the teeth of the right balancer drive and right balancer driven gears.

6. Remove:
- Right balancer driven gear
- Camshaft drive gear
- Right balancer drive gear
- Straight keys

**NOTE:**
Cover the crankcase hole with a clean rag to prevent the straight keys from falling into the crankcase.

7. Remove:
- Oil delivery pipe 1 “1”
- Camshaft cover “2”

**NOTE:**
Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern. After all of the bolts are fully loosened, remove them.
CHECKING THE CAMSHAFTS

1. Check:
   • Cam
     Blue discoloration/pitting/scratches → Replace the camshaft.

2. Measure:
   • Cam dimensions A “a” and B “b”
     Out of specification → Replace the camshaft.

   **Camshaft lobe dimensions**
   - Intake A
     42.532–42.632 mm (1.6745–1.6784 in)
     Limit 42.432 mm (1.6705 in)
   - Intake B
     35.950–36.050 mm (1.4154–1.4193 in)
     Limit 35.850 mm (1.4114 in)
   - Exhaust A
     42.530–42.630 mm (1.6744–1.6783 in) (cylinder #1)
     42.531–42.631 mm (1.6744–1.6784 in) (cylinder #2)
     Limit 42.430 mm (1.6705 in) (cylinder #1)
     42.431 mm (1.6705 in) (cylinder #2)
   - Exhaust B
     35.950–36.050 mm (1.4154–1.4193 in)
     Limit 35.850 mm (1.4114 in)

3. Measure:
   • Camshaft journal diameter (crankcase side) “a”
     Out of specification → Replace the camshaft.

   **Camshaft journal diameter (crankcase side)**
   24.957–24.980 mm (0.9826–0.9835 in)

4. Measure:
   • Camshaft journal diameter (camshaft cover side) “a”
     Out of specification → Replace the camshaft.

   **Camshaft journal diameter (camshaft cover side)**
   27.957–27.980 mm (1.1007–1.1016 in)
5. Measure:
   - Crankcase hole inside diameter “a”
   Out of specification → Replace the crankcase.

6. Measure:
   - Camshaft cover hole inside diameter “a”
   Out of specification → Replace the camshaft cover.

7. Calculate:
   - Camshaft-to-crankcase clearance
   Out of specification → Replace the defective part(s).

8. Calculate:
   - Camshaft to camshaft cover clearance
   Out of specification → Replace the defective part(s).

NOTE:
Calculate the clearance by subtracting the camshaft journal diameter (crankcase side) from the crankcase hole inside diameter.

Camshaft to crankcase clearance
0.020–0.064 mm (0.0008–0.0025 in)

9. Check:
   - Camshaft drive gears
   - Camshaft driven gears
   - Front cylinder camshaft gears
   - Rear cylinder camshaft gears
   Chips/pitting/roughness/wear → Replace the defective part(s).

CHECKING THE ROCKER ARMS AND ROCKERS ARM SHAFTS
The following procedure applies to all of the rocker arms and rocker arm shafts.

1. Check:
   - Rocker arm
   Damage/wear → Replace.

2. Check:
   - Rocker arm shaft
   Blue discoloration/excessive wear/pitting/scratches → Replace or check the lubrication system.

3. Measure:
   - Rocker arm inside diameter “a”
   Out of specification → Replace.

Rocker arm inside diameter
18.000–18.018 mm (0.7087–0.7094 in)
4. Measure:
   • Rocker arm shaft outside diameter “a”
     Out of specification → Replace.

   **Rocker arm shaft outside diameter**
   17.976–17.991 mm (0.7077–0.7083 in)

5. Calculate:
   • Rocker arm to rocker arm shaft clearance

   **NOTE:**
   Calculate the clearance by subtracting the rocker arm shaft outside diameter from the rocker arm inside diameter.

   Above 0.08 mm (0.003 in) → Replace the defective part(s).

   **Rocker-arm-to-rocker-arm-shaft clearance**
   0.009–0.042 mm (0.0004–0.0017 in)

---

**CHECKING THE VALVE LIFTERS AND VALVE LIFTER CASES**

1. Check:
   • Valve lifter
     Blue discoloration/excessive wear/pitting/scratches → Replace and check the lubrication system.

2. Check:
   • Valve lifter case “1”
     Damage/wear → Replace the valve lifter case.
   • O-rings “2”
     Damage/wear → Replace the O-ring.

3. Measure:
   • Valve lifter outside diameter “a”
     Out of specification → Replace.

---

**CHECKING THE ROCKER ARM BASES**

1. Check:
   • Rocker arm base
     Cracks/damage → Replace.

**CHECKING THE PUSH RODS**

1. Check:
   • Push rod
CAMSHAFTS

Valve lifter outside diameter (intake)
22.962–22.974 mm (0.9040–0.9045 in)
Valve lifter outside diameter (exhaust)
22.962–22.974 mm (0.9040–0.9045 in)

Valve-lifter-to-valve-lifter-hole clearance
0.026–0.059 mm (0.0010–0.0023 in)

4. Measure:
• Valve lifter case inside diameter “a”
Out of specification → Replace.

5. Calculate:
• Valve lifter-to-valve lifter case clearance
NOTE: ______________________________
Calculate the clearance by subtracting the valve lifter outside diameter from the valve lifter case inside diameter.

Above 0.072 mm (0.0028 in) → Replace the defective part(s).

CHECKING THE PUSH ROD COVER
1. Check:
• Push rod cover
  Cranks/damage → Replace.
• Seal
• O-ring
  Damage/wear → Replace the seal and O-ring as a set.

CHECKING THE DECOMPRESSION SYSTEM
1. Check:
• Decompression system

NOTE: ______________________________
• Check that the decompression pin “1” projects from the camshaft.
• Check that the decompression cam “2” and decompression pin “1” moves smoothly.

2. Check:
• Decompression cam
• Decompression pin
  Damage/wear → Replace.

CHECKING THE DECOMPRESSION CAM SPRING
The following procedure applies to all of the decompression cam springs.
1. Measure:
• Decompression cam spring free length “a”
Out of specification → Replace the decompression cam spring.
**CAMSHAFTS**

### Checking the Oil Delivery Pipe

1. **Check:**
   - Oil delivery pipe 1
     - Damage → Replace.
     - Obstruction → Wash and blow out with compressed air.
   - O-rings
     - Damage/wear → Replace.

2. **Measure:**
   - Compressed decompression cam spring force “a”
     - Out of specification → Replace the decompression cam spring.

### Installing the Camshafts

1. **Install:**
   - Camshafts

2. **Install:**
   - Camshaft cover 1 “1”
   - Oil delivery pipe 1 “2”

3. **Install:**
   - Straight keys
   - Right balancer drive gear “1”
   - Right balancer driven gear “2”
   - Camshaft driven gear

4. **Tighten:**
   - Camshaft drive gear bolt “1”
   - Right balancer driven gear bolt “2”

---

**Decompression cam spring**

- **Free length**
  - 20.0 mm (0.79 in)
- **Limit**
  - 19.0 mm (0.75 in)

---

**Installed compression spring force**

- 0.1335–0.1631 N (0.0300–0.0367 lb) (0.0136–0.0166 kgf)
- **Installed length**
  - 8.0 mm (0.31 in)

---

**Installed length**

- 2

---

**Decompression cam spring**

- **Free length**
  - 20.0 mm (0.79 in)
- **Limit**
  - 19.0 mm (0.75 in)
**NOTE:**

- Lubricate the camshaft drive gear bolt and right balancer driven gear bolt threads with engine oil.
- Place a folded copper washer “3” between the teeth of the right balancer drive gear and right balancer driven gear in order to lock them.
- Place a folded copper washer “4” between the teeth of the right balancer drive gear and right balancer driven gear in order to lock them.
- Do not damage the teeth of the right balancer drive and right balancer driven gears.
- After tightening the camshaft driven gear bolt, remove the copper washer to clean the teeth of the right balancer drive gear and right balancer driven gear.

5. Install:
- Rear cylinder camshaft gear “1”
- Front cylinder camshaft gear “2”
- Washer “3”
- Conical spring washer “4”
- Washer “5”
- Circlip “6” New

**NOTE:**

- Align the projection “a” on the washer “3” with the punch mark “b” on the front cylinder camshaft gear.
- Install the conical spring washer “4” as shown in the illustration.
- Lubricate the front cylinder camshaft gear bolt threads with engine oil.

6. Tighten:
- Front cylinder camshaft gear bolt “1”

**NOTE:**

- Place a folded copper washer “2” between the teeth of the front cylinder camshaft gear and rear cylinder camshaft gear in order to lock them.
- Do not damage the teeth of the front cylinder camshaft and rear cylinder camshaft gears.
- After tightening the front cylinder camshaft gear bolt, remove the copper washer to clean the teeth of the front cylinder camshaft gear and rear cylinder camshaft gears.
7. Install:
• Straight key
• Camshaft driven gear “1”

**NOTE:**
• Cover the crankcase hole with a clean rag to prevent the straight key from falling into the crankcase.
• Align the punch mark “a” on the camshaft driven gear “1” with the punch mark “b” on the camshaft drive gear “2”.
• Insert a cross-headed screwdriver into one of the holes in the outer camshaft driven gear and rotate the gear until the teeth of both driven gears are aligned. The teeth of both camshaft driven gears must be aligned for installation.

8. Tighten:
• Camshaft driven gear bolt “1”

**NOTE:**
• Place a folded copper washer “2” between the teeth of the camshaft drive gear and camshaft driven gear in order to lock them.
• Do not damage the teeth of the camshaft drive and camshaft driven gears.
• After tightening the camshaft driven gear bolt, remove the copper washer to clean the teeth of the camshaft drive and camshaft driven gears.

---

**BLEEDING A VALVE LIFTER**

A valve lifter must be bled in the following cases.
• When installing a new valve lifter
• When the valve lifter leaks oil

1. Bleed:
   • Valve lifter

```
\[\text{\textbullet~ Fill a container with kerosene and place the valve lifter into the container as shown.}
\text{\textbullet~ Pump the plunger side of the valve lifter with a press a number of times to let in kerosene.}
\]
```

**CAUTION:**
• Do not pump the valve lifter excessively.
• Kerosene is highly flammable.
Be sure to install the valve lifter in its appropriate position.

c. Start the engine and warm it up.
d. Stop the engine.
e. Remove the camshaft sprocket cover.
f. Rotate the camshaft until the punch mark “1” on the camshaft driven gear aligns with the punch mark on the camshaft drive gear as shown. This is the condition in which piston #1 is at top dead center (TDC).

**NOTE:**
The crankshaft can be rotated smoothly when the spark plugs are removed.

**WARNING**
Be careful since the engine is hot.

g. With piston #1 at TDC, count the indicated number of gear teeth and place marks “2” through “5” on the camshaft driven gear as shown. When these marks align between the centers of the camshaft drive and driven gears, the corresponding valve lifter is at its highest point.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |

**h.** Rotate the crankshaft until the mark (on the camshaft driven gear) for the valve lifter to be bled aligns with the camshaft drive gear as shown. Example:
For bleeding the cylinder #2 intake valve lifter, align mark “2” as shown.

**i.** Leave the camshaft drive and driven gears aligned for five minutes to allow the valve lifter to bleed.

**j.** If necessary, repeat steps (h) and (i) to bleed other valve lifters.

**INSTALLING THE VALVE LIFTERS**

1. Piston #1 TDC punch mark
2. Cylinder #2 intake valve at its highest point
3. Cylinder #1 exhaust valve at its highest point
4. Cylinder #1 intake valve at its highest point
5. Cylinder #2 exhaust valve at its highest point

**NOTE:**
- Install the valve lifter in the correct place.
- After installing the valve lifters, fill the tops of them with engine oil.
2. Install:
- Push rod covers “1”

Note:
Install the push rod covers so that their paint marks “a” are facing towards the cylinder heads.

EAS04070

Installing the Rocker Arms and Push Rods
The following procedure applies to both cylinders.

1. Install:
- Rocker arms “1”
- Rocker arm shafts “2”
  (onto rocker arm base)

Note:
The thread hole “a” of the rocker arm shaft must face to the outside.

2. Install:
- Rocker arm base
  (with rocker arms)
- Push rods

Note:
- Be sure to correctly install the push rods between the rocker arms and valve lifters as shown. The illustration is viewed from the right side of the vehicle.
- The lengths of push rod 1 and push rod 2 are different. Therefore, be sure to install them in the proper position.
- Lubricate the push rod end balls with engine oil.

A. Rear cylinder
B. Front cylinder
1. Exhaust side rocker arm
2. Intake side rocker arm
3. Exhaust valve lifter
4. Intake valve lifter
5. Push rod 1 l = 286.5 mm (11.280 in)
6. Push rod 2 l = 288.5 mm (11.358 in)

c. Install the rocker arm base bolts (M6) “1” and rocker arm base bolts (M8) “2” and “3”.

Note:
Tighten the rocker arm base bolts in stages and in a crisscross pattern.

Rocker arm base bolt (M6)
10 Nm (1.0 m·kg, 7.2 ft·lb)
Rocker arm base bolt (M8)
24 Nm (2.4 m·kg, 17ft·lb)
Bolts “2”: l = 45 mm (1.77 in)
Bolts “3”: l = 70 mm (2.76 in)

Bolts “4”: l = 40 mm (1.57 in)
Bolts “5”: l = 60 mm (2.36 in)

INSTALLING THE CYLINDER HEAD COVERS

1. Install:
   • Rear cylinder head cover “1”
   • Front cylinder head cover “2”

NOTE:
Due to the small clearance between the frame and the rear cylinder head cover, the three bolts “3” cannot be installed when the cover is in place. Set the bolts in the cylinder head cover, and then install the cover from the right side of the vehicle.

INSTALLING THE SHIFT PEDAL ASSEMBLY

1. Install:
   • Shift pedal assembly “1”

NOTE:
Align the mark “a” on the shift pedal shaft with the slot in the shift pedal.
Removing the cylinder heads

CYLINDER HEADS

REMOVING THE CYLINDER HEADS

1. Remove:
   • Cylinder head nuts

NOTE:____________________________________________________
   • Loosen the nuts in the proper sequence as shown.
   • Loosen each nut 1/2 of a turn at a time. After all of the nuts are fully loosened, remove them.

A

2. Check:
   • Cylinder head
     Damage/scratches → Replace.

3. Measure:
   • Cylinder head warpage
     Out of specification → Resurface the cylinder head.

Warpage limit
0.03 mm (0.0012 in)

A. Front cylinder
B. Rear cylinder

CHECKING THE CYLINDER HEADS

The following procedure applies to all of the cylinder heads.

1. Eliminate:
   • Combustion chamber carbon deposits
     (with a rounded scraper)

NOTE:____________________________________________________
Do not use a sharp instrument to avoid damaging or scratching:
• Spark plug bore threads
• Valve seats

A. Front cylinder
B. Rear cylinder

B

CHECKING THE OIL PIPE

1. Check:
   • Oil pipe 1
     Damage → Replace.
     Obstruction → Wash and blow out with compressed air.
INSTALLING THE CYLINDER HEADS

1. Install:
   • Cylinder head gasket “1” New
   • Dowel pins “2”

   **NOTE:**
   The “1D7” mark on the cylinder head gasket must face up and towards the left side of the cylinder.

2. Install:
   • Cylinder heads
   • Washers
   • Cylinder head nuts

   **NOTE:**
   Lubricate the cylinder head nuts and washers with engine oil.

3. Tighten:
   • Cylinder head nuts

   **NOTE:**
   Tighten the cylinder head nuts in the proper tightening sequence as shown and torque them in two stages.

4. Install:
   • Copper washers New
   • Oil pipe 1
   • Oil pipe union bolt (M8)

   **NOTE:**
   Tighten the three union bolts evenly, and then torque them to specification.

5. Install:
   • Engine bracket (right upper side)
   • Engine bracket bolts (right upper side)
   • Engine mounting bolts (right upper side)
   • Engine bracket (left upper side)
   • Engine bracket bolts (left upper side)
   • Engine mounting bolts (left upper side)

   **NOTE:**
   Apply locking agent (LOCTITE®) to the threads of the engine mounting bolts (left upper side).

   • Do not fully tighten the bolts.

6. Tighten:
   • Engine mounting bolts (right upper side)
   • Engine mounting bolts (left upper side)
   • Engine bracket bolts (right upper side)
   • Engine bracket bolts (left upper side)

Note: New parts are indicated by the symbol "New."
REMOVING THE VALVES
The following procedure applies to all of the valves and related components.

NOTE: 
Before removing the internal parts of the cylinder head (e.g., valves, valve springs, valve seats), make sure the valves properly seal.

1. Check:
   • Valve sealing
     Leakage at the valve seat → Check the valve face, valve seat, and valve seat width.
     Refer to “CHECKING THE VALVE SEATS” on page 5-41.

   a. Pour a clean solvent “a” into the intake and exhaust ports.
   b. Check that the valves properly seal.

   NOTE: 
   There should be no leakage at the valve seat “1”.

3. Remove:
   • Upper spring seat “1”
   • Valve spring “2”
   • Valve “3”
   • Valve stem seal “4”
   • Lower spring seat “5”

   NOTE: 
   Identify the position of each part very carefully so that it can be reinstalled in its original place.

CHECKING THE VALVES AND VALVE GUIDES
The following procedure applies to all of the valves and valve guides.

1. Measure:
   • Valve-stem-to-valve-guide clearance
     Out of specification → Replace the valve guide.

   • Valve-stem-to-valve-guide clearance =
     Valve guide inside diameter “a” - Valve stem diameter “b”
2. Replace:

- Valve guide

**NOTE:**
To ease valve guide removal and installation, and to maintain the correct fit, heat the cylinder head to 100 °C (212 °F) in an oven.

- Carbon deposits
  (from the valve face and valve seat)

3. Eliminate:

4. Check:

- Valve face
  Pitting/wear → Grind the valve face.
- Valve stem end
  Mushroom shape or diameter larger than the body of the valve stem → Replace the valve.

5. Measure:
- Valve margin thickness D “a”
  Out of specification → Replace the valve.

### Valve margin thickness D (intake)
1.15–1.45 mm (0.0453–0.0571 in)
Limit
0.4 mm (0.02 in)

### Valve margin thickness D (exhaust)
1.15–1.45 mm (0.0453–0.0571 in)
Limit
0.4 mm (0.02 in)

6. Measure:
- Valve stem runout
  Out of specification → Replace the valve.

#### Valve stem runout
0.010 mm (0.0004 in)

**NOTE:**

- When installing a new valve, always replace the valve guide.
- If the valve is removed or replaced, always replace the valve stem seal.

**CHECKING THE VALVE SEATS**
The following procedure applies to all of the valves and valve seats.

1. Eliminate:
   - Carbon deposits
     (from the valve face and valve seat)

2. Check:
   - Valve seat
     Pitting/wear → Replace the cylinder head.

3. Measure:
   - Valve seat width C “a”
     Out of specification → Replace the cylinder head.

### Valve seat width C (intake)
1.10–1.30 mm (0.0433–0.0512 in)
Limit
2.0 mm (0.08 in)

### Valve seat width C (exhaust)
1.10–1.30 mm (0.0433–0.0512 in)
Limit
2.0 mm (0.08 in)

---

**a.** Apply Mechanic’s blueing dye (Dykem) “b” onto the valve face.

**b.** Install the valve into the cylinder head.

**c.** Press the valve through the valve guide and onto the valve seat to make a clear impression.

**d.** Measure the valve seat width.

**NOTE:**
Where the valve seat and valve face contacted one another, the blueing will have been removed.
4. Lap:
   • Valve face
   • Valve seat

NOTE: After replacing the cylinder head or replacing the valve and valve guide, the valve seat and valve face should be lapped.

a. Apply a coarse lapping compound “a” to the valve face.

CAUTION: Do not let the lapping compound enter the gap between the valve stem and the valve guide.

b. Apply molybdenum disulfide oil onto the valve stem.

c. Install the valve into the cylinder head.

d. Turn the valve until the valve face and valve seat are evenly polished, then clean off all of the lapping compound.

NOTE: For the best lapping results, lightly tap the valve seat while rotating the valve back and forth between your hands.

e. Apply a fine lapping compound to the valve face and repeat the above steps.

f. After every lapping procedure, be sure to clean off all of the lapping compound from the valve face and valve seat.

g. Apply Mechanic’s blueing dye (Dykem) “b” onto the valve face.

h. Install the valve into the cylinder head.

i. Press the valve through the valve guide and onto the valve seat to make a clear impression.

j. Measure the valve seat width “c” again. If the valve seat width is out of specification, reface and lap the valve seat.

CHECKING THE VALVE SPRINGS
The following procedure applies to all of the valve springs.

1. Measure:
   • Valve spring free length “a”
     Out of specification → Replace the valve spring.
VALVES AND VALVE SPRINGS

**2. Measure:**
- Compressed valve spring force “a”
  Out of specification → Replace the valve spring.

**EAS24340**

**INSTALLING THE VALVES**
The following procedure applies to all of the valves and related components.

1. **Deburr:**
   - Valve stem end
     (with an oil stone)

**Installed compression spring force (intake)**
- 217.00–249.00 N (48.78–55.98 lb)
  (22.13–25.39 kgf)

**Installed compression spring force (exhaust)**
- 217.00–249.00 N (48.78–55.98 lb)
  (22.13–25.39 kgf)

**Installed length (intake)**
- 32.66 mm (1.29 in)

**Installed length (exhaust)**
- 32.66 mm (1.29 in)

2. **Lubricate:**
   - Valve stem “1”
   - Valve stem seal “2”
     (with the recommended lubricant)

**Recommended lubricant**
Molybdenum disulfide oil

- Valve guide “1”

**Free length (intake)**
- 46.71 mm (1.84 in)
  
**Limit**
- 44.71 mm (1.76 in)

**Free length (exhaust)**
- 46.71 mm (1.84 in)
  
**Limit**
- 44.71 mm (1.76 in)

**Spring tilt (intake)**
- 2.5°/2.0 mm

**Spring tilt (exhaust)**
- 2.5°/2.0 mm
• Lower spring seat “2”
• Valve stem seal “3”
• Valve “4”
• Valve spring “5”
• Upper spring seat “6” (into the cylinder head)

**NOTE:**
- Make sure each valve is installed in its original place.
- Install the valve springs with the larger pitch “a” facing up.

5. To secure the valve cotters onto the valve stem, lightly tap the valve tip with a soft-face hammer.

**CAUTION:**
Hitting the valve tip with excessive force could damage the valve.

4. Install:
- Valve cotters

**NOTE:**
Install the valve cotters by compressing the valve springs with the valve spring compressor set “1”.

Refer to “CYLINDER HEADS” on page 5-33.
REMOVING THE PISTON

1. Remove:
   • Piston pin clips “1”
   • Piston pin “2”
   • Piston “3”

CAUTION:
Do not use a hammer to drive the piston pin out.

NOTE:
• Before removing the piston pin clip, cover the crankcase opening with a clean rag to prevent the piston pin clip from falling into the crankcase.
• For reference during installation, put an identification mark on each piston crown.
• Before removing the piston pin, deburr the piston pin clip’s groove and the piston’s pin bore area. If both areas are deburred and the piston pin is still difficult to remove, remove it with the piston pin puller set “4”.

2. Remove:
   • Top ring
   • 2nd ring
   • Oil ring

NOTE:
When removing a piston ring, open the end gap with your fingers and lift the other side of the ring over the piston crown.

CHECKING THE CYLINDERS AND PISTONS

The following procedure applies to all of the cylinders and pistons.

1. Check:
   • Piston wall
   • Cylinder wall
   Vertical scratches → Rebore or replace the cylinder, and replace the piston and piston rings as a set.

2. Measure:
   • Piston-to-cylinder clearance

   ![Diagram]

   Piston pin puller set
   90890-01304
   Piston pin puller
   YU-01304

   Bore
   100.000–100.010 mm (3.9370–3.9374 in)
   Taper limit
   0.050 mm (0.0020 in)
   Out of round limit
   0.050 mm (0.0020 in)

   “C” = maximum of D₁–D₆
   “T” = maximum of D₁ or D₂ - maximum of D₅ or D₆
   “R” = maximum of D₁, D₃ or D₅ - minimum of D₂, D₄ or D₆

   Measure cylinder bore “C” by taking side-to-side and front-to-back measurements of the cylinder. Then, find the average of the measurements.
b. If out of specification, rebore or replace the cylinder, and replace the piston and piston rings as a set.

c. Measure piston skirt diameter D “a” with the micrometer.

### Piston

| Diameter D | 99.960–99.975 mm (3.9354–3.9360 in) |

b. 10 mm (0.39 in) from the bottom edge of the piston
d. If out of specification, replace the piston and piston rings as a set.
e. Calculate the piston-to-cylinder clearance with the following formula.

• Piston-to-cylinder clearance = Cylinder bore “C” - Piston skirt diameter “D”

### Piston-to-cylinder clearance

| 0.025–0.050 mm (0.0010–0.0020 in) |
| Limit | 0.15 mm (0.0059 in) |

f. If out of specification, rebore or replace the cylinder, and replace the piston and piston rings as a set.

### CHECKING THE PISTON RINGS

1. Measure:
   - Piston ring side clearance
     Out of specification → Replace the piston and piston rings as a set.

   **NOTE:**
   Before measuring the piston ring side clearance, eliminate any carbon deposits from the piston ring grooves and piston rings.

   **Piston ring**

</tr>
</tbody>
</table>

2. Install:
   - Piston ring 
     (into the cylinder)

   **NOTE:**
   Level the piston ring into the cylinder with the piston crown.

a. 10 mm (0.39 in)
3. Measure:
   • Piston ring end gap
     Out of specification → Replace the piston ring.

NOTE:
The oil ring expander spacer’s end gap cannot be measured. If the oil ring rail’s gap is excessive, replace all three piston rings.

CHECKING THE PISTON PINS
The following procedure applies to all of the piston pins.
1. Check:
   • Piston pin
     Blue discoloration/grooves → Replace the piston pin and then check the lubrication system.
2. Measure:
   • Piston pin outside diameter “a”
     Out of specification → Replace the piston pin.

<table>
<thead>
<tr>
<th>Piston pin outside diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>22.991–23.000 mm (0.9052–0.9055 in)</td>
</tr>
<tr>
<td>Limit</td>
</tr>
</tbody>
</table>

3. Measure:
   • Piston pin bore diameter “b”
     Out of specification → Replace the piston.

<table>
<thead>
<tr>
<th>Piston pin bore inside diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>23.004–23.015 mm (0.9057–0.9061 in)</td>
</tr>
<tr>
<td>Limit</td>
</tr>
</tbody>
</table>

4. Calculate:
   • Piston-pin-to-piston-pin-bore clearance
     Out of specification → Replace the piston pin and piston as a set.

<table>
<thead>
<tr>
<th>Piston-pin-to-piston-pin-bore clearance</th>

EAS24460

INSTALLING THE PISTONS AND CYLINDERS
The following procedure applies to all of the pistons and cylinders.
1. Install:
   • Top ring “1”
   • 2nd ring “2”
   • Lower oil ring rail “3”
   • Upper oil ring rail “4”
2. Install:
   - Piston “1”
   - Piston pin “2”
   - Piston pin clips “3” New

   NOTE:
   - Apply engine oil onto the piston pin.
   - Make sure the arrow mark “a” on the piston faces towards the front of the vehicle.
   - Before installing the piston pin clips, cover the crankcase opening with a clean rag to prevent the clip from falling into the crankcase.
   - Install the piston pin clips, so that the clip ends are 3 mm (0.12 in) “b” or more from the cutout in the piston.
   - Reinstall each piston into its original cylinder (numbering order starting from the left: #1 to #2).

3. Lubricate:
   - Piston
   - Piston rings
   - Cylinder
   (with the recommended lubricant)

   Recommended lubricant
   Engine oil

4. Offset:
   - Piston ring end gaps

   a. Top ring
   b. Upper oil ring rail
   c. Oil ring expander
   d. Lower oil ring rail
   e. 2nd ring
   A. forward

5. Install:
   - Cylinder “1”

   NOTE:
   While compressing the piston rings with one hand, install the cylinder with the other hand.

6 Nm (0.6 m·kg, 4.3 ft·lb)
REMOVING THE CLUTCH

1. Loosen:
   • Clutch boss nut “1”

NOTE: ______________________________________________________
While holding the clutch boss “2” with the universal clutch holder “3”, loosen the clutch boss nut.

2. Remove:
   • Clutch boss nut “1”
   • Conical spring washer “2”
   • Washer “3”
   • Clutch boss assembly “4”

NOTE: ______________________________________________________
There is a built-in damper between the clutch boss and the clutch plate. It is not necessary to remove the wire circlip “5” and disassemble the built-in damper unless there is serious clutch chattering.

REMOVING THE PRIMARY DRIVE GEAR

1. Loosen:
   • Primary drive gear bolt “1”

NOTE: ______________________________________________________
While holding the generator rotor “2” with the sheave holder “3”, loosen the primary drive gear bolt.

REMOVING THE LEFT BALANCER DRIVE GEAR

1. Loosen:
   • Left balancer drive gear bolt “1”

NOTE: ______________________________________________________
While holding the generator rotor “2” with the primary sheave holder “3”, loosen the left balancer drive gear bolt.
CHECKING THE FRICTION PLATES

The following procedure applies to all of the friction plates.
1. Check:
   • Friction plate
     Damage/wear → Replace the friction plates as a set.
2. Measure:
   • Friction plate thickness
     Out of specification → Replace the friction plates as a set.

NOTE: Measure the friction plate at four places.

Friction plate 1, 3 thickness
2.90–3.10 mm (0.114–0.122 in)
   Wear limit
   2.80 mm (0.110 in)
Friction plate 2 thickness
2.92–3.08 mm (0.115–0.121 in)
   Wear limit
   2.82 mm (0.111 in)

CHECKING THE CLUTCH PLATES

The following procedure applies to all of the clutch plates.
1. Check:
   • Clutch plate
     Damage → Replace the clutch plates as a set.
2. Measure:
   • Clutch plate warpage
     (with a surface plate and thickness gauge “1”) Out of specification → Replace the clutch plates as a set.

Clutch plate thickness
1.90–2.10 mm (0.075–0.083 in)
   Warpage limit
   0.20 mm (0.0079 in)

CHECKING THE CLUTCH SPRING PLATE

1. Check:
   • Clutch spring plate
     Damage → Replace.
2. Check:
  • Clutch spring plate seat
  Damage → Replace.

EAS25150
CHECKING THE CLUTCH HOUSING
1. Check:
  • Clutch housing dogs
  Damage/pitting/wear → Deburr the clutch housing dogs or replace the clutch housing.

NOTE: Pitting on the clutch housing dogs will cause erratic clutch operation.

2. Check:
  • Bearing
  Damage/wear → Replace.

EAS25160
CHECKING THE CLUTCH BOSS
1. Check:
  • Clutch boss splines
  Damage/pitting/wear → Replace the clutch boss.

NOTE: Pitting on the clutch boss splines will cause erratic clutch operation.

EAS25170
CHECKING THE PRESSURE PLATE
1. Check:
  • Pressure plate
  Cracks/damage → Replace.

ET1D71033
CHECKING THE LEFT BALANCER GEARS
1. Check:
  • Left balancer drive gear
• Left balancer driven gear
• Left balancer idle gear
  Burrs/chips/roughness/wear → Replace the defective part(s).

2. Measure:
• Left balancer driven gear inside diameter “a”
  Out of specification → Replace.

<table>
<thead>
<tr>
<th>Left balancer driven gear inside diameter “a”</th>
</tr>
</thead>
<tbody>
<tr>
<td>59.010–59.028 mm (2.323–2.324 in)</td>
</tr>
<tr>
<td>Limit</td>
</tr>
<tr>
<td>59.100 mm (2.327 in)</td>
</tr>
</tbody>
</table>

3. Measure:
• Left balancer driven gear housing outside diameter “a”
  Out of specification → Replace.

<table>
<thead>
<tr>
<th>Left balancer driven gear housing outside diameter “a”</th>
</tr>
</thead>
<tbody>
<tr>
<td>58.925–58.960 mm (2.320–2.321 in)</td>
</tr>
<tr>
<td>Limit</td>
</tr>
<tr>
<td>58.900 mm (2.318 in)</td>
</tr>
</tbody>
</table>

4. Calculate:
• Left-balancer-driven-gear-to-left-balancer-driven-gear-housing clearance
  Out of specification → Replace the defective part(s).

NOTE: Calculate the clearance by subtracting the left balancer driven gear housing outside diameter from the left balancer driven gear inside diameter.

<table>
<thead>
<tr>
<th>Left-balancer-driven-gear-to-left-balancer-driven-gear-housing clearance</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.050–0.103 mm (0.0020–0.0041 in)</td>
</tr>
</tbody>
</table>

ET10010202
INSTALLING THE LEFT BALANCER DRIVE GEAR

1. Install:
• Left balancer weight 1 “1”
• Left balancer weight 2 “2”
• Left balancer driven gear “3”

NOTE: Make sure that the punch marks “a” on the left balancer driven gear are facing toward left balancer weight 2.

<table>
<thead>
<tr>
<th>Left balancer weight bolt</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 Nm (1.0 m·kg, 7.2 ft·lb)</td>
</tr>
</tbody>
</table>

LOCTITE®

2. Install:
• Left balancer drive gear “1”
• Left balancer idle gear “2”
• Left balancer driven gear “3”

NOTE: 
• Align the punch mark “a” on the left balancer drive gear with the punch mark “b” on the left balancer idle gear.
• Align the punch marks “c” on the left balancer idle gear with the punch marks “d” on the left balancer driven gear.
3. Tighten:
   • Left balancer drive gear bolt “1”

   **Left balancer drive gear bolt**
   40 Nm (4.0 m·kg, 29 ft·lb)

   **NOTE:**
   While holding the generator rotor “2” with the sheave holder “3”, tighten the left balancer drive gear bolt.

   **Sheave holder**
   90890-01701
   Primary clutch holder
   YS-01880-A

   **CAUTION:**
   The timing marks on the crankshaft position sensor rotor must face outside.

   **NOTE:**
   • Lubricate the primary drive gear bolt threads with engine oil.
   • While holding the generator rotor “3” with the sheave holder “4”, tighten the primary drive gear bolt.

   **Sheave holder**
   90890-01701
   Primary clutch holder
   YS-01880-A

**INSTALLING THE PRIMARY DRIVE GEAR**
1. Install:
   • Washer
   • Straight key
   • Primary drive gear

**NOTE:**
• Lubricate the clutch housing bearings with engine oil.
• Make sure that the primary driven gear teeth and primary drive gear teeth mesh correctly.
• Make sure that the primary driven gear teeth and oil pump driven gear teeth mesh correctly.

2. Install:
• Clutch boss assembly “1”

**NOTE:**
• Install the clutch damper spring “2” with the “OUTSIDE” mark facing out.
• If the wire circlip “3” has been removed, carefully install a new one.

3. Install:
• Clutch boss “1”
• Washer
• Conical spring washer “2”
• Clutch boss nut “3”

**NOTE:**
• Lubricate the clutch boss nut threads and conical spring washer mating surfaces with engine oil.
• Install the conical spring washer “2” with the “OUT” mark “a” facing out.
• While holding the clutch boss with the universal clutch holder “4”, tighten the clutch boss nut.
• Stake the clutch boss nut “3” at a cutout “b” in the main axle.

---

![Diagram of clutch assembly]

**Recommended lubricant**
- Engine oil

4. Lubricate:
• Friction plates
• Clutch plates
  (with the recommended lubricant)

5. Install:
• Friction plates 2 “1”
• Clutch plates
• Friction plate 1 “2”

**NOTE:**
• First, install a friction plate and then alternate between a clutch plate and a friction plate.
• Align a projection on each friction plate 2 “1” with the “△” mark “a” on the clutch housing and align a projection on friction plate 1 “2” with the punch mark “b” on the housing.

---

6. Install:
• Clutch spring plate
• Clutch spring plate retainer

**NOTE:**
Tighten the clutch spring plate retainer bolts in stages and in a crisscross pattern.
7. Apply:
   • Sealant
     (onto the crankshaft position sensor lead grommet)

   [Image of a screwdriver and a grommet]

Yamaha bond No. 1215
90890-85505
(Three Bond No.1215®)

8. Install:
   • Shift arm “1”

   [Image of a shift arm and a bolt]

   Shift arm bolt
   12 Nm (1.2 m·kg, 8.7 ft·lb)

   NOTE:
   Install the shift arm “1” with its slot “a” aligned with the mark “b” in end of the shift shaft.

---

NOTE: __________________________
To collect any remaining clutch fluid, place a container under the master cylinder and the end of the clutch hose.

---

EAS25280
DISASSEMBLING THE CLUTCH MASTER CYLINDER

NOTE: __________________________
Before disassembling the clutch master cylinder, drain the clutch fluid from the entire clutch system.

1. Remove:
   • Clutch hose union bolt “1”
   • Copper washers “2”
   • Clutch hose “3”

---

EAS25300
ASSEMBLING THE CLUTCH MASTER CYLINDER

WARNING
• Before installation, all internal clutch components must be cleaned and lubricated with clean or new clutch fluid.
• Never use solvents on internal clutch components.

---

Recommended clutch fluid
Brake fluid DOT 4
INSTALLING THE CLUTCH MASTER CYLINDER

1. Install:
   • Clutch master cylinder “1”
   • Clutch master cylinder holder “2”

   **Clutch master cylinder holder bolt**
   10 Nm (1.0 m·kg, 7.2 ft·lb)

   **NOTE:**
   • Align the end of the clutch lever holder with the punch mark “a” on the handlebar.
   • First, tighten the rear bolt, then the front bolt.

2. Install:
   • Copper washers [New]
   • Clutch hose “1”
   • Clutch hose union bolt “2”

   **Clutch hose union bolt**
   30 Nm (3.0 m·kg, 22 ft·lb)

   **CAUTION:**
   Clutch fluid may damage painted surfaces or plastic parts. Therefore, always clean up any split clutch fluid immediately.

   **NOTE:**
   In order to ensure a correct reading of the clutch fluid level, make sure the top of the reservoir is horizontal.

3. Fill:
   • Clutch master cylinder reservoir (with the specified amount of the recommended clutch fluid)

   **Recommended clutch fluid**
   Brake fluid DOT 4

   **WARNING**
   Use only the designated clutch fluid. Other clutch fluids may cause the rubber seals to deteriorate, causing leakage and poor clutch performance.
   • Refill with the same type of clutch fluid that is already in the system. Mixing clutch fluids may result in a harmful chemical reaction, leading to poor clutch performance.
   • When refilling, be careful that water does not enter the clutch fluid reservoir. Water will significantly lower the boiling point of the clutch fluid and could cause vapor lock.

4. Bleed:
   • Clutch system
   Refer to “BLEEDING THE HYDRAULIC CLUTCH SYSTEM” on page 3-15.

5. Check:
   • Clutch fluid level
   Below the minimum level mark “a” → Add the recommended clutch fluid to the proper level. Refer to “CHECKING THE CLUTCH FLUID LEVEL” on page 3-14.
6. Check:
   • Clutch lever operation
     Soft or spongy feeling → Bleed the clutch system.
     Refer to “BLEEDING THE HYDRAULIC CLUTCH SYSTEM” on page 3-15.

REMOVING THE CLUTCH RELEASE CYLINDER
1. Remove:
   • Clutch pipe union bolt “1”
   • Copper washers “2”
   • Clutch pipe “3”

NOTE: _______________________________________________________________________
Put the end of the clutch pipe into a container and pump out the clutch fluid carefully.

CHECKING THE CLUTCH RELEASE CYLINDER

<table>
<thead>
<tr>
<th>Recommended clutch component replacement schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Piston seal</td>
</tr>
<tr>
<td>Clutch hose</td>
</tr>
<tr>
<td>Clutch fluid</td>
</tr>
</tbody>
</table>

1. Install:
   • Clutch release cylinder body
     Cracks/damage → Replace the clutch release cylinder.

2. Check:
   • Clutch release cylinder “1”
   • Clutch release cylinder piston “2”
     Rust/scratches/wear → Replace the clutch release cylinder and clutch release cylinder piston as a set.

WARNING
EW1D71006
Before installation, all internal clutch components must be cleaned and lubricated with clean or new clutch fluid.
• Never use solvents on internal clutch components as they will cause the piston seal to swell and distort.
• Whenever a clutch release cylinder is disassembled, replace the piston seal.

Recommended clutch fluid
Brake fluid DOT 4

INSTALLING THE CLUTCH RELEASE CYLINDER
1. Install:
   • Copper washers New
   • Clutch pipe “1”
   • Clutch pipe union bolt “2”

   | Clutch pipe union bolt |
   | 26 Nm (2.6 m·kg, 19 ft·lb) |

WARNING
Proper clutch pipe routing is essential to ensure safe vehicle operation. Refer to “CABLE ROUTING” on page 2-45.
When installing the clutch pipe onto the clutch release cylinder, make sure the pipe "a" touches the projection "b" on the clutch release cylinder.

2. Fill:
   • Clutch master cylinder reservoir
     (with the specified amount of the recommended clutch fluid)

   ! WARNING
   • Use only the designated clutch fluid. Other clutch fluids may cause the rubber seals to deteriorate, causing leakage and poor clutch performance.
   • Refill with the same type of clutch fluid that is already in the system. Mixing clutch fluids may result in a harmful chemical reaction, leading to poor clutch performance.
   • When refilling, be careful that water does not enter the clutch fluid reservoir. Water will significantly lower the boiling point of the clutch fluid and could cause vapor lock.

   ! CAUTION:
   Clutch fluid may damage painted surfaces or plastic parts. Therefore, always clean up any spilt clutch fluid immediately.

   NOTE:
   In order to ensure a correct reading of the clutch fluid level, make sure that the top of the reservoir is horizontal.

3. Bleed:
   • Clutch system
     Refer to “BLEEDING THE HYDRAULIC CLUTCH SYSTEM” on page 3-15.

4. Check:
   • Clutch fluid level
     Below the minimum level mark "a" → Add the recommended clutch fluid to the proper level. Refer to “CHECKING THE CLUTCH FLUID LEVEL” on page 3-14.

5. Check:
   • Clutch lever operation
     Soft or spongy feeling → Bleed the clutch system. Refer to “BLEEDING THE HYDRAULIC CLUTCH SYSTEM” on page 3-15.

- **E**

**Torque values:**

- **22 Nm (2.2 m·kg, 16 ft·lb)**
- **10 Nm (1.0 m·kg, 7.2 ft·lb)**
CHECKING THE SHIFT SHAFT
1. Check:
   • Shift shaft
     Bends/damage/wear → Replace.
   • Shift shaft spring
     Damage/wear → Replace.

CHECKING THE STOPPER LEVER
1. Check:
   • Stopper lever
     Bends/damage → Replace.
     Roller turns roughly → Replace the stopper lever.
   • Stopper lever spring
     Damage/wear → Replace.

INSTALLING THE SHIFT SHAFT
1. Install:
   • Stopper lever “1”
   • Collar
   • Stopper lever bolt “2”
   • Stopper lever spring “3”

   **NOTE:**
   • Hook the ends of the stopper lever spring onto the stopper lever and the crankcase boss “4”.
   • Mesh the stopper lever with the shift drum segment assembly.

2. Install:
   • Washers
   • Circlips
   • Shift shaft spring “1”
   • Shift shaft “2”

   **NOTE:**
   Hook the end of the shift shaft spring onto the shift shaft spring stopper “3”.

   **Stopper lever bolt**

GENERATOR AND STARTER CLUTCH

REMOVING THE GENERATOR
1. Remove:
   • Generator rotor bolt “1”
   • Washer

NOTE:
While holding the generator rotor “2” with the sheave holder “3”, loosen the generator rotor bolt.

2. Remove:
   • Generator rotor “1”
     (with the rotor puller “2”)
   • Woodruff key

CHECKING THE STARTER CLUTCH
1. Check:
   • Starter clutch rollers
     Damage/wear → Replace.

2. Check:
   • Starter clutch idle gear
   • Starter clutch gear
     Burrs/chips/roughness/wear → Replace the defective part(s).

3. Check:
   • Starter clutch gear’s contacting surfaces
     Damage/pitting/wear → Replace the starter clutch gear.

4. Check:
   • Starter clutch operation

\--------------------

EAS24570

sheave holder
90890-01701
Primary clutch holder
YS-01880-A

a. Install the starter clutch gear “1” onto the starter clutch and hold the generator rotor “2”.

b. When turning the starter clutch gear clockwise “A”, the starter clutch and the starter clutch gear should engage, otherwise the starter clutch is faulty and must be replaced.

c. When turning the starter clutch gear counterclockwise “B”, it should turn freely, otherwise the starter clutch is faulty and must be replaced.

REMOVING THE STARTER CLUTCH
1. Remove:
   • Starter clutch bolts
   • Starter clutch
CHECKING THE TORQUE LIMITER
1. Check:
   • Torque limiter
     Damage/wear → Replace.

NOTE:
Do not disassemble the torque limiter.

INSTALLING THE STARTER CLUTCH
1. Install:
   • Starter clutch

   Starter clutch bolt
   24 Nm (2.4 m·kg, 17 ft·lb)
   LOCTITE®

NOTE:
While holding the generator rotor “1” with the sheave holder “2”, tighten the starter clutch bolts.

   Sheave holder
   90890-01701
   Primary clutch holder
   YS-01880-A

2. Tighten:
   • Generator rotor bolt “1”

   Generator rotor bolt
   80 Nm (8.0 m·kg, 58 ft·lb)

NOTE:
While holding the generator rotor “2” with a sheave holder “3”, tighten the generator rotor bolt.

   Sheave holder
   90890-01701
   Primary clutch holder
   YS-01880-A

3. Apply:
   • Sealant
     (onto the stator coil lead grommet)

INSTALLING THE GENERATOR
1. Install:
   • Woodruff key

   • Generator rotor “1”
   • Washer
   • Generator rotor bolt “2”

NOTE:
• Clean the tapered portion of the generator shaft and the generator rotor hub.
• When installing the rotor, make sure the woodruff key is properly seated in the key way of the generator shaft.
• Lubricate the generator rotor bolt threads and washer mating surfaces with engine oil.

For assembly, reverse the disassembly procedure.
CHECKING THE STARTER MOTOR

1. Check:
   • Commutator
     Dirt → Clean with 600 grit sandpaper.

2. Measure:
   • Commutator diameter “a”
     Out of specification → Replace the starter motor.

3. Measure:
   • Mica undercut “a”
     Out of specification → Scrape the mica to the proper measurement with a hacksaw blade that has been grounded to fit the commutator.

NOTE:
The mica of the commutator must be undercut to ensure proper operation of the commutator.

4. Measure:
   • Armature assembly resistances (commutator and insulation)
     Out of specification → Replace the starter motor.

5. Measure:
   • Brush length “a”
     Out of specification → Replace the brushes as a set.

6. Measure:
   • Brush spring force
     Out of specification → Replace the brush springs as a set.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

Armature coil
Commulator resistance “1”
0.0081–0.0099 Ω at 20 °C (68 °F)
Insulation resistance “2”
Above 1 MΩ at 20 °C (68 °F)

Brush spring force
7.36–11.04 N (26.49–39.74 oz)
(750–1126 gf)
7. Check:
• Gear teeth
  Damage/wear → Replace the gear.

8. Check:
• Bearings
• Oil seal
  Damage/wear → Replace the defective part(s).

ASSEMBLING THE STARTER MOTOR
1. Install:
• Starter motor yoke “1”

NOTE:  
Align the projection “a” on the brush holder with the slot “b” in the starter motor yoke.

2. Install:
• Starter motor front cover “1”

NOTE:  
Align the match mark “a” on the starter motor yoke with the match mark “b” on the starter motor front cover.
Removing the middle driven shaft

REMOVING THE MIDDLE DRIVEN SHAFT

**NOTE:**
Loosen the middle drive gear nut before remove the drive pulley.

1. Install:
   - Right rider footrest assembly
     Refer to “ENGINE REMOVAL” on page 5-1.
2. Loosen:
   - Middle drive gear nut “1”
**NOTE:**
When loosening the middle drive gear nut, press down on the brake pedal so the middle drive gear does not move.

3. Remove:
   - Primary chain “1”
   - Middle drive gear “2”
   - Middle driven shaft “3”
**NOTE:**
Remove the primary chain, middle drive gear and middle driven shaft at the same time.

CHECKING THE MIDDLE DRIVE

1. Check:
   - Middle drive gear
   - Middle driven gear
   Damage/wear → Replace the middle drive gear, middle driven shaft and primary chain as a set.

2. Check:
   - Primary chain
     Damage/stiffness → Replace the primary chain, middle drive gear and middle driven shaft as a set.

CHECKING THE OIL STRAINER

1. Check:
   - Oil strainer
     Damage → Replace.
     Contaminants → Clean with engine oil.

CHECKING THE TRANSFER GEAR OIL PUMP

1. Check:
   - Transfer gear oil pump housing
   - Transfer gear oil pump cover
     Cracks/damage/wear → Replace the defective part(s).
2. Measure:
   - Inner-rotor-to-outer-rotor-tip clearance “a”
   - Outer-rotor-to-oil-pump-housing clearance “b”
   - Oil-pump-housing-to-inner-rotor-and-outer-rotor clearance “c”
   Out of specification → Replace the transfer gear oil pump.
3. Check:
   • Transfer gear oil pump operation
     Rough movement → Repeat steps (1) and (2) or replace the defective part(s).

   Inner-rotor-to-outer-rotor-tip clearance
   Less than 0.12 mm (0.0047 in)
   Limit
   0.20 mm (0.0079 in)

Outer-rotor-to-oil-pump-housing clearance
0.10–0.15 mm (0.0039–0.0059 in)
Limit
0.22 mm (0.0087 in)

Oil-pump-housing-to-inner-and-outer-rotor clearance
0.04–0.09 mm (0.0016–0.0035 in)
Limit
0.160 mm (0.0063 in)

3. Check:
   • Transfer gear oil pump operation
     Refer to “CHECKING THE TRANSFER GEAR OIL PUMP” on page 5-86.

   NOTE:
   When installing the inner rotor, align the pin in the oil pump shaft with the groove in the inner rotor.

   Oil pump housing screw
   4 Nm (0.4 m·kg, 2.9 ft·lb)

3. Check:
   • Transfer gear oil pump operation

   ASSEMBLING THE TRANSFER GEAR OIL PUMP
   1. Lubricate:
      • Transfer gear oil pump inner rotor
      • Transfer gear oil pump outer rotor
      • Transfer gear oil pump shaft
        (with the recommended lubricant)

      Recommended lubricant
      Engine oil

2. Install:
   • Transfer gear oil pump shaft “1”
     (to the transfer gear oil pump housing “2”)  
   • Washer “3”
   • Pin “4”
   • Transfer gear oil pump inner rotor “5”

   • Transfer gear oil pump outer rotor “6”
   • Transfer gear oil pump cover “7”

   NOTE:

   INSTALLING THE TRANSFER GEAR CASE
   1. Install:
      • Spacer “1”

   NOTE:

   Install the spacer with its groove “a” towards the drive pulley.

   2. Install:
      • Middle driven shaft “1”
      • Middle drive gear “2”
      • Primary chain “3”
        (into the transfer gear case)
      • Drive pulley nut

   NOTE:

   • Install the primary chain with its blue link “a” facing outward.

EAS25510
CHECKING THE OIL PIPES
1. Check:
   • Oil pipes
     Damage → Replace.

EAS25520
ASSEMBLING THE TRANSFER GEAR OIL PUMP
1. Lubricate:
   • Transfer gear oil pump inner rotor
   • Transfer gear oil pump outer rotor
   • Transfer gear oil pump shaft
     (with the recommended lubricant)
• Install the middle drive gear “2” with its chamfered side facing “b” the transfer gear case.
• Install the middle driven shaft, middle drive gear and primary chain at the same time.
• Align the splines on the middle drive gear with the splines on the drive axle.
• Temporarily install the drive pulley nut onto the middle driven shaft.

3. Install:
• Conical spring washer “1”
• Middle drive gear nut “2” [New]

**NOTE:**
• Lubricate the middle drive gear nut threads and conical spring washer mating surfaces with engine oil.
• Install the conical spring washer “1” with the “OUT” mark “a” facing out.
• Stake the middle drive gear nut “2” at a cutout “b” in the drive axle.

4. Remove:
• Drive pulley nut
Separating the crankcase

1 | Oil baffle plate (right crankcase) | 1 |
2 | Bearing retainer | 2 |
3 | Bearing retainer | 2 |
4 | Oil seal | 2 |
5 | Bearing | 4 |

For installation, reverse the removal procedure.
DISASSEMBLING THE CRANKCASE

1. Remove:
   • Crankcase bolts

   **NOTE:**
   - Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern. After all of the bolts are fully loosened, remove them.
   - Loosen the bolts in decreasing numerical order (refer to the numbers in the illustration).

   - M8 × 90 mm bolts: “1”, “2”
   - M8 × 65 mm bolt: “3”
   - M6 × 100 mm bolts: “4”, “9”–“11”
   - M6 × 80 mm bolt: “12”
   - M6 × 70 mm bolts: “13”–“16”
   - M6 × 60 mm bolts: “5”–“8”
   - M6 × 35 mm bolts: “17”–“24”

2. Remove:
   • Left crankcase

   **CAUTION:**
   Tap on one side of the crankcase with a soft-face hammer. Tap only on reinforced portions of the crankcase, not on the crankcase mating surfaces. Work slowly and carefully and make sure the crankcase halves separate evenly.

CHECKING THE CRANKCASE

1. Thoroughly wash the crankcase halves in a mild solvent.
2. Thoroughly clean all the gasket surfaces and crankcase mating surfaces.
3. Check:
   • Crankcase
     Cracks/damage → Replace.
   • Oil delivery passages
     Obstruction → Blow out with compressed air.

CHECKING THE BEARINGS AND OIL SEAL

1. Check:
   • Bearings
     Clean and lubricate the bearings, then rotate the inner race with your finger.
     Rough movement → Replace.
   • Oil seals
     Damage/wear → Replace.

CHECKING THE OIL DELIVERY PIPE AND OIL PIPE

1. Check:
   • Oil delivery pipe
   • Oil pipes
     Damage → Replace.
     Obstruction → Wash and blow out with compressed air.

CHECKING THE OIL STRAINERS

1. Check:
   • Oil strainers
     Damage → Replace.
     Contaminants → Clean with solvent.
CHECKING THE ENGINE OIL PUMP DRIVEN GEAR
1. Check:
   • Engine oil pump driven gear
     Chips/pitting/roughness/wear → Replace.

INSTALLING THE BEARING RETAINERS
1. Install:
   • Bearing retainers “1”

NOTE:
• Apply locking agent (LOCTITE®) to the threads of the bearing retainer bolts.
• Stake the bearing retainer bolts “2”.

ASSEMBLING THE CRANKCASE
1. Apply:
   • Sealant
     (onto the crankcase mating surfaces)

Yamaha bond No. 1215
90890-85505
(Three Bond No.1215®)

NOTE:
Do not allow any sealant to come into contact with the oil gallery.

2. Install:
   • Oil pipe (“F” mark) “1”
   • Oil pipe (“R” mark) “2”
   • Dowel pins “3”

3. Install:
   • Left crankcase
     (onto the right crankcase)

   NOTE:
   Tap lightly on the left crankcase with a soft-face hammer.

4. Install:
   • Crankcase bolts (M6)
   • Crankcase bolts (M8)

   Crankcase bolt (M6)
   10 Nm (1.0 m·kg, 7.2 ft·lb)
   Crankcase bolt (M8)
   24 Nm (2.4 m·kg, 17 ft·lb)

NOTE:
• Lubricate the bolt threads with engine oil.
• Tighten each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern.
• Tighten the bolts in numerical order (refer to the numbers in the illustration).

   • M8 × 90 mm bolts: “1”, “2”
   • M8 × 65 mm bolt: “3”
   • M6 × 100 mm bolts: “4”, “9”–“11”
   • M6 × 80 mm bolt: “12”
   • M6 × 70 mm bolts: “13”–“16”
   • M6 × 60 mm bolts: “5”–“8”
   • M6 × 35 mm bolts: “17”–“24”
5. Apply:
- Engine oil
  (onto the crankshaft pin bearings and oil delivery holes)

6. Check:
- Crankshaft and transmission operation
  Rough movement → Repair.
Removing the oil pump

CHECKING THE OIL PUMP

1. Check:
   - Oil pump housing
   - Oil pump housing cover
     Cracks/damage/wear → Replace the defective part(s).

2. Measure:
   - Inner-rotor-to-outer-rotor-tip clearance “a”
   - Outer-rotor-to-oil-pump-housing clearance “b”
   - Oil-pump-housing-to-inner-rotor-and-outer-rotor clearance “c”
     Out of specification → Replace the oil pump.

3. Check:
   - Oil pump operation
     Rough movement → Repeat steps (1) and (2) or replace the defective part(s).

CHECKING THE RELIEF VALVE

1. Check:
   - Relief valve body
   - Relief valve
   - Relief valve spring
     Damage/wear → Replace the defective part(s).

CHECKING THE BALL SPRING AND RELIEF VALVE SPRING

1. Measure:
   - Ball spring free length
   - Relief valve spring free length
     Out of specification → Replace the defective part(s).

---

Inner-rotor-to-outer-rotor-tip clearance
Less than 0.12 mm (0.0047 in)
Limit 0.20 mm (0.0079 in)

Oil-pump-housing-to-inner-and-outer-rotor clearance
0.06–0.13 mm (0.0024–0.0051 in)
Limit 0.20 mm (0.0079 in)

Outer-rotor-to-oil-pump-housing clearance
0.09–0.19 mm (0.0035–0.0075 in)
Limit 0.26 mm (0.0102 in)

Ball spring free length
34.70 mm (1.37 in)
Limit 32.97 mm (1.30 in)

Relief valve spring free length
28.95 mm (1.14 in)
Limit 27.50 mm (1.08 in)
2. Measure:
• Ball spring force
• Relief valve spring force
  Out of specification → Replace the defective part(s).

<table>

EAS24990
CHECKING THE OIL STRAINER
1. Check:
• Oil strainer “1”
  Damage → Replace.
  Contaminants → Clean with solvent.

EAS24600
ASSEMBLING THE OIL PUMP
1. Lubricate:
• Inner rotor
• Outer rotor

• Oil pump shaft
  (with the recommended lubricant)

<table>
<thead>
<tr>
<th>Recommended lubricant</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine oil</td>
</tr>
</tbody>
</table>

2. Install:
• Oil pump housing 2 “1”
• Ball guide “2”
• Ball “3”
• Oil seal “4” New
• Circlip “5” New
• Oil seal “6” New
• Oil pump shaft “7”
• Pin “8”
• Oil feed pump inner rotor “9”
• Oil feed pump outer rotor “10”
• Relief valve “11”
• Relief valve spring “12”
• Oil pump housing cover 2 “13”

<table>
<thead>
<tr>
<th>Oil pump housing cover 1 screw</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 Nm (0.7 m·kg, 5.1 ft·lb)</td>
</tr>
</tbody>
</table>

NOTE:
When installing the inner rotor, align the pin in the oil pump shaft with the groove in the inner rotor.
3. Check:
   • Oil pump operation
     Refer to “CHECKING THE OIL PUMP” on page 5-98.

**CAUTION:**

After tightening the bolts, make sure the oil pump turns smoothly.
Removing the crankshaft

</tr>
</tbody>
</table>

1st 15 Nm (1.5 m·kg, 11 ft·lb)  
2nd Specified angle 125–135°

For installation, reverse the removal procedure.
REMOVING THE CONNECTING RODS

1. Remove:
   • Connecting rod caps “1”
   • Connecting rods
   • Big end bearings

NOTE:
Identify the position of each big end bearing so that it can be reinstalled in its original place.

CHECKING THE CRANKSHAFT AND CONNECTING RODS

1. Measure:
   • Crankshaft runout
     Out of specification → Replace the crankshaft.

   Runout limit C
   0.040 mm (0.0016 in)

2. Check:
   • Crankshaft journal surfaces
   • Crankshaft pin surfaces
   • Bearing surfaces
     Scratches/wear → Replace the crankshaft.
   • Generator shaft drive gear “1”
     Damage/wear → Replace the crankshaft.

3. Measure:
   • Crankshaft-pin-to-big-end-bearing clearance
     Out of specification → Replace the big end bearings.

   Journal oil clearance (using plastigauge®)
   0.030–0.060 mm (0.0012–0.0024 in)

The following procedure applies to all of the connecting rods.

CAUTION:
Do not interchange the big end bearings and connecting rods. To obtain the correct crankshaft-pin-to-big-end-bearing clearance and prevent engine damage, the big end bearings must be installed in their original positions.

a. Clean the big end bearings, crankshaft pins, and the inside of the connecting rod halves.
b. Install the big end upper bearing into the connecting rod and the big end lower bearing into the connecting rod cap.

NOTE:
Align the projections “a” on the big end bearings with the notches “b” in the connecting rod and connecting rod cap.

c. Put a piece of Plastigauge® “1” on the crankshaft pin.
d. Assemble the connecting rod halves.

**NOTE:**

- Do not move the connecting rod or crankshaft until the clearance measurement has been completed.
- Lubricate the bolts threads with molybdenum disulfide grease.
- Make sure the projection “c” on the connecting rod faces towards the left side of the crankshaft.
- Make sure the characters “d” on both the connecting rod and connecting rod cap are aligned.

h. Tighten the connecting rod bolts further to reach the specified angle 125–135°.

![Connecting rod bolt (final) Specified angle 125–135°](image)

**WARNING**

When a bolt is tightened more than the specified angle, do not loosen and then retighten it. Replace the bolt with a new one and perform the procedure again.

**CAUTION:**

- Do not use a torque wrench to tighten the bolt to the specified angle.
- Tighten the bolt until it is at the specified angle.

i. Remove the connecting rod and big end bearings.

j. Measure the compressed Plastigauge® width “e” on the crankshaft pin. If the crankshaft-pin-to-big-end-bearing clearance is out of specification, select replacement big end bearings.

g. Put a mark “1” on the connecting rod bolts “2” and the connecting rod cap “3”.

![Connecting rod bolt (1st) 15 Nm (1.5 m·kg, 11 ft·lb)](image)
4. Select:
• Big end bearings ("P₁"–"P₂")

**NOTE:**
• The numbers “a” stamped into the crankshaft web and the numbers “b” on the connecting rods are used to determine the replacement big end bearing sizes.
• "P₁"–"P₂" refer to the bearings shown in the crankshaft illustration.

For example, if the connecting rod “P₁” and the crankshaft web “P” numbers are “5” and “2” respectively, then the bearing size for “P₁” is:

\[
"P₁" (connecting rod) - "P" (crankshaft) = 5 - 2 = 3 \text{ (brown)}
\]

### Bearing color code

5. Measure:
• Crankshaft journal diameter “a”
  Out of specification → Replace the crankshaft.

**NOTE:**
Measure the diameter of each crankshaft journal at two places.

### Crankshaft journal diameter
49.968–49.980 mm (1.9672–1.9677 in)

6. Measure:
• Crankshaft journal bearing inside diameter “a”
  Out of specification → Replace the crankcase assembly.

**NOTE:**
Measure the inside diameter of each crankshaft journal bearing at two places.

### Crankshaft journal bearing inside diameter
50.010–50.030 mm (1.9689–1.9697 in)
7. Calculate:
• Crankshaft journal-to-crankshaft journal bearing clearance
  Out of specification → Replace the crankshaft and crankshaft journal bearings as a set.

**NOTE:**
Calculate the clearance by subtracting the crankshaft journal diameter from the crankshaft journal bearing inside diameter.

---

**Crankshaft journal-to-crankshaft journal bearing clearance**
0.030–0.060 mm (0.0012–0.0024 in)

---

**INSTALLING THE CONNECTING RODS**

1. Lubricate:
• Bolt threads
  (with the recommended lubricant)

**Recommended lubricant**
Molybdenum disulfide grease

2. Lubricate:
• Crankshaft pins
• Big end bearings
• Connecting rod inner surface
  (with the recommended lubricant)

**Recommended lubricant**
Engine oil

3. Install:
• Big end bearings
• Connecting rods
• Connecting rod caps
  (onto the crankshaft pins)

**NOTE:**
• Align the projections “a” on the big end bearings with the notches “b” in the connecting rods and connecting rod caps.

---

**4. Tighten:**
• Connecting rod bolts “1”

---

**WARNING**

• Replace the connecting rod bolts with new ones.
• Clean the connecting rod bolts.

**NOTE:**
The tightening procedure of the connecting rod bolts is angle controlled, therefore tighten the bolts using the following procedure.
a. Tighten the connecting rod bolts with a torque wrench.

<table>
<thead>
<tr>
<th>Connecting rod bolt (1st)</th>
<th>15 Nm (1.5 m·kg, 11 ft·lb)</th>
</tr>
</thead>
</table>

b. Put a mark “1” on the corner of the connecting rod bolts “2” and the connecting rod “3”.

c. Tighten the connecting rod bolts further to reach the specified angle 125–135°.

<table>
<thead>
<tr>
<th>Connecting rod bolt (final)</th>
<th>Specified angle 125–135°</th>
</tr>
</thead>
</table>

---

**WARNING**

When a bolt is tightened more than the specified angle, do not loosen and then retighten it. Replace the bolt with a new one and perform the procedure again.

**CAUTION:**

- Do not use a torque wrench to tighten the bolt to the specified angle.
- Tighten the bolt until it is at the specified angle.

---

**CAUTION:**

- Crankshaft assembly “2”

To avoid scratching the crankshaft and to ease the installation procedure, lubricate the oil seal lips with lithium-soap-based grease and each bearing with engine oil.

**NOTE:**

- Make sure that the generator shaft drive gear teeth and generator shaft driven gear teeth mesh correctly.
- Align the punch mark “a” on the generator shaft driven gear with the punch mark “b” on the generator shaft drive gear.
- Align the right connecting rod with the front cylinder sleeve hole.

---

**INSTALLING THE CRANKSHAFT ASSEMBLY**

1. Install:

   - Generator shaft “1”

For assembly, reverse the disassembly procedure.
CHECKING THE SHIFT FORKS

The following procedure applies to all of the shift forks.

1. Check:
   • Shift fork cam follower “1”
   • Shift fork pawl “2”
     Bends/damage/scoring/wear → Replace the shift fork.

2. Check:
   • Shift fork guide bar
     Roll the shift fork guide bar on a flat surface.
     Bends → Replace.

**WARNING**

Do not attempt to straighten a bent shift fork guide bar.

3. Check:
   • Shift fork movement
     (along the shift fork guide bar)
     Rough movement → Replace the shift forks
     and shift fork guide bar as a set.

CHECKING THE SHIFT DRUM ASSEMBLY

1. Check:
   • Shift drum groove
     Damage/scratches/wear → Replace the shift drum assembly.
   • Shift drum segment “1”
     Damage/wear → Replace the shift drum assembly.
   • Shift drum bearing “2”
     Damage/pitting → Replace the shift drum assembly.

CHECKING THE TRANSMISSION

1. Measure:
   • Main axle runout
     (with a centering device and dial gauge “1”)
     Out of specification → Replace the main axle.

   **Main axle runout limit**
   0.08 mm (0.0032 in)

2. Measure:
   • Drive axle runout
     (with a centering device and dial gauge “1”)
     Out of specification → Replace the drive axle.

   **Drive axle runout limit**
   0.08 mm (0.0032 in)
3. Check:
• Transmission gears
  Blue discoloration/pitting/wear → Replace the defective gear(s).
• Transmission gear dogs
  Cracks/damage/rounded edges → Replace the defective gear(s).

4. Check:
• Transmission gear engagement
  (each pinion gear to its respective wheel gear)
  Incorrect → Reassemble the transmission axle assemblies.

5. Check:
• Transmission gear movement
  Rough movement → Replace the defective part(s).

6. Check:
• Circlips
  Bends/damage/looseness → Replace.

NOTE:
• Be sure the circlip sharp-edged corner “a” is positioned opposite side to the toothed washer and gear. (For main axle)

Install the circlip so that both ends “b” rest on the sides of a spline “c” with both axles aligned.

2. Install:
• Toothed lock washer retainer “1”
• Toothed lock washer “2”

NOTE:
• With the toothed lock washer retainer “1” in the groove “a” in the axle, align the projection “c” on the retainer with an axle spline “b”, and then install the toothed lock washer “2”.
• Be sure to align the projection on the toothed lock washer that is between the alignment marks “e” with the alignment mark “d” on the retainer.

ASSEMBLING THE MAIN AXLE AND DRIVE AXLE
1. Install:
• Toothed washer “1”
• Circlip “2” New

NOTE:
• Be sure the circlip sharp-edged corner “a” is positioned opposite side to the toothed washer and gear. (For main axle)

INSTALLING THE SHIFT FORKS AND SHIFT DRUM ASSEMBLY
1. Install:
• Shift forks 1 “1”
• Shift fork 2 “2”
• Shift drum assembly “3”
• Shift fork guide bars “4”

**NOTE:**

The embossed marks “1D7” on the shift forks should face towards the left side of the engine.

---

2. Check:
   • Transmission
     Rough movement → Repair.

**NOTE:**

• Apply engine oil to each gear and bearing thoroughly.
• Before assembling the crankcase, make sure that the transmission is in neutral and that the gears turn freely.

For installation, reverse the removal procedure.
REMOVING THE FUEL TANK
1. Extract the fuel in the fuel tank through the fuel tank cap with a pump.
2. Remove:
   • Fuel tank

CAUTION:
Although the fuel has been removed from the fuel tank, be careful when removing the fuel hoses, since there may be fuel remaining in them.

a. Remove the fuel hose joint caps “1”.

NOTE:
After removing the fuel hose joint caps, clean the projection on each cap so that no foreign material will enter the fuel lines.

b. Lubricate the O-ring “1” with the recommended silicone lubricant “2”.

Recommended lubricant
Silicone protectant and lubricant
ACC-SLCNS-PR-AY

NOTE:
Spray the silicone lubricant in the areas shown in the illustration.

c. Turn the screws “1” clockwise.

NOTE:
Turn the screws until they stop.

d. Disconnect the fuel hose (fuel hose joint to fuel pump) “1” and air vent hose (fuel pump to fuel hose joint) “2”.

NOTE:
Before removing the hoses, place a few rags in the area under where they will be removed.

e. Install the fuel hose joint cap “1” and rubber plug “2”.

NOTE:
Insert the projection on the fuel hose joint cap completely into the pipe of the fuel hose joint and insert the rubber plug into the end of the fuel hose (fuel hose joint to fuel pump).

f. Remove the fuel tank.

REMOVING THE FUEL PUMP
1. Remove:
   • Fuel hose connector cover
2. Disconnect:
   • Fuel outlet hose
CAUTION:
- Be sure to disconnect the fuel outlet hose by hand. Do not forcefully disconnect the hose with tools.
- Although the fuel has been removed from the fuel tank be careful when removing the fuel hoses, since there may be fuel remaining in them.

NOTE:
- Remove the fuel hose manually without using any tools.
- Before removing the hoses, place a few rags in the area under where they will be removed.

3. Remove:
   • Fuel pump

CAUTION:
- Do not drop the fuel pump or give it a strong shock.
- Do not touch the base section of the fuel sender.

CHECKING THE FUEL PUMP BODY
1. Check:
   • Fuel pump body
     Obstruction → Clean.
     Cracks/damage → Replace fuel pump assembly.

2. Check:
   • Diaphragms and gaskets
     Tears/fatigue/cracks → Replace fuel pump assembly.

CHECKING THE FUEL PUMP OPERATION
1. Check:
   • Fuel pump operation
     Refer to “CHECKING THE FUEL PUMP” on page 7-89.

INSTALLING THE FUEL PUMP
1. Install:
   • Fuel pump

<table>
<thead>
<tr>
<th>Fuel pump bolt</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 Nm (0.5 m·kg, 3.6 ft·lb)</td>
</tr>
</tbody>
</table>

NOTE:
- Do not damage the installation surfaces of the sub-fuel tank when installing the fuel pump.
- Always use a new fuel pump gasket.

2. Connect:
   • Fuel outlet hose

3. Install:
   • Fuel hose connector cover “1”

   CAUTION:
   When installing the fuel outlet hose, make sure that it is securely connected, and that the fuel hose connector cover is installed correctly, otherwise the fuel outlet hose will not be properly installed.

NOTE:
- Install the fuel outlet hose connector securely onto the sub fuel tank until a distinct “click” is heard, and then make sure that it does not come loose.
- Install the holder “a” of the fuel hose connector cover, and then install the holder “b”. After installing the fuel hose connector cover, make sure that it is installed securely.

INSTALLING THE FUEL TANK
1. Install:
   • Fuel tank
a. Install the fuel tank.

b. Remove the fuel hose joint caps.

c. Connect the fuel hose (fuel hose joint to fuel pump) and air vent hose (fuel pump to fuel hose joint).

d. Turn the screws “1” counterclockwise.

**NOTE:**

Turn the screws until they contact the clips “a”.

e. Install the fuel hose joint caps.

**NOTE:**

Install the fuel hose joint caps completely onto the fuel hose joints.

2. Install:
   - Meter assembly couplers
   - Fuel sender coupler

**NOTE:**

Make sure that the couplers are positioned as shown in the illustration in the following order from left to right: fuel sender coupler “1”, 6-pin black meter assembly coupler “2”, 4-pin white meter assembly coupler “3”, and 6-pin white meter assembly coupler “4”.

For assembly, reverse the disassembly procedure.

- 30 Nm (3.0 m·kg, 22 ft·lb)
- 5 Nm (0.5 m·kg, 3.6 ft·lb)
REMOVING THE FUEL HOSE
1. Disconnect:
   • Fuel hose (intake manifold assembly to pressure regulator)

CAUTION: Although the fuel has been removed from the fuel tank be careful when removing the fuel hose, since there may be fuel remaining in it.

NOTE:
• To remove the fuel hose from the fuel pipe or pressure regulator, slide the fuel hose connector cover “1” on the end of the hose in the direction of the arrow shown, press the two buttons “2” on the sides of the connector, and then remove the hose.
• Remove the fuel hose manually without using any tools.
• Before removing the hoses, place a few rags in the area under where they will be removed.

CHECKING THE INJECTORS
1. Check:
   • Injectors Damage → Replace.

CHECKING THE THROTTLE BODIES
1. Check:
   • Throttle bodies
     Cracks/damage → Replace the throttle bodies as a set.
2. Check:
   • Fuel passages
     Obstructions → Clean.

a. Wash the throttle bodies in a petroleum-based solvent.
   Do not use any caustic carburetor cleaning solution.

b. Blow out all of the passages with compressed air.

CHECKING THE ROLLOVER VALVES
1. Check:
   • Rollover valve 1 “1”
   • Rollover valve 2 “2”
     Damage/faulty → Replace.

NOTE:
• Check that air flows smoothly only in the direction of the arrow shown in the illustration.
• The rollover valves must be in an upright position when checking the airflow.

CHECKING THE PRESSURE REGULATOR
1. Check:
   • Pressure regulator
     Damage → Replace.

CHECKING THE PRESSURE REGULATOR OPERATION
1. Check:
   • Pressure regulator operation

a. Remove the pressure regulator cover. Refer to “THROTTLE BODIES” on page 6-6.
b. Disconnect the fuel hose “1” from the pressure regulator “2”.
c. Connect the fuel pressure adapter “3” between the fuel hose “1” and pressure regulator “2”.
d. Connect the pressure gauge “4” to the fuel pressure adapter “3”.
e. Connect the vacuum/pressure pump gauge set “5” to the pressure regulator.
**THROTTLE BODIES**

**EAS27030**

**ADJUSTING THE THROTTLE POSITION SENSOR**

1. Check:
   • Throttle position sensor
     Refer to “CHECKING THE THROTTLE POSITION SENSOR” on page 7-89.

2. Adjust:
   • Throttle position sensor angle

   a. Connect the throttle position sensor coupler to the throttle position sensor.
   b. Connect the digital circuit tester to the throttle position sensor.

   • Positive tester probe yellow terminal “1”
   • Negative tester probe black terminal “2”

**Digital circuit tester**

90890-03174
Model 88 Multimeter with tachometer
YU-A1927

c. Measure the throttle position sensor voltage.

d. Adjust the throttle position sensor angle so that the voltage is within the specified range.

**Output voltage (at idle)**

0.63–0.73 V

e. After adjusting the throttle position sensor angle, tighten the throttle position sensor screws “3”.

**INSTalling the fuel pipe**

1. Install:
   • Fuel pipe “1”

**Fuel pipe bolt**

30 Nm (3.0 m·kg, 22 ft·lb)

---

**Vacuum/pressure pump gauge set**

90890-06756
Pressure gauge
90890-03153
Fuel pressure adapter
90890-03176
YM-03176

f. Start the engine.

g. Measure the fuel pressure.

**Fuel pressure**

392 kPa (3.92 kg/cm², 55.7 psi)

h. Use the vacuum/pressure pump gauge set to adjust the fuel pressure in relation to the vacuum pressure as described below.

**NOTE:**

The vacuum pressure should not exceed 100 kPa (760 mmHg).

• Increase the vacuum pressure → Fuel pressure is decreased
• Decrease the vacuum pressure → Fuel pressure is increased

Faulty → Replace the pressure regulator.

---

**f. Start the engine.**

g. Measure the fuel pressure.

**NOTE:**

The vacuum pressure should not exceed 100 kPa (760 mmHg).

• Increase the vacuum pressure → Fuel pressure is decreased
• Decrease the vacuum pressure → Fuel pressure is increased

Faulty → Replace the pressure regulator.
NOTE:__________________________________________
Install the fuel pipe “1” so that it contacts the projections “a” on the injector joints.

INSTALLING THE FUEL HOSE
1. Connect:
   • Fuel hose (intake manifold assembly to pressure regulator)

CAUTION:_______________________________________
When installing the fuel hose, make sure that it is securely connected, and that the fuel hose connector cover on the fuel hose is in the correct position, otherwise the fuel hose will not be properly installed.

NOTE:__________________________________________
• Install the fuel hose securely onto the fuel pipe or pressure regulator until a distinct “click” is heard.
• To install the fuel hose onto the fuel pipe or pressure regulator, slide the fuel hose connector cover “1” on the end of the hose in the direction of the arrow shown.

67. Engine stop switch
77. Ignition fuse
81. ECU fuse
ENGINE STOPPING DUE TO SIDESTAND OPERATION

When the engine is running and the transmission is in gear, the engine will stop if the sidestand is moved down. This is because the electric current from the ignition coils does not flow to the ECU when both the neutral switch and sidestand switch are set to “OFF”, thereby preventing the spark plugs from producing a spark. However, the engine continues to run under the following conditions:

- The transmission is in gear (the neutral switch circuit is open) and the sidestand is up (the sidestand switch circuit is closed).
- The transmission is in neutral (the neutral switch circuit is closed) and the sidestand is down (the sidestand switch circuit is open).

    Refer to “CHECKING THE SWITCHES” on page 7-71.  
    NG →  
    Replace the neutral switch.  
    OK ↓

11. Check the sidestand switch.  
    Refer to “CHECKING THE SWITCHES” on page 7-71.  
    NG →  
    Replace the sidestand switch.  
    OK ↓

12. Check the relay unit (diode).  
    Refer to “CHECKING THE DIODES” on page 7-81.  
    NG →  
    Replace the relay unit.  
    OK ↓

13. Check the lean angle sensor.  
    Refer to “CHECKING THELEAN ANGLE SENSOR” on page 7-84.  
    NG →  
    Replace the lean angle sensor.  
    OK ↓

14. Check the entire ignition system wiring.  
    Refer to “CIRCUIT DIAGRAM” on page 7-1.  
    NG →  
    Properly connect or repair the ignition system wiring.  
    OK ↓

Replace the ECU.

ELECTRIC STARTING SYSTEM

STARTING CIRCUIT CUT-OFF SYSTEM OPERATION
If the engine stop switch is set to "O" and the main switch is turned "ON" (both switch circuits are closed), the starter motor can only operate if at least one of the following conditions is met:
• The transmission is in neutral (the neutral switch circuit is closed).
• The clutch lever is pulled to the handlebar (the clutch switch circuit is closed) and the sidestand is up (the sidestand switch circuit is closed).

The starting circuit cut-off relay prevents the starter motor from operating when neither of these conditions has been met. In this instance, the starting circuit cut-off relay stays open so current cannot reach the starter motor. When at least one of the above conditions has been met, the starting circuit cut-off relay is closed and the engine can be started by pushing the start switch "O".
a. WHEN THE TRANSMISSION IS IN NEUTRAL
b. WHEN THE SIDESTAND IS UP AND THE CLUTCH LEVER IS PULLED TO THE HANDLEBAR

TROUBLESHOOTING
The battery is not being charged.

NOTE:
• Before troubleshooting, remove the following part(s):
  1. Rider seat
  2. Rectifier/regulator cover
  3. Lead cover

1. Check the fuse.
   (Main)
   Refer to “CHECKING THE FUSES” on page 7-75.
   NG → Replace the fuse.

2. Check the battery.
   Refer to “CHECKING AND CHARGING THE BATTERY” on page 7-76.
   NG →
   • Clean the battery terminals.
   • Recharge or replace the battery.

3. Check the stator coil.
   Refer to “CHECKING THE STATOR COIL” on page 7-85.
   NG → Replace the stator coil.

4. Check the rectifier/regulator.
   Refer to “CHECKING THE RECTIFIER/REGULATOR” on page 7-85.
   NG → Replace the rectifier/regulator.

5. Check the entire charging system wiring.
   Refer to “CIRCUIT DIAGRAM” on page 7-13.
   NG →
   Properly connect or repair the charging system wiring.

The charging system circuit is OK.

## TROUBLESHOOTING

Any of the following fail to light: headlight (high beam), headlight (low beam), high beam indicator light, taillight, license light, position light, meter light or accessory light (OPTION).

### NOTE:

- Before troubleshooting, remove the following part(s):
  1. Rider seat
  2. Tool kit tray
  3. Headlight assembly

### Steps:

1. **Check the condition of each bulb and bulb socket.**
   - Refer to "CHECKING THE BULBS AND BULB SOCKETS" on page 7-74.
   - NG → Replace the bulb(s) and bulb socket(s).

2. **Check the fuses.**
   - (Main, headlight, signaling system, taillight and ECU)
   - Refer to "CHECKING THE FUSES" on page 7-75.
   - NG → Replace the fuse(s).

3. **Check the battery.**
   - Refer to "CHECKING AND CHARGING THE BATTERY" on page 7-76.
   - NG → Clean the battery terminals.
   - Recharge or replace the battery.

4. **Check the main switch.**
   - Refer to "CHECKING THE SWITCHES" on page 7-71.
   - NG → Replace the main switch.

5. **Check the dimmer switch.**
   - Refer to "CHECKING THE SWITCHES" on page 7-71.
   - NG → The dimmer switch is faulty. Replace the left handlebar switch.

6. **Check the accessory light switch.**
   - Refer to "CHECKING THE SWITCHES" on page 7-71.
   - NG → The accessory light switch is faulty. Replace the right handlebar switch.

7. **Check the headlight relay.**
   - Refer to "CHECKING THE RELAYS" on page 7-79.
   - NG → Replace the headlight relay.
| 8. Check the entire lighting system wiring. Refer to “CIRCUIT DIAGRAM” on page 7-17. | NG → | Properly connect or repair the lighting system wiring. |
| The lighting system circuit is OK. | OK ↓ |

**Checking the signaling system**

The horn fails to sound.

1. Check the horn switch. Refer to “CHECKING THE SWITCHES” on page 7-71. | NG → | The horn switch is faulty. Replace the left handlebar switch. |

OK ↓
The tail/brake light fails to come on.

1. Check the front brake light switch. Refer to “CHECKING THE SWITCHES” on page 7-71.
   - NG → Replace the front brake light switch.
   - OK ↓

2. Check the rear brake light switch. Refer to “CHECKING THE SWITCHES” on page 7-71.
   - NG → Replace the rear brake light switch.
   - OK ↓

3. Check the entire signaling system wiring. Refer to “CIRCUIT DIAGRAM” on page 7-21.
   - NG → Properly connect or repair the signaling system wiring.
   - OK ↓

This circuit is OK.

The turn signal light, turn signal indicator light or both fail to blink.

1. Check the condition of each bulb and bulb socket. Refer to “CHECKING THE BULBS AND BULB SOCKETS” on page 7-74.
   - NG → Replace the bulb(s) and bulb socket(s).
   - OK ↓

2. Check the turn signal switch. Refer to “CHECKING THE SWITCHES” on page 7-71.
   - NG → The turn signal switch is faulty. Replace the left handlebar switch.
   - OK ↓

3. Check the turn signal relay. Refer to “CHECKING THE TURN SIGNAL RELAY” on page 7-80.
   - NG → Replace the turn signal relay.
   - OK ↓

70. Reset switch
77. Ignition fuse
78. Headlight fuse
79. Signaling system fuse
81. ECU fuse
ECU SELF-DIAGNOSTIC FUNCTION

The ECU is equipped with a self-diagnostic function in order to ensure that the fuel injection system is operating normally. If this function detects a malfunction in the system, it immediately operates the engine under substitute characteristics and illuminates the engine trouble warning light to alert the rider that a malfunction has occurred in the system. Once a malfunction has been detected, a fault code is stored in the memory of the ECU.

- To inform the rider that the fuel injection system is not functioning, the engine trouble warning light flashes when the start switch is being pushed to start the engine.
- If a malfunction is detected in the system by the self-diagnostic function, the ECU provides an appropriate substitute characteristic operation, and alerts the rider of the detected malfunction by illuminating the engine trouble warning light.
- After the engine has been stopped, the lowest fault code number appears on the odometer/tripmeter/fuel reserve tripmeter/clock LCD. Once a fault code has been displayed, it remains stored in the memory of the ECU until it is deleted.

**Engine trouble warning light indication and fuel injection system operation**

<table>
<thead>
<tr>
<th>Warning light indication</th>
<th>ECU operation</th>
<th>Fuel injection operation</th>
<th>Vehicle operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flashing*</td>

<td>Operation stopped</td>
<td>Cannot be operated</td>
</tr>
<tr>
<td>Remains on</td>
<td>Malfunction detected</td>
<td>Operated with substitute characteristics in accordance with the description of the malfunction</td>
<td>Can or cannot be operated depending on the fault code</td>
</tr>
</tbody>
</table>

* The warning light flashes when any one of the conditions listed below is present and the start switch is pushed:

12: Crankshaft position sensor
19: Blue/black ECU lead (broken or disconnected)
30: Lean angle sensor (latch up detected)
41: Lean angle sensor (open or short-circuit)
50: ECU internal malfunction (memory check error)

**Checking the engine trouble warning light**

The engine trouble warning light comes on for 1.4 seconds after the main switch has been turned to “ON” and it comes on while the start switch is being pushed. If the warning light does not come on under these conditions, the warning light (LED) may be defective.

```
  a    b
    c    d    c
  a. Main switch “OFF”
b. Main switch “ON”
c. Engine trouble warning light off
d. Engine trouble warning light on for 1.4 seconds
```
SELF-DIAGNOSTIC FUNCTION TABLE

If the ECU detects an abnormal signal from a sensor while the vehicle is being driven, the ECU illuminates the engine trouble warning light and provides the engine with alternate operating instructions that are appropriate for the type of malfunction.

When an abnormal signal is received from a sensor, the ECU processes the specified values that are programmed for each sensor in order to provide the engine with alternate operating instructions that enable the engine to continue to operate or stop operating, depending on the conditions.

TROUBLESHOOTING METHOD

The engine operation is not normal and the engine trouble warning light comes on.

1. Check:
   - Fault code number
   - Check the fault code number displayed on the meter.
   - Identify the faulty system with the fault code.
   - Refer to “Self-Diagnostic Function table”.
   - Identify the probable cause of the malfunction. Refer to “Diagnostic code table”.

2. Check and repair the probable cause of malfunction.

3. Perform ECU reinstatement action.
   - Refer to “Reinstatement method” of table in “TROUBLESHOOTING DETAILS”.

4. Turn the main switch to “OFF” and back to “ON”, then check that no fault code number is displayed.

NOTE:

If fault codes are displayed, repeat steps (1) to (4) until no fault code number is displayed.

---

Fault code No. | No fault code No.
---|---
Check and repair. Refer to “TROUBLESHOOTING DETAILS” on page 7-40. Monitor the operation of the sensors and actuators in the diagnostic mode. Refer to “Sensor operation table” and “Actuator operation table”. | Check and repair. Refer to “Self-Diagnostic Function table”. |
5. Erase the malfunction history in the diagnostic mode. Refer to “Sensor operation table (Diagnostic code No. 62)”.  

**NOTE:**

Turning the main switch to “OFF” will not erase the malfunction history.

---

The engine operation is not normal but the engine trouble warning light does not come on.  

1. Check the operation of following sensors and actuators in the Diagnostic mode. Refer to “Sensor operation table” and “Actuator operation table”.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>Throttle position sensor (throttle angle)</td>
</tr>
<tr>
<td>30</td>
<td>Cylinder-#1 ignition coil</td>
</tr>
<tr>
<td>31</td>
<td>Cylinder-#2 ignition coil</td>
</tr>
<tr>
<td>32</td>
<td>Cylinder-#1 ignition coil</td>
</tr>
<tr>
<td>33</td>
<td>Cylinder-#2 ignition coil</td>
</tr>
<tr>
<td>36</td>
<td>Injector #1</td>
</tr>
<tr>
<td>37</td>
<td>Injector #2</td>
</tr>
</tbody>
</table>

If a malfunction is detected in the sensors or actuators, repair or replace all faulty parts. If no malfunction is detected in the sensors and actuators, check and repair inner parts of the engine.

---

**DIAGNOSTIC MODE**

Setting the diagnostic mode

1. Turn the main switch to “OFF” and set the engine stop switch to “

2. Disconnect the wire harness coupler from the fuel pump.

3. Press and hold the “RESET” switch, turn the main switch to “ON”, and continue to press the switch for 8 seconds or more.

---

**NOTE:**

- All displays on the meter disappear except the clock and odometer/trip meter/fuel reserve trip meter/clock displays.
- “dIAG” appears on the odometer/trip meter/fuel reserve trip meter/clock LCD.

4. Simultaneously press the “SELECT” and “RESET” switches for 2 seconds or more to activate the diagnostic mode. The diagnostic code number “d01” appears on the clock LCD.

5. Set the engine stop switch to “

6. Select the diagnostic code number corresponding to the fault code number by pressing the “SELECT” and “RESET” switches.

**NOTE:**

- To decrease the selected diagnostic code number, press the “RESET” switch. Press the “RESET” switch for 1 second or longer to automatically decrease the diagnostic code numbers.
- To increase the selected diagnostic code number, press the “SELECT” switch. Press the “SELECT” switch for 1 second or longer to automatically increase the diagnostic code numbers.
7. Verify the operation of the sensor or actuator.
   • Sensor operation
     The data representing the operating conditions of the sensor appears on the odometer/trip meter/fuel reserve trip meter/clock LCD.
   • Actuator operation
     Set the engine stop switch to “熄火” to operate the actuator.

NOTE:
If the engine stop switch is set to “熄火”, set it to “熄火”, and then set it to “熄火” again.

8. Turn the main switch to “OFF” to cancel the diagnostic mode.

</table>
TROUBLESHOOTING DETAILS
This section describes the measures per fault code number displayed on the meter. Check and service the items or components that are the probable cause of the malfunction following the order given. After the check and service of the malfunctioning part has been completed, reset the meter display according to the reinstatement method.

Fault code No.:
Code number displayed on the meter when the engine failed to work normally. Refer to “Self-Diagnostic Function table”.

Diagnostic code No.:
Diagnostic code number to be used when the diagnostic mode is operated. Refer to “DIAGNOSTIC MODE” on page 7-33.

#### Check or maintenance job

- **A-1 Connections**
  - Speed sensor coupler
  - Main wire harness ECU coupler

- **A-2 Open or short circuit in speed sensor lead.**

- **A-3 Gear for detecting vehicle speed has broken.**

- **A-4 Defective speed sensor.**

#### Reinstatement method

- Starting the engine, and activating the vehicle speed sensor by operating the vehicle at 20 to 30 km/h.

- Replace if defective. Refer to “TRANSMISSION” on page 5-107.

- Execute the diagnostic mode. (Code No.07) Replace if defective. Refer to “CHECKING THE SPEED SENSOR” on page 7-88.
### FUEL INJECTION SYSTEM

| Fault code No. | 42 | Symptom | A. No normal signals are received from the speed sensor.

TROUBLESHOOTING
If the fuel pump fails to operate.

NOTE:
• Before troubleshooting, remove the following part(s):
  1. Rider seat
  2. Tool kit tray
  3. Rider seat bracket assembly
  4. Left side cover
  5. Headlight assembly

1. Check the fuses.
   (Main, fuel injection system, ignition and ECU)
   Refer to “CHECKING THE FUSES” on page 7-75.
   NG → Replace the fuse(s).
   OK ↓

2. Check the battery.
   Refer to “CHECKING AND CHARGING THE BATTERY” on page 7-76.
   NG →
   OK ↓

3. Check the main switch.
   Refer to “CHECKING THE SWITCHES” on page 7-71.
   NG → Replace the main switch.
   OK ↓

4. Check the engine stop switch.
   Refer to “CHECKING THE SWITCHES” on page 7-71.
   NG → The engine stop switch is faulty. Replace the right handlebar switch.
   OK ↓

5. Check the relay unit (fuel pump relay).
   Refer to “CHECKING THE RELAYS” on page 7-79.
   NG → Replace the relay unit.
   OK ↓

6. Check the diode 2.
   Refer to “CHECKING THE DIODES” on page 7-81.
   NG → Replace the diode 2.
   OK ↓

7. Check the fuel pump.
   Refer to “CHECKING THE FUEL PUMP” on page 7-89.
   NG → Replace the fuel pump assembly.
   OK ↓
8. Check the entire fuel pump system wiring. Refer to “CIRCUIT DIAGRAM” on page 7-63.

NG → Properly connect or repair the fuel pump system wiring.

OK ↓ Replace the ECU.
1. Cylinder-#2 right ignition coil
2. Cylinder-#2 left ignition coil
3. Fuel sender
4. Engine temperature sensor

CHECKING THE SWITCHES

Diagram with numbered connections:

1. 1
2. 2
3. 3
4. 4
5. 5
6. 6
7. 7
8. 8
9. 9
10. 10
11. 11
12. 12
13. 13
14. 14

Each connection is labeled with color codes and positions:

- (GRAY)
- (BLACK)
- (BLUE)
- (WHITE)
- (RED)
1. Main switch
2. Engine stop switch
3. Start switch
4. Accessory light switch
5. Reset switch
6. Front brake light switch
7. Neutral switch
8. Sidestand switch
9. Rear brake light switch
10. Clutch switch
11. Horn switch
12. Dimmer switch
13. Select switch
14. Turn signal switch
Check each switch for continuity with the pocket tester. If the continuity reading is incorrect, check the wiring connections and if necessary, replace the switch.

**CAUTION:**

Never insert the tester probes into the coupler terminal slots “a”. Always insert the probes from the opposite end of the coupler, taking care not to loosen or damage the leads.

### Pocket tester

90890-03112
Analog pocket tester
YU-03112-C

**NOTE:**

- Before checking for continuity, set the pocket tester to “0” and to the “Ω × 1” range.
- When checking for continuity, switch back and forth between the switch positions a few times.

The switches and their terminal connections are illustrated as in the following example of the main switch.

The switch positions “a” are shown in the far left column and the switch lead colors “b” are shown in the top row.

The continuity (i.e., a closed circuit) between switch terminals at a given switch position is indicated by “〇—〇”. There is continuity between red and brown, blue/yellow and blue/black when the switch is set to “ON”.

---

---
CHECKING THE BULBS AND BULB SOCKETS

NOTE: Do not check any of the lights that use LEDs.

Check each bulb and bulb socket for damage or wear, proper connections, and also for continuity between the terminals.
Damage/wear → Repair or replace the bulb, bulb socket or both.
Improperly connected → Properly connect.
No continuity → Repair or replace the bulb, bulb socket or both.

Types of bulbs
The bulbs used on this vehicle are shown in the illustration.
- Bulbs “a” and “b” are used for the headlights and usually use a bulb holder that must be detached before removing the bulb. The majority of these types of bulbs can be removed from their respective socket by turning them counterclockwise.
- Bulbs “c” are used for turn signal and tail/brake lights and can be removed from the socket by pushing and turning the bulb counterclockwise.
- Bulbs “d” and “e” are used for meter and indicator lights and can be removed from their respective socket by carefully pulling them out.

Checking the condition of the bulbs
The following procedure applies to all of the bulbs.

1. Remove:
   - Bulb

   **WARNING**
   Since headlight bulbs get extremely hot, keep flammable products and your hands away from them until they have cooled down.

   **CAUTION:**
   - Be sure to hold the socket firmly when removing the bulb. Never pull the lead, otherwise it may be pulled out of the terminal in the coupler.
   - Avoid touching the glass part of a headlight bulb to keep it free from oil, otherwise the transparency of the glass, the life of the bulb, and the luminous flux will be adversely affected. If the headlight bulb gets soiled, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

2. Check:
   - Bulb (for continuity)
     (with the pocket tester)
     No continuity → Replace.

   **NOTE:**
   Before checking for continuity, set the pocket tester to “0” and to the “Ω × 1” range.

   a. Connect the positive tester probe to terminal “1” and the negative tester probe to terminal “2”, and check the continuity.
   b. Connect the positive tester probe to terminal “1” and the negative tester probe to terminal “3”, and check the continuity.
   c. If either of the readings indicate no continuity, replace the bulb.
Checking the condition of the bulb sockets
The following procedure applies to all of the bulb sockets.
1. Check:
   • Bulb socket (for continuity)
     (with the pocket tester)
     No continuity → Replace.

NOTE:
Check each bulb socket for continuity in the same manner as described in the bulb section; however, note the following.

a. Install a good bulb into the bulb socket.
b. Connect the pocket tester probes to the respective leads of the bulb socket.
c. Check the bulb socket for continuity. If any of the readings indicate no continuity, replace the bulb socket.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

NOTE:
Set the pocket tester selector to “Ω x 1”.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

b. If the pocket tester indicates “∞”, replace the fuse.

3. Replace:
   • Blown fuse

CHECKING THE FUSES
The following procedure applies to all of the fuses.

CAUTION:
To avoid a short circuit, always turn the main switch to “OFF” when checking or replacing a fuse.

1. Remove:
   • Rider seat
     Refer to “GENERAL CHASSIS” on page 4-1.
2. Check:
   • Fuse

a. Connect the pocket tester to the fuse and check the continuity.

WARNING
Never use a fuse with an amperage rating other than that specified. Improvising or using a fuse with the wrong amperage rating may cause extensive damage to the electri-
cal system, cause the lighting and ignition systems to malfunction and could possibly cause a fire.

4. Install:
- Rider seat
  Refer to “GENERAL CHASSIS” on page 4-1.

CHECKING AND CHARGING THE BATTERY

WARNING
Batteries generate explosive hydrogen gas and contain electrolyte which is made of poisonous and highly caustic sulfuric acid. Therefore, always follow these preventive measures:
- Wear protective eye gear when handling or working near batteries.
- Charge batteries in a well-ventilated area.
- Keep batteries away from fire, sparks or open flames (e.g., welding equipment, lighted cigarettes).
- DO NOT SMOKE when charging or handling batteries.
- KEEP BATTERIES AND ELECTROLYTE OUT OF REACH OF CHILDREN.
- Avoid bodily contact with electrolyte as it can cause severe burns or permanent eye injury.
FIRST AID IN CASE OF BODILY CONTACT:
EXTERNAL
- Skin — Wash with water.
- Eyes — Flush with water for 15 minutes and get immediate medical attention.
INTERNAL
- Drink large quantities of water or milk followed with milk of magnesia, beaten egg or vegetable oil. Get immediate medical attention.

CAUTION: This is a sealed battery. Never remove the sealing caps because the balance between cells will not be maintained and battery performance will deteriorate.
- Charging time, charging amperage and charging voltage for an MF battery are different from those of conventional batteries. The MF battery should be charged according to the instructions for the charging method. If the battery is overcharged, the electrolyte level will drop considerably. Therefore, take special care when charging the battery.

NOTE:
Since MF batteries are sealed, it is not possible to check the charge state of the battery by measuring the specific gravity of the electrolyte. Therefore, the charge of the battery has to be checked by measuring the voltage at the battery terminals.

1. Remove:
- Rider seat
  Refer to “GENERAL CHASSIS” on page 4-1.
2. Remove:
- ECU band “1”

3. Remove:
- Coupler tray “1”

4. Disconnect:
- Battery leads
  (from the battery terminals)

CAUTION:
First, disconnect the negative battery lead “1”, and then positive battery lead “2”.

EC1D71020
EC1A13840
5. Remove:
   • Battery

6. Check:
   • Battery charge

   a. Connect a pocket tester to the battery terminals.

   • Positive tester probe → positive battery terminal
   • Negative tester probe → negative battery terminal

**NOTE:**

- The charge state of an MF battery can be checked by measuring its open-circuit voltage (i.e., the voltage when the positive battery terminal is disconnected).
- No charging is necessary when the open-circuit voltage equals or exceeds 12.8 V.

b. Check the charge of the battery, as shown in the charts and the following example.

**Example**

- Open-circuit voltage = 12.0 V
- Charging time = 6.5 hours
- Charge of the battery = 20–30%

**A. Open-circuit voltage (V)**
**B. Charging condition of the battery (%)**
**C. Ambient temperature 20 °C (68 °F)**

---

**WARNING**

Do not quick charge a battery.

**CAUTION:**

- Never remove the MF battery sealing caps.
- Do not use a high-rate battery charger since it forces a high-amperage current into the battery quickly and can cause battery overheating and battery plate damage.
- If it is impossible to regulate the charging current on the battery charger, be careful not to overcharge the battery.
- When charging a battery, be sure to remove it from the vehicle. (If charging has to be done with the battery mounted on the vehicle, disconnect the negative battery lead from the battery terminal.)
- To reduce the chance of sparks, do not plug in the battery charger until the battery charger leads are connected to the battery.
- Before removing the battery charger lead clips from the battery terminals, be sure to turn off the battery charger.
- Make sure the battery charger lead clips are in full contact with the battery terminal and that they are not shorted. A corroded battery charger lead clip may generate heat in the contact area and a weak clip spring may cause sparks.

---

**D. These values vary with the temperature, the condition of the battery plates, and the electrolyte level.**
If the battery becomes hot to the touch at any time during the charging process, disconnect the battery charger and let the battery cool before reconnecting it. Hot batteries can explode!

As shown in the following illustration, the open-circuit voltage of an MF battery stabilizes about 30 minutes after charging has been completed. Therefore, wait 30 minutes after charging is completed before measuring the open-circuit voltage.

### Charging method using a variable-current (voltage) charger

a. Measure the open-circuit voltage prior to charging.

**NOTE:**
Voltage should be measured 30 minutes after the engine is stopped.

b. Connect a charger and ammeter to the battery and start charging.

**NOTE:**
Set the charging voltage at 16–17 V. If the setting is lower, charging will be insufficient. If too high, the battery will be over-charged.

c. Make sure that the current is higher than the standard charging current written on the battery.

**NOTE:**
If the current is lower than the standard charging current written on the battery, set the charging voltage adjust dial at 20–24 V and monitor the amperage for 3–5 minutes to check the battery.

d. Adjust the voltage so that the current is at the standard charging level.

e. Set the time according to the charging time suitable for the open-circuit voltage.

f. If charging requires more than 5 hours, it is advisable to check the charging current after a lapse of 5 hours. If there is any change in the amperage, re-adjust the voltage to obtain the standard charging current.

g. Measure the battery open-circuit voltage after leaving the battery unused for more than 30 minutes.

12.8 V or more --- Charging is complete.
12.7 V or less --- Recharging is required.
Under 12.0 V --- Replace the battery.

### Charging method using a constant voltage charger

a. Measure the open-circuit voltage prior to charging.

**NOTE:**
Voltage should be measured 30 minutes after the engine is stopped.

b. Connect a charger and ammeter to the battery and start charging.

c. Make sure that the current is higher than the standard charging current written on the battery.

**NOTE:**
If the current is lower than the standard charging current written on the battery, this type of battery charger cannot charge the MF battery. A variable voltage charger is recommended.

d. Charge the battery until the battery’s charging voltage is 15 V.

**NOTE:**
Set the charging time at 20 hours (maximum).

e. Measure the battery open-circuit voltage after leaving the battery unused for more than 30 minutes.
8. Install:
   • Battery
9. Connect:
   • Battery leads
     (to the battery terminals)

CAUTION:
First, connect the positive battery lead “1”, and then the negative battery lead “2”.

NOTE:
Be sure to route the negative battery lead towards the front of the vehicle and to install the negative terminal cover “3” securely.

10. Check:
    • Battery terminals
      Dirt → Clean with a wire brush.
      Loose connection → Connect properly.

11. Lubricate:
    • Battery terminals

12. Install:
    • Coupler tray
    • ECU band

NOTE:
Make sure the leads are routed correctly.

13. Install:
    • Rider seat
      Refer to “GENERAL CHASSIS” on page 4-1.

CHECKING THE RELAYS
Check each switch for continuity with the pocket tester. If the continuity reading is incorrect, replace the relay.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

1. Disconnect the relay from the wire harness.
2. Connect the pocket tester (Ω × 1) and battery (12 V) to the relay terminals as shown.
   Check the relay operation.
   Out of specification → Replace.

Starter relay

1. Positive battery terminal
2. Negative battery terminal
3. Positive tester probe
4. Negative tester probe

Relay unit (starting circuit cut-off relay)

Result
Continuity
(between “3” and “4”)

Recommended lubricant
Dielectric grease

12.8 V or more --- Charging is complete.
12.7 V or less --- Recharging is required.
Under 12.0 V --- Replace the battery.
Relay unit (fuel pump relay)

1. Positive battery terminal  
2. Negative battery terminal  
3. Positive tester probe  
4. Negative tester probe

Headlight relay

1. Positive battery terminal  
2. Negative battery terminal  
3. Positive tester probe  
4. Negative tester probe

CHECKING THE TURN SIGNAL RELAY

1. Check:  
   • Turn signal relay input voltage  
     Out of specification → The wiring circuit from the main switch to the turn signal relay coupler is faulty and must be repaired.

   a. Connect the pocket tester (DC 20 V) to the turn signal relay terminal as shown.

  甚至连
   Pocket tester  
   90890-03112  
   Analog pocket tester  
   YU-03112-C

   • Positive tester probe → brown “1”  
   • Negative tester probe → ground

   b. Turn the main switch to “ON”.  
   c. Measure the turn signal relay input voltage.

  甚至连
   Turn signal relay input voltage  
   DC 12 V

  甚至连
   b. Connect the pocket tester (DC 20 V) to the turn signal relay terminal as shown.

  甚至连

   YU-03112-C

   • Positive tester probe → brown/white “1”, yellow/red “2” or white/yellow “3”  
   • Negative tester probe → ground
CHECKING THE DIODES

Relay unit (diode)

1. Check:
   • Relay unit (diode)
     Out of specification → Replace.

NOTE:

The pocket tester or the analog pocket tester readings are shown in the following table.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

Continuity
  Positive tester probe → sky blue “1”
  Negative tester probe → black/yellow “2”

No continuity
  Positive tester probe →
  black/yellow “2”
  Negative tester probe → sky blue “1”

Continuity
  Positive tester probe → sky blue “1”
  Negative tester probe → blue/yellow “3”

No continuity
  Positive tester probe →
  blue/yellow “3”
  Negative tester probe → sky blue “1”

Continuity
  Positive tester probe → sky blue
  blue/white “4”
  Negative tester probe → sky blue/white “4”

No continuity
  Positive tester probe → sky blue/white “4”
  Negative tester probe → sky blue “1”

Continuity
  Positive tester probe → blue/green “5”
  Negative tester probe →
  blue/yellow “3”

No continuity
  Positive tester probe →
  blue/yellow “3”
  Negative tester probe → blue/green “5”

a. Disconnect the relay unit from the wire harness.
b. Connect the pocket tester (Ω × 1) to the relay unit terminals as shown.
c. Check the relay unit (diode) for continuity.
d. Check the relay unit (diode) for no continuity.

Diode 1
1. Check:
   • Diode 1
     Out of specification → Replace.

Diode 2
1. Check:
   • Diode 2
     Out of specification → Replace.

Diode 1
1. Check:
   • Diode 1
     Out of specification → Replace.

Diode 2
1. Check:
   • Diode 2
     Out of specification → Replace.

ET1D71012
CHECKING THE IGNITION SPARK GAP
1. Check:
   • Ignition spark gap
     Out of specification → Perform the ignition system troubleshooting, starting with step 5.
     Refer to “TROUBLESHOOTING” on page 7-4.

Pocket tester
90890-03112

Minimum ignition spark gap
6.0 mm (0.24 in)

NOTE:
If the ignition spark gap is within specification, the ignition system circuit is operating normally.
a. Disconnect the spark plug cap from the spark plug.
b. Connect the ignition checker “1” as shown.

c. Measure the spark plug cap resistance.

CHECKING THE SPARK PLUG CAPS
The following procedure applies to all of the spark plug caps.
1. Check:
   • Spark plug cap resistance
     Out of specification → Replace.

   Spark plug cap

   Resistance
   10.0 kΩ

   a. Remove the spark plug cap from the spark plug lead.
b. Connect the pocket tester (Ω × 1) to the spark plug cap as shown.

   Pocket tester
   90890-03112
   Analog pocket tester
   YU-03112-C

c. Measure the primary coil resistance.

CHECKING THE IGNITION COILS
The following procedure applies to all of the ignition coils.
1. Check:
   • Primary coil resistance
     Out of specification → Replace.

   Primary coil resistance
   2.16–2.64 Ω

   a. Disconnect the ignition coil connectors from the ignition coil terminals.
b. Connect the pocket tester (Ω × 1) to the ignition coil as shown.

   Pocket tester
   90890-03112
   Analog pocket tester
   YU-03112-C

   • Positive tester probe → black/red “1”
   • Negative tester probe → orange or gray/red “2”

c. Measure the primary coil resistance.

2. Check:
   • Secondary coil resistance
     Out of specification → Replace.

c. Turn the lean angle sensor to 65°.
d. Measure the lean angle sensor output voltage.

ELECTRICAL COMPONENTS

CHECKING THE STARTER MOTOR OPERATION
1. Check:
   • Starter motor operation
     Does not operate → Perform the electric starting system troubleshooting, starting with step 5.
     Refer to “TROUBLESHOOTING” on page 7-11.

a. Connect the positive battery terminal “1” and starter motor lead “2” with a jumper lead “3”.

**WARNING**
- A wire that is used as a jumper lead must have at least the same capacity of the battery lead, otherwise the jumper lead may burn.
- This check is likely to produce sparks, therefore, make sure no flammable gas or fluid is in the vicinity.

b. Measure the stator coil resistance.

CHECKING THE STATOR COIL
1. Disconnect:
   • Stator coil coupler
     (from the rectifier/regulator)
2. Check:
   • Stator coil resistance
     Out of specification → Replace the stator coil.

<table>
<thead>
<tr>
<th>Stator coil resistance</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.112–0.168 Ω</td>
</tr>
</tbody>
</table>

a. Connect the pocket tester (Ω × 1) to the stator coil coupler as shown.

**Pocket tester**
90890-03112
Analog pocket tester
YU-03112-C

- Positive tester probe → white “1”
- Negative tester probe → white “2”
- Positive tester probe → white “1”
- Negative tester probe → white “3”

b. Check the starter motor operation.

CHECKING THE RECTIFIER/REGULATOR
1. Check:
   • Charging voltage
     Out of specification → Replace the rectifier/regulator.
CHECKING THE HORNS

1. Check:
   • Horn resistance
     Out of specification → Replace.

2. Check:
   • Horn sound
     Faulty sound → Adjust or replace.

a. Connect a battery (12 V) to the horn.
b. Turn the adjusting screw in direction “a” or “b”
   until the horn sound is obtained.
CHECKING THE ENGINE TEMPERATURE SENSOR

1. Remove:
   • Engine temperature sensor
     (from the front cylinder head)

   **WARNING**
   • Handle the engine temperature sensor with special care.
   • Never subject the engine temperature sensor to strong shocks. If the engine temperature sensor is dropped, replace it.

2. Check:
   • Engine temperature sensor resistance
     Out of specification → Replace.

   **Engine temperature sensor resistance**
   0.90–1.10 kΩ at 100 °C (212 °F)

3. Install:
   • Engine temperature sensor

   **Engine temperature sensor**
   20 Nm (2.0 m·kg, 14 ft·lb)

CHECKING THE FUEL SENDER (FUEL TANK)

1. Remove:
   • Fuel sender
     (from the fuel tank)

2. Check:
   • Fuel sender resistance
     Out of specification → Replace.

   **Fuel sender (fuel tank)**
   Sender unit resistance (full) 9–11 Ω
   Sender unit resistance (empty) 213–219 Ω

3. Install:
   • Fuel sender

   **Fuel sender**
   Sender unit resistance (full) 9–11 Ω
   Sender unit resistance (empty) 213–219 Ω

   a. Connect the pocket tester (Ω × 1 k) to the fuel sender coupler as shown.

   **Pocket tester**
   90890-03112
   Analog pocket tester
   YU-03112-C
b. Move the fuel sender float to maximum “3”/minimum “4” level position.

c. Measure the fuel sender resistance.

CHECKING THE FUEL SENDER (FUEL PUMP)
1. Drain the fuel.
2. Disconnect:
   • Fuel pump coupler (from the fuel pump)
3. Remove:
   • Fuel pump (from the sub-fuel tank)
4. Check:
   • Fuel sender resistance
     Out of specification → Replace the fuel pump assembly.

Fuel sender resistance
0.90–2.05 kΩ

a. Connect the pocket tester (Ω × 1) to the fuel sender terminals as shown.

Pocket tester
90890-03112
Analog pocket tester
YU-03112-C

b. Measure the fuel sender resistance.

CHECKING THE FUEL LEVEL WARNING LIGHT
This model is equipped with a self-diagnosis device for the fuel level detection circuit.

1. Check:
   • Fuel level warning light “1”
     (Turn the main switch to “ON”.)
     Warning light comes on for a few seconds, then goes off → Warning light is OK.
     Warning light does not come on → Replace the meter assembly.
     Warning light flashes eight times, then goes off for three seconds in a repeated cycle (malfunction detected in fuel sender or thermistor)
     → Replace the fuel pump assembly.

CHECKING THE SPEED SENSOR
1. Check:
   • Speed sensor output voltage
     Out of specification → Replace.

Output voltage reading cycle
0.6 V to 4.8 V to 0.6 V to 4.8 V

Output voltage reading cycle
0.6 V to 4.8 V to 0.6 V to 4.8 V

a. Connect the pocket tester (DC 20 V) to the speed sensor coupler as shown.

**CHECKING THE FUEL PUMP**

**WARNING**

Gasoline is extremely flammable and under certain circumstances there can be a danger of an explosion or fire. Be extremely careful and note the following points:

- Stop the engine before refueling.
- Do not smoke, and keep away from open flames, sparks, or any other source of fire.
- If you do accidentally spill gasoline, wipe it up immediately with dry rags.
- If gasoline touches the engine when it is hot, a fire may occur. Therefore, make sure the engine is completely cool before performing the following test.

1. Disconnect:
   - Fuel pump coupler (from the fuel pump)
2. Check:
   - Fuel pump operation
     Faulty/rough movement → Replace.

---

**Pocket tester**

90890-03112

d. Check the fuel pump operation.

CHECKING THE EXUP SERVO MOTOR
1. Check:
   • EXUP servo motor operation
     Out of specification → Replace.

   a. Disconnect the EXUP cables from the EXUP servo motor pulley.
   b. Disconnect the EXUP servo motor coupler from the wire harness.
   c. Connect the battery leads to the EXUP servo motor terminals as shown.

   For counterclockwise rotation “a”
   • Positive battery lead → black/green “1”
   • Negative battery lead → black/red “2”

   For clockwise rotation “b”
   • Positive battery lead → black/red “2”
   • Negative battery lead → black/green “1”

   d. Check that the EXUP servo motor pulley rotates several times in directions “a” and “b”.

   CAUTION:
   ECA14390
   To prevent damaging the EXUP servo motor, perform this test within a few seconds of connecting the battery.

CHECKING THE INTAKE AIR PRESSURE SENSOR
The following procedure applies to both of the intake air pressure sensors.
1. Check:
   • Intake air pressure sensor output voltage
     Out of specification → Replace.

   a. Connect the pocket tester (DC 20 V) to the intake air pressure sensor coupler as shown.

   b. Turn the main switch to “ON”.
   c. Measure the intake air pressure sensor output voltage.

CHECKING THE AIR TEMPERATURE SENSOR
1. Remove:
   • Air temperature sensor
WARNING
• Handle the air temperature sensor with special care.
• Never subject the air temperature sensor to strong shocks. If the air temperature sensor is dropped, replace it.

2. Check:
• Air temperature sensor resistance
  Out of specification → Replace.

<table>
<thead>
<tr>
<th>Air temperature sensor resistance</th>
</tr>

TROUBLESHOOTING

GENERAL INFORMATION

NOTE: The following guide for troubleshooting does not cover all the possible causes of trouble. It should be helpful, however, as a guide to basic troubleshooting. Refer to the relative procedure in this manual for checks, adjustments, and replacement of parts.

STARTING FAILURES

Engine
1. Cylinder(s) and cylinder head(s)
   • Loose spark plug
   • Loose cylinder head or cylinder
   • Damaged cylinder head gasket
   • Damaged cylinder gasket
   • Worn or damaged cylinder
   • Incorrect valve clearance
   • Improperly sealed valve
   • Incorrect valve-to-valve-seat contact
   • Incorrect valve timing
   • Faulty valve spring
   • Seized valve
2. Piston(s) and piston ring(s)
   • Improperly installed piston ring
   • Damaged, worn or fatigued piston ring
   • Seized piston ring
   • Seized or damaged piston
3. Air filter
   • Improperly installed air filter
   • Clogged air filter element
4. Crankcase and crankshaft
   • Improperly assembled crankcase
   • Seized crankshaft

Fuel system
1. Fuel tank
   • Empty fuel tank
   • Clogged fuel filter
   • Clogged fuel tank overflow/breather hose
   • Clogged rollover valve
   • Clogged rollover valve hose
   • Deteriorated or contaminated fuel
2. Fuel pump
   • Faulty fuel pump
   • Faulty relay unit (fuel pump relay)
3. Throttle body(-ies)
   • Deteriorated or contaminated fuel

Electrical system
1. Battery
   • Discharged battery
   • Faulty battery
2. Fuse(s)
   • Blown, damaged or incorrect fuse
   • Improperly installed fuse
3. Spark plug(s)
   • Incorrect spark plug gap
   • Incorrect spark plug heat range
   • Fouled spark plug
   • Worn or damaged electrode
   • Worn or damaged insulator
   • Faulty spark plug cap
4. Ignition coil(s)
   • Cracked or broken ignition coil body
   • Broken or shorted primary or secondary coils
   • Faulty spark plug lead
5. Ignition system
   • Faulty ECU
   • Faulty crankshaft position sensor
   • Broken generator rotor woodruff key
6. Switches and wiring
   • Faulty main switch
   • Faulty engine stop switch
   • Broken or shorted wiring
   • Faulty neutral switch
   • Faulty start switch
   • Faulty sidestand switch
   • Faulty clutch switch
   • Improperly grounded circuit
   • Loose connections
7. Starting system
   • Faulty starter motor
   • Faulty starter relay
   • Faulty relay unit (starting circuit cut-off relay)
   • Faulty starter clutch

INCORRECT ENGINE IDLING SPEED

Engine
1. Cylinder(s) and cylinder head(s)
   • Incorrect valve clearance
   • Damaged valve train components
2. Air filter
   • Clogged air filter element

Fuel system
1. Throttle body(-ies)
   • Damaged or loose throttle body joint
   • Improperly synchronized throttle bodies
• Improper throttle cable free play
• Flooded throttle body

**Electrical system**
1. Battery
   • Discharged battery
   • Faulty battery
2. Spark plug(s)
   • Incorrect spark plug gap
   • Incorrect spark plug heat range
   • Fouled spark plug
   • Worn or damaged electrode
   • Worn or damaged insulator
   • Faulty spark plug cap
3. Ignition coil(s)
   • Broken or shorted primary or secondary coils
   • Faulty spark plug lead
   • Cracked or broken ignition coil
4. Ignition system
   • Faulty ECU
   • Faulty crankshaft position sensor
   • Broken generator rotor woodruff key

**POOR MEDIUM AND HIGH-SPEED PERFORMANCE**
Refer to “STARTING FAILURES” on page 8-1.

**Engine**
1. Air filter
   • Clogged air filter element

**Fuel system**
1. Fuel pump
   • Faulty fuel pump

**FAULTY GEAR SHIFTING**
Shifting is difficult
Refer to “Clutch drags”.

**SHIFT PEDAL DOES NOT MOVE**
Shifft shaft
• Improperly adjusted shift rod
• Bent shift shaft

**Transmission**
• Seized transmission gear
• Foreign object between transmission gears
• Improperly assembled transmission

**JUMPS OUT OF GEAR**
Shift shaft
• Incorrect shift pedal position
• Improperly returned stopper lever

Shift forks
• Worn shift fork

Shift drum
• Incorrect axial play
• Worn shift drum groove

Transmission
• Worn gear dog

**FAULTY CLUTCH**

**Clutch slips**
1. Clutch
   • Improperly assembled clutch
   • Improperly assembled clutch master cylinder
   • Improperly assembled clutch release cylinder
   • Incorrect clutch fluid level
   • Damaged clutch hose
   • Loose or fatigued clutch spring
   • Loose union bolt
   • Worn friction plate
   • Worn clutch plate
   • Damaged clutch release cylinder
2. Engine oil
   • Incorrect oil level
   • Incorrect oil viscosity (low)
   • Deteriorated oil

**Clutch drags**
1. Clutch
   • Air in hydraulic clutch system
   • Unevenly tensioned clutch springs
   • Warped pressure plate
   • Bent clutch plate
   • Swollen friction plate
   • Bent clutch push rod
   • Damaged clutch boss
   • Burnt primary driven gear bushing
   • Damaged clutch release cylinder
   • Match marks not aligned
2. Engine oil
   • Incorrect oil level
   • Incorrect oil viscosity (high)
   • Deteriorated oil

EAS28630
OVERHEATING

Engine
1. Cylinder head(s) and piston(s)
   • Heavy carbon buildup
2. Engine oil
   • Incorrect oil level
   • Incorrect oil viscosity
   • Inferior oil quality

Fuel system
1. Throttle body(-ies)
   • Faulty throttle body(-ies)
   • Damaged or loose throttle body joint
2. Air filter
   • Clogged air filter element

Chassis
1. Brake(s)
   • Dragging brake

Electrical system
1. Spark plug(s)
   • Incorrect spark plug gap
   • Incorrect spark plug heat range
2. Ignition system
   • Faulty ECU

EAS28660
POOR BRAKING PERFORMANCE
• Worn brake pad
• Worn brake disc
• Air in hydraulic brake system
• Leaking brake fluid
• Faulty brake caliper kit
• Faulty brake caliper seal
• Loose union bolt
• Damaged brake hose
• Oil or grease on the brake disc
• Oil or grease on the brake pad
• Incorrect brake fluid level

EAS28660
FAULTY FRONT FORK LEGS

Leaking oil
• Bent, damaged or rusty inner tube
• Cracked or damaged outer tube
• Improperly installed oil seal

• Damaged oil seal lip
• Incorrect oil level (high)
• Loose damper rod assembly bolt
• Damaged damper rod assembly bolt copper washer
• Cracked or damaged cap bolt O-ring

Malfunction
• Bent or damaged inner tube
• Bent or damaged outer tube
• Damaged fork spring
• Worn or damaged outer tube bushing
• Bent or damaged damper rod
• Incorrect oil viscosity
• Incorrect oil level

EAS28670
UNSTABLE HANDLING
1. Handlebar
   • Bent or improperly installed handlebar
2. Steering head components
   • Improperly installed upper bracket
   • Improperly installed lower bracket (improperly tightened ring nut)
   • Bent steering stem
   • Damaged ball bearing or bearing race
3. Front fork leg(s)
   • Uneven oil levels (both front fork legs)
   • Unevenly tensioned fork spring (both front fork legs)
   • Broken fork spring
   • Bent or damaged inner tube
   • Bent or damaged outer tube
4. Swingarm
   • Worn bearing or bushing
   • Bent or damaged swingarm
5. Rear shock absorber assembly
   • Faulty rear shock absorber spring
   • Leaking oil or gas
6. Tire(s)
   • Uneven tire pressures (front and rear)
   • Incorrect tire pressure
   • Uneven tire wear
7. Wheel(s)
   • Incorrect wheel balance
   • Deformed cast wheel
   • Damaged wheel bearing
   • Bent or loose wheel axle
   • Excessive wheel runout
8. Frame
   • Bent frame
   • Damaged steering head pipe
   • Improperly installed bearing race
EAS28710

FAULTY LIGHTING OR SIGNALING SYSTEM

Headlight does not come on
- Wrong headlight bulb
- Too many electrical accessories
- Hard charging
- Incorrect connection
- Improperly grounded circuit
- Poor contacts (main switch)
- Burnt-out headlight bulb

Headlight bulb burnt out
- Wrong headlight bulb
- Faulty battery
- Faulty rectifier/regulator
- Improperly grounded circuit
- Faulty main switch
- Headlight bulb life expired

Tail/brake light does not come on
- Wrong tail/brake light LED
- Too many electrical accessories
- Incorrect connection
- Burnt-out tail/brake light LED

Tail/brake light LED burnt out
- Wrong tail/brake light LED
- Faulty battery
- Incorrectly adjusted rear brake light switch
- Tail/brake light LED life expired

Turn signal does not come on
- Faulty turn signal switch
- Faulty turn signal relay
- Burnt-out turn signal bulb
- Incorrect connection
- Damaged or faulty wire harness
- Improperly grounded circuit
- Faulty battery
- Blown, damaged or incorrect fuse

Turn signal flashes slowly
- Faulty turn signal relay
- Faulty main switch
- Faulty turn signal switch
- Incorrect turn signal bulb

Turn signal remains lit
- Faulty turn signal relay
- Burnt-out turn signal bulb

Turn signal flashes quickly
- Incorrect turn signal bulb

Horn does not sound
- Improperly adjusted horn
- Damaged or faulty horn
- Faulty main switch
- Faulty horn switch
- Faulty battery
- Blown, damaged or incorrect fuse
- Faulty wire harness
